Introduction

If someone had told me a few years ago that they were drinking their own urine, I would have thought they were nuts or deviant. If he also claimed to me that he injects his own urine or the urine of a child or a pregnant woman with the help of an enema, I would consider him doubly deviant. Most of you who open this book will probably think the same. However, I firmly believe that when you finish reading it, you will change your opinion not only about me, but also about the thousand-year-old method of healing with urine, or urinotherapy.

I first encountered this method in Russia, where I worked as an interpreter for various expeditions and later, after the Great Velvet November Revolution, as the first secretary for culture in the Czechoslovak Republic. embassy in Moscow. There I experienced a situation similar to the one that exists in our country today, but in a much harsher version: an absolute lack of cheap drugs and the lack of interest of doctors to treat for a pittance. Ordinary people then had no choice but to reach for folk remedies, to become their own healers.

One of the folk methods that has a huge tradition in Russia and in the East in general is urine therapy. In Russia, it is possible not only among healers, but also among ordinary people to talk quite openly about urine healing. This topic is still taboo here. When I briefly outlined the possibilities of urine therapy in response to a friend's wife's question, I was told, half jokingly and half seriously: "We'd rather not invite that person to dinner."

Enemas are the same taboo as urine in the Czech Republic. Even though I personally, after several years of applying enemas and urine therapy, came to the conclusion that cleansing and healing enemas with urine (own fresh, quarter urine, children's, pregnancy, activated by cold, etc.) are the best healing method ever invented by mankind. With a method that repels 99 percent of diseases, it exceptionally strengthens the body's defenses, adjusts the activity of our glands with clockwork precision, and in a natural way, without the use of dangerous hormonal drugs with many side effects, keeps our hormonal system in ideal condition.

If you add other urinotherapy practices, such as applying compresses with urine (preferably clay ones), fasting on water and urine, using urine as a homeopathic remedy or in a bath, you get an ideal remedy that is free and always within reach, absolutely reliable and harmless, because urine, as you will see, comes from your blood and has almost the same composition as blood plasma.

If you combine urine therapy with the program of seven cleansing steps that I describe in my book "Doctor Yourself", then you have a chance to cure even such severe and chronic diseases as psoriasis, eczema, diabetes, atherosclerosis, high blood pressure and even cancer.

I recently relocated for work to Sana'a, the capital of Yemen: late medieval, minimal sanitary conditions, 2,600 meters above sea level, lack of oxygen by about one quarter (you boil potatoes here for an hour and scratches take a month to heal), strong sunlight, stray ions, large mental strain and I don't know what else. If I don't count the ban on alcohol consumption, the great popularity of chewing khat (a weaker variety of marijuana) and eternally veiled and unavailable women. Because I try to get to know as much as possible, I don't separate myself from local people at all (including women), I eat and drink from the street if I feel like it, I don't refuse invitations to sit next to the executioners, and I use the sun as much as I can. I have tamed the stray ions so that one of them lies at my feet as I write. I call him Abdul. Otherwise, every morning a large Russian cockroach greets me in the kitchen, whom I call Serjožo familiarly, it reminds me of my stay in Russia. Fortunately, there is no Glafýra bug, which often woke me up in Moscow.

I just want to say, completely without jokes, that by regularly using urine in an enema, internally, to wash the nose and eyes, in the bath and after shaving, I definitely broke the superstitions about the difficult transition of a European to tropical or other hostile countries. Although I have to admit that the attack of various viruses and microbes, unknown to us and

all the more dangerous, was really hard during the first months of our stay. But thanks to urinothrapy and local medicines (habbasoda - black seed and karkade - hibiscus) I overcame a very unpleasant food poisoning in two days (I got poisoned in the best local hotel) and in a similar way I cured the ugly shingles all over my face until I went to sleep severe headaches. I didn't take a single pill with me and I haven't recognized doctors for several years.

My favorite writer Mr. Hrabal somewhere mentions a teacher who hid rodents from his students only because his salary was not increased. I think it would be a great pity if various taboos, stupidity and prejudices pushed out such an excellent medicine, which was already called the drink of the gods by the Indians five thousand years ago.

Urine therapy is discussed in many spiritual and medical books. It is already said in the Bible: "You have left the fountain of living waters to dig leaky cisterns that hold no water." Saint John says in the New Testament: "Whoever believes in me, as the scripture says, rivers of living water will flow from his belly." Urine is also mentioned as an important medicine by the famous Persian-Tajik physician and philosopher Avicenna in his Canon of Medical Science in II. century AD.

However, we are most interested in the oldest and most extensive book on urinothrapy - Shivambukalpa, whose name translates as The Practice of Using Urine for Body Renewal. This book consists of 107 verses and is part of the exquisite Damar Tantra. It talks about the fact that only urine purifies a person and is heavenly nectar for him. It gives him strength, cures diseases and banishes old age. Urine, shivambu in Hindi, is the basis of all medicines. To this day, Buddhist monks are only allowed to use their own urine as the only medicine. It is also a medicine for the brave. In addition, a person who wants to achieve success in the application of urinothrapy must renounce salty, bitter and spicy food, eat easily digestible food in small quantities, must not exert too much physical effort, must control his emotions and sleep on the bare ground.

Purification of the body and the correct technique of using urine leads to the cure of congenital diseases within one month and completely cleanses the insides. After two months, the senses become significantly clearer. After three, all diseases subside. After seven one becomes extremely strong and intelligent, after eight one shines like gold, etc.

Even in today's India, many adepts of gurus or teachers of the East regularly drink urine. At the same time, they walk almost naked and are never sick. According to them, urine is more nutritious than milk. One of the conquerors of Mount Everest, Morris Wilson, attributed his extraordinary health and strength mainly to fasting associated with drinking urine and massaging his entire body with his own urine. He took these methods from Tibetan lamas and Indian yogis.

Records from the tsarist archives testify to the extraordinary effects of the combination of starvation and urinothrapy, where it is written about settlements in Siberia, when people ate practically nothing, only drank their own urine. They were never sick and had a healthy skin color.

I too, after several years of applying cleansing peels and urine therapy, switched to only one meal a day, like in Babylon or ancient Greece. My organism is clean and therefore energy can flow freely, urine therapy exceptionally increases not only my energy, but also my defenses, and it also suppresses my appetite. Only in the morning I prepare a vitamin bomb every day from papaya, oranges, raisins, carrots, apples, etc. I drink half a liter of juice in the morning and half in the evening. Otherwise, I usually treat myself to a bottle of wine or a few glasses of cognac in the evening, when with the help of urine therapy I can easily suppress the feeling of hunger. Once a week, at a social party, I enjoy a moderate amount of some goodies, e.g. fish, crabs, shrimps, or a piece of chicken. Yemeni vegetable specialties are also excellent. The next day, however, I will do a thorough cleansing of the entire body. In two months in Yemen, I lost 6 kilograms,

which is a clear proof that urine therapy has a great effect on weight loss and is essentially irreplaceable. So if I've convinced you just a little with my introduction, read on. Although many will oppose your feelings and established prejudices, I believe that at the end of the book you will agree with me, and many of you will at least try urine therapy, this miraculous treatment that is coming back to us from the depths of the millennium.

How is urine produced?

Urine, or urine, is a liquid product of the excretion of a living organism, which is formed in the kidneys and exits through the urinary tract system. In 24 hours, a person produces 800-1800 milliliters of urine, which is on average 50-80 percent of the fluids taken. Normally, more urine is excreted during the day than at night, on average in a ratio of 4:1. The functional unit of the kidney that produces urine is the nephron. The number of nephrons in both kidneys reaches two million. The total surface of the inner layer of nephrons, through which urine is filtered, is 5 to 8 square meters, which is two to three times the surface of the body.

In the nephrons, urine is formed as a result of four processes: filtration, reabsorption, secretion and osmotic concentration.

F i l t r a c e - takes place in the initial part of the nephron, where the blood flows under a much higher pressure than in all other capillaries. This is explained by the fact that the inlet arteriole is approximately 30 percent larger in diameter than the outlet arteriole. This excess pressure allows the glomerulus to filter out hemoglobin and blood proteins, or blood colloids. So primal urine enters, which contains the same substances as blood plasma. Sugar, salts, urea, amino acids and everything that is normally contained in the blood or is artificially introduced into it are found in the same concentration in the original urine.

R e a b s o r b c e - begins in the renal canal after the exit of primary urine from the glomerulus. The canal is washed with blood, which, due to saturation with hemoglobin and proteins, significantly changes its osmotic pressure. The result is a pressure difference between the blood washing the canal and the original urine inside it. Thanks to this, the diffusion of water from the area of lower osmotic pressure to the area of higher pressure begins through the epithelium (lining) of the canal, which functions as a semi-permeable membrane. Together with water, a number of substances that were originally dissolved in the blood are absorbed into the blood. This is how passive reabsorption takes place. In addition to it, there is an active transfer of substances needed by the organism from primary urine to the blood. This process requires a lot of energy and therefore kidney tissue consumes more energy than heart tissue. Sodium chloride, or table salt, undergoes the greatest reabsorption. In 24 hours, the renal tubules reabsorb about 1,200 grams of sodium chloride from the original urine. Therefore, for example, reducing salt intake lowers blood pressure.

S e k r e c e - it is carried out by the cells of the kidney channels through the active selective transfer of substances useful for the organism (amino acids, vitamins, phosphates, glucose) from primary urine back to the blood and unnecessary and harmful substances (medicines and dyes) from the blood to the urine. However, this process only occurs if the passages to the blood are not clogged with cholesterol plugs and calcium deposits.

O s m o t i c k é k o n c e n t r o v á n í m o č i - takes place on the basis of a special mechanism, where there is a concentration of salts (sodium and chlorine ions) starting from the outer layers of the kidney inwards. The original urine thus passes through the layers of the kidneys with an increasing concentration of table salt and passes water to these layers by osmosis (seepage). At the same time, it concentrates and decreases in volume. Out of 130 milliliters of initial urine, only 1 milliliter of final urine remains.

From all this it is clear that urine is formed from blood plasma. At the same time, the kidneys create only the basic part of urine. In fact, only certain substances enter the kidneys, e.g. renin, which regulates blood circulation in the kidneys, erythropoietin, which stimulates blood circulation in the bone marrow, and prostaglandins, which change the sensitivity of kidney cells to the action of certain hormones. However, all these substances are here in minute quantities.

Urine therefore contains only those compounds that the blood brings to the kidneys. When excreting urine, the kidneys only change the content of elements in the blood plasma. Below is a table of the components of blood plasma and urine in percentages:

Blood plasma Urine

water 90 at least 98

proteins 7.9 are not included

sugar 0.1 is not included

urea 0.03 0.8 - 3.5

only 0.9 0.8 - 1.8

From the above, the question arises: Can urine be poisonous? In any case! Because urine originates from blood, it cannot poison its own organism. If it were really poisonous, then it would poison us as it is excreted in the kidneys and collected in the bladder. However, it must be admitted that there are certain states of the body when many harmful substances accumulate in the urine, which can have adverse effects when the urine is re-introduced into the body. We will discuss all these cases in the next parts of the book with the corresponding warning about contraindications. Many adverse reactions that occur in some people when using urine, it signals not poisoning, but a cleansing, healing process or energy crisis.

Urine properties

Color

The urine of a healthy person has various shades of yellow, from straw yellow to deep reddish yellow. Most often, the urine is amber in color. The color of urine depends on the various pigments contained in it. The more there are, the more saturated the color.

Urine of a deep yellow color is mostly concentrated, has a high density and is excreted in a relatively small amount. Light straw-colored urine, on the other hand, has a low density and is excreted in large quantities. In general, the more fluids we supply to the body, the lighter the urine, the less, the more concentrated and darker it is. The color of urine can be affected by various pigments that pass into it. E.g. beetroot turns urine red-purple. However, based on experience, I can add that if the kidneys and liver are in order, then even after consuming 1 dcl of beetroot juice, the color of the urine will not change in any way. A very simple indicator the state of your vital organs.

When a person begins to practice urine therapy regularly (or when doing the cleansing steps I describe in Doctor Yourself), their urine can become cloudy as salts and wastes dissolve. This excretion of harmful substances from the body must be seen as a normal and useful phenomenon.

In some diseases, various substances can pass into the urine, which give it specific shades. The fame of Dr. Kamenické, otherwise known as a midwife from Radnice or Týmákov, who

could reliably recognize any ailment by urine and prescribed ointments or herbs. Mrs. Kamenická, who is 98 years old today and is still healing, had a unique way of speaking that we, the boys from Týmákov, admired very much. My father, who liked a good bast and already reached 120 kilos at a young age, once led a kind of blind aunt to Mrs. Kamenická and, just to keep the conversation going, asked what to do with the excess weight. The healer quickly diagnosed him even without urine: "You mustn't eat so much, you pig!"

If ever archaeologists dig around our village, it will be a mystery to them where so many vials of urine came from. In the 20 years of Mrs. Kamenická's work (she received up to 120 patients a day), all the streams in the vicinity have been driven to the edge by them. So that, in addition to the period of the corrugated pottery of the ancient Slavs, which was found not far from Štáhlav, there is also talk of the bottle period.

But I just digressed a bit from a serious topic. So enough jokes and back to urine colors. Colorless urine is mostly due to diabetes, a shrunken kidney and many other diseases. Milk urine usually results from the admixture of a large amount of pus and also from the excretion of various dyes and preservatives added to food, e.g. some cheeses or wafers. Most of the time, these substances are in the first third of the stream of urine, which can be milky in color. Next, the urine is normally colored, but cloudy.

Urine can have a green or blue color when there is significant rotting of proteins in the intestine. Here it is necessary to remember the warning of the Tibetan healers that if the urine smells like food or product, then the body was unable to digest it. This kind of food must be given up. If you want to continue to enjoy it, you must programmatically increase the capabilities of your digestive tract, e.g. enemas.

Urine has a red or pink color due to homoglobinuria or after taking certain drugs: amidopyrine, antipyrine, santonin, etc. The brown or red-brown color of urine is determined by high concentration of urobilin and bilirubin. An increased amount of bile pigments colors the urine in shades of saffron yellow, brown, greenish-brown or almost green.

Based on the color of urine, you can very accurately determine which foods are well absorbed and do not contain waste substances, concentrates and harmful substances, and on the contrary, those which are saturated with them. E.g. artificial polyvitamin preparations are excreted from the body and color the urine in a deep yellow color.

Clarity of urine

Freshly excreted urine of a healthy person is transparent and phosphorescent. After standing, it becomes semi-transparent and after a long time it can become cloudy due to deposits.

Smell or odor of urine

Fresh urine of a healthy person has a characteristic smell. Various substances introduced into the body with food can add a certain smell to it, e.g. garlic, onions, multivitamins. Saffron or menthol also give urine a specific smell. You can smell acetone from your urine when you are fasting. In case of alkaline fermentation, when the urine is allowed to stand for a long time, the urine acquires a sharp smell of ammonia. Healthy urine foams slightly.

The taste of urine

Normal urine has a bitter taste. With a moderate use of slightly salty salt, with mixed food, e.g. meat with dumplings or bread, it tastes like mead. If you take synthetic polyvitamins, your urine takes on their taste. Urine tastes best when eating a natural separated diet. With a plant-based diet, combined with short fasts and cleansing procedures, the urine has the taste of

freshly milked milk, as well as its nutrition.

Reaction

Fresh urine has an acidic reaction between 5 and 7 pH. It has the greatest acidity in the morning on an empty stomach. After eating, acidity decreases, which is associated with the secretion of gastric juices. Acidity is also reduced with profuse sweating. A large consumption of fresh fruit juices can increase the alkalinity of urine, and on the contrary, the consumption of cereals increases its acidity. Urine with an ammonia odor has an alkaline reaction.

Individual components of urine and their properties

The composition of human urine is quite complex, as it is made up of about 200 components. It contains such substances as urea, uric acid, purine components, nucleic acids, guanidine derivatives, histidine, hippuric acid, etheric acids, sulfur, rhodanides, pigments. Furthermore, residues of proteins, amino acids, glucose, acetone, bile acids, lactic acid, pyruvic acid, cholesterol, inositol, higher fatty acids, etheric fatty acids, oxalic acid, succinic acid and others. Urine also contains pepsin, trypsin, amylase, phosphatase and other enzymes, steroid hormones, vitamins. Of the mineral substances, all those present in the body, of the gases nitrogen, carbon dioxide and oxygen.

In addition, in various pathological conditions, the content of some components that are present in normal urine in minute concentrations increases. These are primarily protein substances, glucose, fructose and other sugars, as well as acetone, acetoacetic acid, amino acids, fats, cholesterol, lactic acid, etc. Other substances such as peptides, nucleic acids, fibrin, hemoglobin, bile acid also appear in the urine and other dyes (pigments), hormones, enzymes and many other substances that the sick organism produces in order to manage or adjust the given Health Problems. Many drugs and compounds that have accidentally entered the body, mostly as food additives and preservatives, appear in the urine either unchanged or are processed in such a way that the toxicity or harmfulness of the ingested substances is greatly reduced.

We will analyze the individual components of urine and their properties with regard to
urinotherapy.

The main component of urine is water. Water in the human body and fresh urine are found in the state liquid crystals with an ice structure. Natural water does not have this liquid crystal structure and its molecules are distributed in a disorderly manner. In order for the water that has entered the body to start "working", it is necessary to imprint the above-mentioned structure on it. It is assumed that our organism expends for the structuring of 1 liter of water, 25 kcal of energy. That's why we save our own energy when we drink urine. With regular intake of urine over several years, a similar saving will have a significant effect on the overall extension of life.

There are 48 types of water in nature. These include, for example, so-called heavy water, or deuterium, which is used in nuclear reactors. There are about 150 grams of it per ton in ordinary water. This naturally does not add to our health. From this comes the simple conclusion that the human body works best when using only certain types of water. Scientists have found that the longer the lifetime of a liquid crystal, the more useful it is for the body and the more it resembles the vital fluids in the human body. Therefore, the human body spends energy on creating the optimal type of water from what we drink.

If the liquid crystals, necessary for sustaining life, enter the body already in a structured form, then this greatly saves our energy. Scientists have also determined that where sources

are similar to structured water, people live longer and are less sick. In addition, each organ in the body takes additional liquid crystals and uses them for its activity. If he loses this ability to take the necessary crystals for him, illness sets in. Tibetan healers knew this long ago and treated people with liquid water crystals in precise mixtures and doses corresponding to the type of illness. And it was the intake of urine that helped successfully solve these problems as well. See the chapter on meltwater in my book Doctor Yourself.

The water that passes through our body stores complete information. This occurs as a result of the interaction of the information-energy essence of a person and the fluid. Just remember the statement from the Bible, according to which man is born of the Spirit and water. As a result of this of mutual interaction, the structures of liquid crystals of water change according to the energetic action of man. Various pathological conditions are also "recorded". If we use "described" like this or coded urine, the information-energy essence of the recorded pathology will find itself the focus from which it arose and, thanks to the interference effect, eliminates it. It is this effect that is the basis of homeopathy, or the treatment of like with like. In this direction there is a proper urine an irreplaceable liquid, naturally loaded with all the information about your body, able to destroy various foci of pathology according to the above-mentioned principle and thus cleanse the organism of various ailments and harmful substances.

Freshly excreted urine has an acidic reaction, its pH is approximately 6.0. The acidic reaction of urine is itself a powerful healing factor. Let's talk more about this unique healing mechanism of urine.

It is known that there are two types of cells in nature - plant and animal.

Plants can only exist in an alkaline environment and create it by their activity (e.g. by rotting fallen leaves under trees). Animal cells, on the other hand, exist in an acidic environment and produce them during their life processes (skin, urine and faeces have an acidic pH). It follows that animals, and thus man, can become ill if their normal acidified environment becomes alkaline, which promotes putrefaction. A putrefying environment is favorable for the multiplication of plant cells, which further intensify the putrefactive processes. It turns out that the basis of the vast majority of diseases is one and the same cause - an increase in the alkalinity of the human organism and the resulting putrefactive processes. To avoid them, it is necessary to reliably acidify the body with substances containing safe acids. Obviously, this is best achieved with the help of your own urine. After all, it is a liquid produced by the organism itself from its own blood! As a result of such acidification, we rid any pathological or disease-causing process of its basic premise - alkalinity and putrefaction - and thus achieve rapid and permanent healing. This property of urine is confirmed by the observations of sages of all ages, from which it follows that urine is the basis of all medicines!

In a few words, it is necessary to explain the terms "acidification" and "increasing the alkalinity" of the body. A distinction must be made here. In my book "Myself a Doctor", for example, I claim that the second killer of a person is overacidification of the body, and that the detoxification peel according to Dr. Walkera will help us remove up to 12 liters of acidified lymph from the body in three days and replace it with 12 liters of alkaline juice full of enzymes and vitamins. However, these are completely different bases and acids.

Acidification carried out with the help of substances that increase the concentration of positive hydrogen ions is beneficial for the body (fruits, vegetables), acidification with the help of substances that create acidic waste substances in the body - proteins and carbohydrates - which begin to rot in the body and generally increase its alkalinity, is bad for the body and destruction.

Urine has the highest acidity in the morning and the lowest after eating. Hence the conclusions of the ancient healers that morning urine is most useful.

Due to the special structure of molecules and individual liquid crystals, our urine differs from ordinary water in terms of surface tension, viscosity and electrical conductivity. We will take a closer look at the above-mentioned properties and their possible influence on the human organism.

The surface tension of urine is 85 - 95 percent of the tension of water, i.e. 64 - 69 dynes/cm, compared to 72.8 for water. It is reduced by the presence of protein substances, bile acids and phenols. The essence of surface tension is that the lower it is, the better substances dissolve. A small surface tension increases the surface activity of the liquid and thus a layer with higher energy is created in the surface layer, at the boundary separating individual environments (liquid - air, liquid - oil, etc.), in which chemical reactions take place more actively. Thanks to the lower surface tension, urine is able to dissolve many substances better than water.

With increased surface activity, urine can acidify and break down substances chemically. For example, waxy stones in the liver and gall bladder, stones in the kidneys and bladder can dissolve due to the acidifying effect of urine. That is why it is so often referred to in old books this property of urine to dissolve and open blockages in the liver and bile ducts.

Since the specific gravity of blood is 1.052 - 1.061 and that of urine is 1.016 - 1.024, urine is a fluid with a lower viscosity than blood. It follows from this fact another property of urine: when its internal intake increases the fluidity of thickened fluids - blood and bile. It also dissolves build-up mucus in different parts of the body.

Urine has many salts dissolved in it and is therefore conductive. If we somehow increase the concentration of salts, for example by evaporating part of the water, its electrical conductivity will increase exceptionally. If we smear our body with such urine, we will thus achieve a significant increase in the energy inflow in form of free electrons through the skin. This significantly activates all fermentative (enzymatic) processes in the body. We have to keep repeating that we are only healthy to the extent to which our ferments (enzymes) are active. In a sick or old person, these movements are slowed down. Massaging the body with urine, especially evaporated, allows you to literally "pump up" a person with energy, activate his enzymatic processes, which ultimately leads to overall healing. Now it is also clear why the old yogis recommended doing a massage with evaporated urine.

And yet another amazing property of urine as a concentrated saline solution is its tremendous ability to heal wounds. We will discuss this phenomenon in more detail later.

Now let's look at the substances that make up urine and their properties. The overall composition of urine can be divided into two main parts: normal, common components and pathological, disease-causing components.

Normal urine components are contained in the urine of a healthy person. We can divide them into three groups: organic, inorganic and biological.

The organic substances of urine are further divided into nitrogenous and non-nitrogenous. The final products of protein metabolism are mostly excreted in the urine. The daily amount of nitrogen excreted in the urine varies from 3.6 grams (with a low-protein diet) to 17.0 grams and more with food containing a lot of protein, such as meat. Because our body can reuse (resynthesize) the excreted nitrogen, at intake of urine internally and through the skin can considerably reduce the protein norm food, without harming ourselves in any way. I can confirm this from my own experience, because currently I eat once a day, mostly fish or spaghetti, and at parties I treat myself to shrimp and chicken once or twice a week, which they prepare here in Yemen in a really excellent way.

It was this mechanism that ancient yogis and some tribes used to survive in extreme conditions. If a person uses their own urine 2 - 3 times a day for 100 - 200 grams, need protein foods, especially animal ones, practically disappear.

The main nitrogenous components of urine are the following: urea, uric acid, purine bases, amino acids, ammonia, creatine bodies. The main part of nitrogen is excreted from the body with urea - 80 to 90%. On average, 30 grams of urea are excreted in 24 hours. Urea is a natural diuretic, i.e. removes water from the body, so it can be used as a diuretic. Urine enhances the activity of proteolytic enzymes, which are secreted in the digestive tract and help digest food.

At the same time, urea has a significant anti-tumor effect. The Russian doctor A. Kachugin proposed urea for the first time in the treatment of tumors. In the biological research laboratory of the former Academy of Sciences of the USSR (by the way, one of the best scientific institutes in the world), candidate of medical sciences G. Bělikov confirmed the antitumor, antiviral and antimicrobial effects of a preparation made on the basis of urea - semicarbazide. Practitioners quickly became convinced that how extraordinarily the health of even hopelessly ill people improves when taking this medicine. Research has shown that in a healthy body, the content of intraurea is mostly normal, but it is deficient in an organism attacked by a tumor. A. Kačugin proposed to artificially increase the level of nitrourea in the body with the help of the semicarbazide preparation and achieved a significant antitumor effect.

Urine evaporated to one-quarter is actually a concentrate of urea and therefore will work to tumors as semicarbazide, especially over the skin by applying poultices.

An increased content of amino acids in the urine is observed in the case of protein deficiency, rapid tissue breakdown, fever, poisoning and impaired liver function. Folk practice has shown that losses of these substances so important to the human body can be prevented in time.

Receiving one's own urine internally and through the skin helps in such conditions to avoid unwanted losses and to quickly normalize the body's functions. Remember that it takes a huge amount of energy to make amino acids from food. A sick, weakened organism is unable to provide it. Therefore, the intake of food not only does not help the patient, but worsens his overall condition. On the contrary, the intake of urine, which contains all substances in a decomposed state, does not require any energy and the amino acids are already balanced. And if there are no losses, the organism quickly recovers.

From the group of nitrogen-free organic substances excreted with urine, we will mention in more detail only ethersulfuric acids. These acids, like essential oils, have significant dissolving powers. Herbivores have more ethersulfuric acids in their urine than carnivores. Therefore, the urine of herbivores also has much greater ability to dissolve stones.

Of the 50-65 grams of dry matter that is formed during the evaporation of urine, 15-25 grams are inorganic or non-living components. The inorganic substances of urine are mainly represented by salts of sodium, potassium, calcium, magnesium, iron, chlorine, phosphorus, chromium, and a number of other elements. Even such a cursory enumeration of chemical elements in urine indicates that these are very important elements for the normalization of the human organism. As it turns out, urine salts have powerful healing effects. They actively break down and absorb harmful acids and thereby disrupt the basis of most diseases. The combination of trace elements in the urine "repeats" the patterns of the best tonics resources. In reality, however, such an artificial tonic is much worse than the natural salts of urine. Since today's human diet is very poor in trace elements and minerals (flour is refined, grits are ground, meat contains very little of these substances and, moreover, everything is cooked, preserved and therefore dead), our body is in a constant mineral state hunger. Therefore, regular use of urine internally and externally is an excellent method mineral supplementation of the organism.

The prominent Russian scientist V. Karavayev has developed a special preparation for mineral supplementation of the organism based on a large number of herbs, whose

composition approximates the mineral composition of plasma. The preparation is called Vivaton and is rubbed into the skin. This agent particularly well regulates the composition of the blood and through it all the functions of the body, neutralizes the influence of various external and internal pathologies.

I think that if you frequently apply different baths using a wide variety of herbs, you should achieve the same effect.

The effectiveness of the given preparation cannot be denied, but urine, especially evaporated, is a much more effective and safer agent.

First, it arises from blood plasma and approaches it in its composition.

Second, the trace elements and minerals passing through the human organism also undergo all the changes that occur with any substance before the body accepts it as its own. Without these changes these substances are foreign to our body. For example, proteins from food go through a long process of processing and modification before they become "ours". If this does not happen for some reason, the food protein will cause an allergic reaction. No artificial substance, including Vitanol, has these properties of urine.

Tibetan, Indian and other ancient healers used ash medicine extensively. A certain organ is burned, the ashes, or base with trace elements and minerals, are taken and mixed with the so-called horse, or substance, which is supposed to transport the elements into the body.

Urine evaporated to one quarter of the original volume is a concentrate of trace elements and minerals of natural origin and in this respect far surpasses all synthetic preparations. If the amount of urine excreted in 24 hours ranges from 1 to 2 liters, then during its evaporation, 15-26 grams of minerals can be concentrated in 500 grams. Such urine is an excellent polymineral agent for feeding the organism. This is further proof that urine is the basis of all medicines.

The biological components of urine represent all substances produced by the body. These are hormones, ferments (enzymes), vitamins, etc. All of the hormones were found in the urine, but their concentration is very small. The urine of young, healthy people is most saturated with hormones, and the urine of pregnant women is especially valuable in this regard. The well-known Russian doctor A. Zemkov obtained the highly effective preparation Gravidan by processing this urine.

Because hormonal treatment has a strong and unfortunately mostly negative effect on human health, we will look at it from the point of view of urinotherapy. Hormones (from the Greek word hormao - to encourage) are highly active substances that, even in low concentrations, influence metabolism in the body, such as development, growth, aging, behavior, reproductive functions, etc. It is enough to not receive a single hormone (only our brain it produces about 500) or for one to reside, and the activity of the entire organism will be strongly disturbed.

Hormones are produced by the endocrine system, which can be roughly divided into two parts - glands with internal secretion, which are separate organs, and endocrine cells, scattered in the epithelial (lining) tissues of the mucous membrane of the stomach, intestines, gallbladder, lungs, urinary tract, skin, etc. Accurate the number of hormones is unknown, every year more and more hormones are discovered, as well as the places of their origin. The time is not far when it will be discovered that every cell of our body produces some hormonal substance. Again I bow with humility and wonder at the fantastic coordination and sophistication of all the organs of our body, and repeat again that its innate intelligence is disproportionately greater than our thinking mind. Therefore, one should approach it with respect and not destroy so quickly and barbarically the miracle that was given to it by a huge chance for a second of eternity.

In addition to hormones, biologically and chemically active substances can be formed in tissues and organs -parahormones. They are also called tissue hormones or biogenic stimulators. In medicine, hormones are obtained from the endocrine glands of slaughter cattle, blood and urine of animals and humans, as well as by artificial synthesis. The hormonal (endocrine) system has its own hierarchy and regulation. It includes nerve centers located in the brain (structures of the limbic system, the area of the hypothalamus and pituitary gland), as well as channels of direct connection (nervous activity stimulates the pituitary gland and it produces tropic hormones, which then selectively stimulate the secretion (excretion) of hormones in one or another gland), as well as channels feedback loops, where hormones circulating in the bloodstream affect the hypothalamus and pituitary gland, thus strengthening or weakening their activity.

The hierarchy of the hormonal system is as follows:

1) Hypothalamus consists of 32 pairs of nuclei, each of which has its own functional significance. The hypothalamus controls the main processes inside the organism, it regulates the activity of glands with internal secretion through the tropic hormones of the pituitary gland. These include thyroid-stimulating hormones activating the thyroid gland, adrenocorticotrophic - activating the adrenal cortex, gonadotropic - activating the gonads.

The importance of the hypothalamus is enormous, but during aging, changes also take place in the individual nuclei, and then the functions become out of tune and, ultimately, the reliability of the control of the organism's internal environment is reduced. Professor V. Dilman, for example, assumes that an increase in the sensitivity threshold of the hypothalamus to sex hormones leads to the fact that, with age, more and more gonadotropins are secreted, which influence the formation of sex hormones. In his book "The Great Biological Clock" he states the following facts - at 45 years, gonadotropin secretion increases 6-10 times compared to 25 years. Increasing the threshold of sensitivity to sex hormones initially leads to the fact that gonadotropin accumulates in the body, contributes to its sexual maturation and the involvement of reproductive functions. Furthermore, this process leads to oversaturation of the body with sex hormones and subsequently to climacteric changes, the growth of tumors and the termination of sexual function due to the inability to produce such an amount of hormones.

Our body thus works like a factory for the production of mass production, more and more, and at the same time its equipment wears out, there is not enough building material. However, if the increased amount of hormones excreted in the urine is reintroduced, then we save this living factory both equipment (gonads) and building material. In such a case, the wear and tear of the organism, and thus old age and associated diseases, can be postponed by many years. This fact is contained in the old Shivambukalpa texts where it is said that "both men and women if they receive urine regularly, they gain full potency and eliminate the signs of aging".

2) Pituitary gland. A gland that weighs 1.5 grams and consists of three parts: front, middle and back. Limitation of the activity of the front section causes the cessation of growth, fattening, atrophy of the genitals and prostate. In addition, the hormones of the anterior pituitary gland regulate the activity of other endocrine glands.

The middle section secretes pigment hormone. Decreased activity of the posterior part of the pituitary gland leads to impaired kidney function and diabetes. The hormones of this section affect blood pressure and smooth muscle tone. A significant part of the organism's deviations from normal development is induced poor functioning of the pituitary gland. However, if we correct its work, give it the right impulse, then its functions will stabilize. After all, the basis of the work of the hormonal system is self-regulation. And such an impulse to further development can be given by receiving one's own urine or the urine of another person of the same sex and approximately the same age. This will enhance the

feedback and tune other functions. The Shivambukalpa book of Indian yogis even claims, that by using urine for a period In 3 months, a person will get rid of all diseases completely and forever! I believe it, after a few years of very moderate urine use I feel absolutely bulletproof. No sickness, no trouble at 55. And that I was really riddled with diseases. There will probably be a lot of psychology involved here, I just don't admit that I could be sick at all.

3) **thyroid** produces the hormone thyroxine, a complex substance containing iodine. This hormone affects the activity of certain enzymes. If it is not produced enough, metabolism and cell division slows down, the organism lags behind in spiritual and physical development. There is cretinism.

Urine has a very favorable effect on this gland. Saves iodine, especially if there is little of it in food. The thyroid gland consists of vesicles, entwined with blood capillaries, and the cells of the vesicles are filled with a mucous fluid (colloid) in which the hormone accumulates. If the colloid is poorly diluted, the hormone is not secreted from the cell in full and there is a lack of it. The intake of urine helps to dilute the colloid, reduces its viscosity and allows free penetration of thyroxine into the blood.

Hence the first warning: in Bazed's disease, when the activity of the thyroid gland is too intense, the intake of urine must be very careful. And if symptoms of worsening condition appear - insomnia, irritability, muscle weakness, weight loss - then urine cannot be used.

4) **Parathyroid glands** there are four in total and they regulate the conversion of calcium in the body, its content in the blood. There must be two potassium ions for one calcium ion. This ratio is regulated by parathormone. When there is not enough of this hormone, convulsions occur, mostly in the limbs. Many people have experienced a significant improvement in their health after taking urine, because urine helps to replenish insufficient amount of parathyroid hormone.

5) **Thymus gland** is a gland that produces 10 hormones. One of them is growth hormone. The main function of the thymus is to ensure the immune protection of the organism. Under immune protection, we mean the distinction and destruction of everything foreign in the body: pathogenic cells of microorganisms, old, diseased or altered cells, cancerous and others that are foreign to the organism.

T-lymphocytes, produced by the thymus, provide anti-viral and anti-tumor defense. However, with age, the mass of the thymus decreases considerably and thus the immunity also deteriorates. The organism becomes much more sensitive to various infections, the risk of developing atherosclerosis, cancer, Parkinson's disease and other ailments increases.

However, it is possible to stop the dying of the thymus function if we take children's urine, which the old healers already considered very beneficial. The child's urine is saturated with the whole range substances helping to strengthen immunity. It is best to use a child's urine, starting from a newborn and ending at the age of 12-13 years.

Therefore, if you want to increase your own anti-infection, anti-virus and anti-cancer defenses, dissolve foreign tissue, e.g. corneal clouding, you must regularly use baby urine.

6) **Pancreas** weighs about 80 grams. Its juices help digest food. The gland secretes the hormone insulin, which regulates the sugar level in the body. With the help of this hormone, sugar is stored in the body (in the muscles, liver, etc.). Glucagon - another hormone of the pancreas or pancreas - has the opposite effect of insulin. Dysfunction of the pancreas leads to diabetes. Practice has shown that taking urine, especially in non-neglected cases, makes it possible to eliminate this disease.

7) **Adrenal glands** consist of two parts: the brain (inner) and the cortex (outer). These parts secrete hormones that have a variety of functions. Adrenaline is a brain substance hormone that constricts blood vessels, increases blood pressure, and speeds up heart contractions. Glucocorticoids regulate carbohydrate and nitrogen metabolism. These hormones are

considered stimulators of all life processes. Hormones coming from the cortex of the adrenal glands are closely related to the hormones of the gonads. Their lack leads to disorders in the sexual sphere. In women, it causes the growth of hair on the face, in men, an increase in the voice, and a reduction in sexual needs. Many cases are known when taking urine, especially evaporated, helped normalize hair growth in women (facial hair disappeared), improve potency in men, and also eliminate various diseases associated with adrenal gland dysfunction.

8) Gonads they produce a whole complex of hormones, on which our health, our appearance, mood and general feeling of well-being largely depend. As already said, the gonads work with increasing load every year, as the sensitivity of the hypothalamus to them decreases. But if we start introducing these hormones or their fractions back into the body, then we can process significantly reduce the wear and tear of the gonads, thereby prolonging youth, keeping youthful appearance etc.

If, taking into account these peculiarities, we compare the urine of people of different ages, then we get the following picture: the urine of children up to the age of sexual maturation (up to 12-14 years) contains few sex hormones, but a huge amount of immune substances. The urine of middle-aged people - from puberty to the age of 35 - is balanced in terms of the content of immune cells and sex hormones. The urine of people after the age of 35 is poor in immune substances, but it is saturated with sex hormones. After menopause, the composition of urine changes - it becomes the weakest: it contains few immune cells and sex hormones, the entire hormonal system is out of tune.

Of the other substances found in the urine, the following should be noted: erythropoietin - is formed in the kidneys and stimulates the formation of bone marrow, the enzyme urokinase - helps blood flow to the heart, resembles nitroglycerin in its effect and dissolves blood clots, cortisone - a strong anti-inflammatory, anti-allergic and anti-toxic agent. Vitamins, of which about thirty are active in the human body, are represented in urine in a small concentration in the form of some fractions. Let's recall that normal human urine contains about 200 items of different substances, but that's not all.

Substances produced in the body during illness. At any deviation from the norm, during illness, the organism begins to adjust its condition by itself with the aim of returning to normal. In these periods, substances that help healing appear in the body, which are not found in a healthy organism. If germs appear in our body with diseases that have not yet manifested themselves, then urine creates such conditions that these germs quickly leave the body. As a result, we observe a special process similar to immunization in the body, but only against diseases that are currently active in the body. This process manifests itself in different ways, depending on the nature of the germs of the disease: from minor weakness or diarrhea to a severe crisis lasting two to three months. It is precisely the most valuable property of urine, when one's own powers are used for a similar defense organism, and not a foreign material (drugs) that only pollutes the blood. Every organism is alone it produces these substances necessary for healing. Naturally, these substances are excreted from the body together with urine. We will now look at this question in more detail.

During any pathological process taking place in the body, the products of the respective disease leave together with the urine: dead cells, mucus, pus, substances created by the organism itself to fight the disease, and much more. There is a special area of healing in homeopathy with the help of nosodes. For this purpose, the immediate causative agents of the disease are introduced into the organism in a highly diluted state: toxins, pathologically changed tissues and other body secretions. Based on the law of similarity (the treatment of relatives by relatives), these substances can be used to suppress the corresponding diseases. Medicines of this type are called nosodes.

Treatment with nosodes has its advantages and disadvantages. The disadvantages are that the level of influence or action of nosodes is one level lower than homeopathic medicines.

The advantage is that choosing the necessary medicine is quite simple compared to choosing a homeopathic preparation.

The complexity of choosing a homeopathic remedy lies in the fact that it is necessary to find the substance that causes the disease in question. If there is a mistake, then instead of suppressing the disease, we "graft" another disease. The correctly selected substance must be matched with the energy of the disease, i.e. the energy of the homeopathic medicine must correspond exactly to the energy of the disease. Only in this way, due to the interference effect, will mutual suppression of the disease occur. If the energy of the substance is higher or lower, the disease will not be completely cured. Exactly as much pathology will remain in our body as there was less or more energy in the substance intended to suppress the given disease. In the case of urine, everything matches with 100% accuracy.

If, for example, someone suffers from an adenoma or enlargement of the prostate, the prostate adenoma nosode is used. Human urine is saturated with all the nosodes that are created by themselves diseases, and therefore it is an ideal healing material given to us by nature itself. In this direction, urine therapy has proven itself in most diseases and represents the most modern method of treatment.

During a severe illness, the human body undergoes an increasing breakdown of tissues and their excretion. In order for the disintegrating tissue to be replaced with a new one, the organism must spend a lot of energy, first on digesting food, transporting nutrients throughout the body, transforming them into a state in which they can be used, and only then can a replacement for dead tissue be synthesized from them. This is a huge burden for a sick, weakened organism. Therefore, healing is slow, various complications arise. Russian academician L. Štern, however, believes that these metabolites (dead substances), representing some kind of fragments of protein molecules, hormones, enzymes, etc., can become a building material as well as a stimulator and regulator of life processes. Academician Filatov went even further when he asserted that the organism defends itself with all available means during a serious illness and mobilizes all defense forces to fight against ailments. As a result of this extreme mobilization, substances of a non-protein nature are created in the body, which act not on individual tissues, but on the entire organism, on all its functions simultaneously. Filatov named these substances biogenic stimulators and later proved their effect in many practical examples.

Treatment with nosodes, biogenic stimulators, metabolites, which are all in an ideal composition composed in our urine, brings groundbreaking successes.

Finally, let's repeat why urine has such a beneficial effect on the human body and what its therapeutic effects are:

The effect of significant energy savings when using urine, it arises because urine

represents: a) a structured liquid,

b) a liquid composed of certain isomers of water,

c) luminescent liquid,

d) fluid containing metabolites (dead substances) that act as biogenic stimulators,

e) liquid saturated with various salts (trace elements and minerals), enzymes, vitamins, hormones, etc.

Therapeutic effect when using urine it is caused by urine causing an acidic reaction, has immune and antibacterial effects, contains urea, biogenic stimulators, and has a polyhormonal effect. Urine contains information about specific diseases of the body, it is universal nosodic medicine. Urine metabolites act as stimulators and regulators of life processes.

In other words, based on both scientific research and extensive practice, we can reaffirm

the conclusion that urine is the basis of all medicines. At the same time, it is the most effective, affordable and reasonable use and the safest.

Types of urine and their peculiarities

In A. Maslenikov's book "The Secret of the Drink of the Gods" it is said that urine cures all diseases. But when we started using urine in practice, we found that not all diseases can be treated with it, and the effect is not as fast as described in the text of Shivambukalpa. We began to look for the causes and found important peculiarities on which the success of urine healing largely depends.

Let's start with the fact that there are different types of urine, and each has, in addition to general properties, some that belong only to it and also affect the organism in a specific way. So guys urine are as follows:

- 1) Newborn, children, mature people, elderly, male and female, pregnant women.
- 2) Fresh, old, very old, evaporated, cooled, saturated with various substances and activated.
- 3) Morning, day, evening and night.
- 4) First part (trickle) of urine, middle and last, even and odd number of sips.

The quality and composition of urine is influenced by diet, a person's emotional state, his physical structure, jhis thinking. It is also necessary to take into account the influence of individual phases of the lunar cycle and seasons.

It follows from the above that it is suitable for any kind of disease or health problem use your own urine. Only then does the abstract phrase "it is said to cure all diseases" become a concrete and effective recommendation on how to treat. Without this knowledge and many other factors that I describe below, you will be disappointed and will not experience any of the wonders of urine therapy.

Peculiarities of different types of urine

1) Newborn urine

The reaction of urine in children in the first days of life is strongly acidic. A significant part of the nitrogen excreted in the urine comes out in the form of urea. Addition the urine of newborns is saturated information of rapidly developing life processes.

These properties of the urine of newborns can be used well in suppressing putrefactive or fermentative processes, when the internal environment of the body shows increased alkalinity and "putrefaction alive" takes place. The smell of old age is the external manifestation of this decay. People who emit such an odor are advised to drink this newborn urine. Those who suffer from colon dysmicrobia a similar problems, they should do an enema with this urine. An excellent way to urinate helps newborns with festering, hard-to-heal wounds, gangrene and other similar problems. Due to the fact that it contains a lot of urea, it can be used as a natural diuretic to remove excess fluids from the body, reduce the pressure of cerebrospinal fluid, heal the kidneys, especially if they are affected by infection. In addition, it is possible to strengthen digestive processes, suppress various infectious diseases, dissolve fibrin (thrombi) in the blood, reduce blood clotting and use this urine for drinking and compresses in oncology.

2) Baby urine

As we have already said, the main advantage of the urine of children from 1 month to 12-13 years is her saturation immune substances. The immune system (body defense) consists of central and peripheral organs. Central organs include the bone marrow and thymus, peripheral organs include the spleen, lymph nodes and lymphoid tissue of the digestive tract.

With age, the mass of the thymus decreases by up to 90% and the spleen by 50%, and the immune functions in the bone marrow and lymph nodes are also extinguished, because substances that inhibit the activity of these organs accumulate in the body. In other words, the organism is clogged with waste substances and pollutants. Scientific experiments have shown that if we transplant old immune cells into a young organism, their activity is restored, but the activity of young cells transferred to the old organism is extinguished. This is direct evidence of the dependence of immunity on the degree of contamination of our body with waste substances and poisons. Therefore, a person who wants to protect himself from infections or get rid of infectious ones, viral or cancer diseases, in addition to using urine to strengthen immunity, they must cleanse organism at the cellular level by fasting while drinking urine and water. Here is a sentence that really fascinates me and helps me overcome the initial days of starvation: Fasting for the present the use of urine is the most perfect microsurgery of the cell.

3) *Urine of mature people*

Especially from 18 to 30 years old, it is balanced in terms of hormonal composition and other constants. He should be herefor correcting the functions of your body used by a person aged between 35 and 50-60 years. When treating diseases, however, it is necessary to use only one's own urine (see treatment with nosodes).

If you have decided to use the "urine donor" to stimulate the activity of your organism, then choose a young, healthy person of the same sex and approximately the same body structure. You should know his way of life, habits, diet and also how he feels about you. He should be understanding of your "strange" requests. Don't be shy about introducing him to the cause, especially since you will be using his urine in the form of massages and compresses.

4) *Old man's urine*

Because during this period, a person practically mostly lives as a sexless being with a reduced immunity, an out-of-tune hormonal system and other dysfunctions, it is the least suitable urine, which can only be used for self-treatment of various diseases and disorders. Other people can use it only in hopeless situations, when it is necessary, for example, to quickly increase the excretion of urine.

5) *Male and female urine*

Naturally, both urines have their own peculiarities, which depend mainly on the hormonal composition and also on the "magnetization" of the urine by the male or female essence. Therefore, it is recommended to use the urine of a person of the same sex as a donor. In exceptional cases and only for a short time, the urine of a person of the opposite sex can be used. Due to the small content of hormones responsible for gender differences, children's urine can be used by persons of the opposite sex, but not for more than 1 to 3 months. The younger the child, the longer the urine can be used.

6) *Urine of pregnant women*

This type of urine is very special and useful. The composition of urine and its properties reflect the activity of the mother's organism, the functioning of the uterus as the organ of child birth, the placenta and the organism of the fetus itself. Such a unique set of substances and "encoded" functions it does not exist anywhere in nature.

Therefore, we will briefly describe the peculiarities of the urine of pregnant women and the changes that occur in their system of urine production and excretion. During pregnancy, structural and functional changes occur in the kidneys and urinary tract. Most of these changes are observed around the 20th to 35th week of pregnancy. For example, blood plasma flow through the kidneys increases by 45%, glomerular filtration even by 60%. As a result, excretion of substances of a metabolic and nutritional nature - glucose, amino acids, water-soluble vitamins, etc. - increases in the urine. The most abundant amino acids such as glycocol, histidine, threonine, serine and alanine are excreted in the urine. In the 16th week, the excretion doubles and before birth it reaches up to five times higher values than before pregnancy. Cortisol is also secreted in abundance. It rises three to four times excretion of some water-soluble vitamins (folic acid, cyoncobalamin, ascorbic acid). End products of protein metabolism (urea) and nucleoprotein metabolism are also excreted in the urine.

The kidneys produce erythropoietin, which promotes the production of red blood cells. In pregnant women in the second half of pregnancy, this enzyme is five times more than before.

In other words, pregnant women's urine is the most nutritious "cocktail" (glucose, amino acids, vitamins) and the high urea content makes it an excellent diuretic and anticancer agent. Blood-forming factor helps with all types of anemia. As you can see, this is a real universal urine, which can be used both to stimulate the body's defenses and to treat a considerable number of diseases. That's why at every opportunity try not to waste this incredibly valuable medicine.

7) ***Fresh urine***

This type of urine is the most useful and basically it represents saturated blood plasma salts, minerals, vitamins, enzymes, hormones and other substances. It is used immediately after elimination from the body. There are two types - from a healthy person and from a sick person. A healthy person is advised to use urine for the prevention and maintenance of hormonal balance and also with the aim of saving the organism's energy and material resources. The urine of a sick person is used as panacea. Cooled urine loses many of its excellent properties: especially the ability to generate heat and the structure of liquid crystals. Under the influence of light, it decomposes, oxidizes, deposits form in it, etc.

8) ***Old urine***

Old urine is called stale urine, in which the first symptoms of the decomposition of protein substances are manifested, it smells of ammonia. An important feature of this urine is that it gradually loses its magnetism, luminescence, and internal structure. Therefore, during use (drinking, massages), it will first drain energy from the body in order to restore its former magnetism, phosphorescence and liquid crystal structure. This property of old urine was also recognized by the ancient yogis who warned: "Never use urine for massage that has not been previously evaporated to one-third of its original volume." I also do not recommend that you use it directly (although John Armstrong, the founder of modern urine therapy, is of the opposite opinion). However, it is possible and necessary to accumulate this urine with the aim of later evaporation.

9) ***Very old urine***

As soon as the urine starts to smell of ammonia, it is a sign of the breakdown of the proteins contained in it and the change of acidic pH towards alkaline. If we judge such urine from the point of view of Professor Filatov's results with the use of biogenic stimulators, then it is a healing liquid. Filatov assumed that not all tissues and organs are affected by death suddenly. Those that live on, even when the organism as a whole has died, under the influence of extremely unfavorable conditions secrete some kind of highly active substances of

resistance, which the professor called biogenic stimulators. Let's just remember that biogenic stimulators do not act on a certain organ or function, but simultaneously and strongly on the whole organism.

Extremely unfavorable conditions arise in decomposing urine, under which biogenic stimulators are excreted. The maximum of these biogenic stimulators should occur in urine between the 3rd and 7th day of its storage at a temperature of 20 degrees Celsius.

This property of old urine was intuitively noted by Armstrong, who states in his book "Living Water" that "old urine with an odor, or old urine mixed with fresh, is best suited for massages and anointing." Therefore, it is possible to use even very old urine externally as a strengthening and stimulating agent, the effect of which consists in changing the pH towards an alkaline environment capable of breaking down various deposits of acidic origin. The pungent smell of ammonia helps urine to open skin pores and better penetrate the body's organs. In addition, the smell of ammonia increases or stimulates a person's working abilities.

I remember how we had a class in the middle class in Staré Plzeň just opposite the toilets. Back then, they were still the ones with the groove painted with carbol. In the summer, the smell was really unbearable. The deputy director, whom we called Baba Pokorná (she taught Russian and chemistry), always reassured us: "You guys are stupid, this smell is healthy, it can only benefit you." Now, after forty years, I'm starting to understand.

If we remember the recommendations of ancient healers, it is a good idea to use urine with a similar odor during detoxification: when the skin pores are enlarged, toxins are better excreted from the body, and the ammonia smell itself serves as a support agent. It is also used as an anthelmintic. It cleans the blood vessels well, removes clots from them thanks to its strong action of ammonia vapors, which set everything in motion. As a result, purgatives occur processes, dead basic tissues are torn off. The stronger the alkaline environment, such as ammonia in urine, the better it removes and dissolves dead tissue. This process is stopping in healthy acidic tissues. It can also treat urinary retention, which in some cases is caused by spasms and withdrawals. And it is the smell of ammonia that spreads.

Here are some methods of using very old urine:

a) Enemas with 1 liter of old, slightly smelly urine are used to cleanse the large intestine of sludge and parasites. It should not be stored for more than 3-5 days at a temperature of about 20 degrees. Urine with a strong smell is not suitable, it could cause an alkaline burn of the colon. The smell must be there, but only faint.

b) To clean the vessels and remove blockages (thrombi), it is necessary to make poultices from old urine. First, we use urine with a slight odor, gradually we get used to old urine.

c) The same compresses also help in dissolving salts, we apply them to painful places, e.g. joints. The older the disease, the stronger (with a greater smell) the urine must be, but beware of burns.

10) Urine evaporated to one quarter of the original volume

In the ancient Indian texts of the Shivambukalpa, the use of evaporated urine is recommended. We get it by boiling 400 grams of any urine (fresh, old, children's, mixed) in an enamel or glass (never iron) container until we have 100 grams left. This way we get vaporized "quarter" urine. Of course, we can vaporize 1/4 of any amount of urine, but 100 grams is the optimal dose.

Now let's see what happens to urine during cooking:

a) According to Professor Filatov, biogenic stimulators are created in organic matter under the influence of extremely unfavorable conditions. Boiling urine is just such a condition. As research has shown, biogenic stimulators originally obtained from tissues by cooling them to a temperature of -3-4 degrees and keeping them in the dark for 4-6 days are able to withstand a temperature of 120 degrees C without problems! From there, an important conclusion was

made: biogenic stimulators cannot be of a protein nature (otherwise they would be inactivated) and are special heat-resistant structures. In the urine, therefore, high temperature forms biogenic stimulators, at the same time in larger quantities than in old urine. Urine cannot be evaporated to more than a quarter of its original volume, because its internal structure takes on the properties of soap. Armstrong's recommendation that urine should not be boiled is incorrect. On the contrary, the recommendation of the old yogis is excellent. At the same time, evaporated urine does not change its pH and remains an acidic liquid. But even here, everyone has to choose according to their nature and the purpose of urinothrapy, whether they just want to strengthen their immunity and energy or to cure some disease. I put a lot of faith in the miraculous power of enzymes, vitamins and hormones, which is why I don't boil urine. I haven't needed it yet. I also haven't covered myself with it yet, I mean all over it. However, the situation is different for a sick person and he should try all options.

Actually, I have to admit that my teeth started to hurt, or rather tingle, in Yemen. So I started rinsing my mouth with a quart of urine and the pain stopped immediately. I also put it as the last dose in an enema (about a glass). It seems to me to give an extraordinary boost to my energy, which I need much more here, with the lack of oxygen, than at home.

b) By using evaporated urine, we are actually dealing with the alchemy of the body: we replace water with an ordinary crystalline structure with a heat-resistant, heat-resistant and stable structure of liquid crystals, which is very important for our body. You could say that ordinary carbon is gradually turning into a diamond. The theoretical rationale for this process is that of the 48 natural types of water that make up our urine, only the most stable remain. The less stable ones simply evaporate.

Christopher Berd in his book "The Secret Life of Plants" says that the longer the life of a liquid crystal, the more useful it is to the organism and the closer it gets to the vital fluids of the human body. Exactly such crystals are formed in evaporated urine.

In the town of Hunzakut, in one of the Himalayan valleys cut off from civilization, where the population lives with an average age of 120, a spring of miraculous water springs up. Research has shown that minerals in water exist not as ions, but in the form of colloids, which are negatively charged. Our evaporated urine is a colloidal solution with negatively charged particles or micelles. Tests carried out with Hunzakut water confirmed its unique properties. Concrete made with its help can withstand loads many hundreds of times higher than concrete made from ordinary water (4 tons per square 2.5 by 2.5 cm)! In addition, it is lighter and resists corrosion.

In his book "Water Remembers Everything", Dr. Sergeev says the following: "Common laws of property change during the aging of non-living matter and a living organism have been discovered." From this, a simple conclusion follows: if the laws of aging are the same for inorganic and organic matter, then the body, as well like ordinary concrete, it disintegrates at its natural rate. However, if we change the water, the concrete base and the human organism, we can do a lot

to extend life span, its active, creative period. And as the Shivambukalpa text proves, our ancestors used the ability of evaporated urine to prolong life, to develop creative abilities: "He who massages his body with the help of Shivambu (urine) three times a day and three times at night does not lose the ability to continue the family for a long time. His joints become strong, he gets rid of diseases and attains bliss... He who drinks urine within three years acquires a body full of strength and luster, knowledge in the arts and sciences, the gift of eloquence, and lives as long as there is heaven, earth and Moon."

Change in the internal structure of urine during evaporation.

Micelles (negatively charged particles) have been shown to cluster together when the water content of urine is reduced. These groupings are distributed in a special, orderly way throughout the volume of urine, giving it an extraordinary structure. Thanks to it, the energy

of time accumulates in the urine - the so-called chroral energy. You can feed yourself with this energy and thus increase the organization of your body's structures.This will lead to rejuvenation of the entire organism.

Regular hexagons are the strongest accumulator of similar energy. Nature has been using them for a long time. Examples are rings of benzene molecules, honeycombs, etc.Also urine evaporated to one quarter contains these hexagons, thus reaches the greatest energy charge from all types of urine. Further evaporation of the urine would lead to its saponification and the loss of hexagonal structures.

Based on the investigation of the Hunzikut spring, the Americans developed a recipe for the drink with the addition of colloids discovered in breast milk and cherry pulp. The drink is further diluted with distilled water, which achieves a biological effect on the organism of humans and animals similar to the life-giving Hunzikut water, the effects of which are described as follows: "After using it, an old man gains the vigor of a young man, an old hen gives birth to foals again, trophic scars miraculously disappear, genetic defects of blood and blood plasma are cured without a trace."

In this respect, evaporated urine is in no way inferior to Hunzukut water, nor to the American miracle drink made of colloids of mother's milk and cherry pulp. It concentrates everything useful that was in the original urine, plus what is produced by cooking. This is probably how A. Zamkov, a Russian doctor, obtained his Gravidan (a miraculous extract from the urine of pregnant women).

One example of how evaporated urine works. From a letter from an invalid patient: "For 17 days now, I have been collecting the middle part of the urine between 3 and 4 in the morning, drinking 3 sips of evaporated quarter urine. My bowels have started working again, the polyps in my stomach have disappeared, my stomach is softer and my heart is also working better. I apply urine to my legs and hands, which also helps."

Evaporated urine is a highly concentrated, but at the same time, natural salt solution. Therefore, it acts several times more effectively than ordinary urine as a laxative and cleansing agent. The "pulling" force of evaporated urine is such that during an enema, it not only cleans the mucous membrane of the large intestine, but it has the same effect on the entire abdominal area.

Various types of cleansing the body of toxic substances are widely used in clinical medicine. Most often, toxins bind to synthetic coal. A series of experiments on animals showed the high efficiency of intestinal cleansing with the help of synthetic carbon, added to the diet. The result of these experiments was a significant extension of the animals' life by an average of 43%. At the same time, however, it was pointed out that such purification can lead to undesirable consequences. Therefore, substances and methods are needed that could be used for a long time and safely.

One such substance is precisely evaporated urine, which, thanks to osmosis, absorbs waste substances and poisons, water and mucus, parasites, and at the same time does not irritate anything, on the contrary helps in recovery mucous membranes. The author himself and his numerous followers were convinced that simple enemas with the help of a rubber balloon and 100 to 200 grams of evaporated urine rid the body of mucus, waste and poisonous substances deposited in the kidneys, pancreas, bladder walls, genitals, ligaments and muscles, in the groin area. The entire excretory system is relieved system. It is possible to drink urine, but one must carefully control one's diet. The effects of ingesting urine, especially evaporated, are surprising at first glance.

Evaporated urine changes its taste and color. It becomes very bitter and acquires "twitching" abilities, which are manifested by the fact that when this urine comes into contact with polyps of the large intestine, stomach, and also with tumors, the cells of these degenerative formations die and break off, the parasites leave the tissues. For example, in

many people, worms, polyps and other disorders that bravely resist enemas according to the recipe of the American dietitian dr. Walkera with swallowtail decoction and other ingredients.

If a person purposefully changes his diet and eats mostly porridge and fruit (dried in winter), vegetables (steamed in winter), honey, nuts and legumes and drinks herbal teas, then he will excrete urine with a low salt content. When evaporated, such urine does not have a significantly bitter taste and contains a minimum of salts. Its taste is reminiscent of caramel, its color is honey and its aroma is fresh, pleasant, balsamic. Such urine is able to support the heart because of its golden color it acts on "bad", pathological energy and displaces it. Such urine amazes with its healing power, which has been proven many times. We will mention the light effect of urine in more detail. In his article "Light seen by few", M. Bogačichyn talks about the types of energy that surround us and have different colors and special properties. Mostly, light tones of energy are useful for a person. Some people are able to see black energy covering this or that organ that is sick. The degree of the disease depends on the shade: the darker the color, the greater the involvement of the organ. During the urine treatment, we "irradiate" the organ with light energy and thus achieve healing, the disappearance of the dark aura. The organ heals itself.

The following are characteristics of the healing properties of colors that vaporized urine can have:

- 1) The color red helps the formation of hemoglobin, activates the liver, and increases the body's heat-generating abilities. It can treat anemia, bronchial asthma, constipation, apathy, pneumonia, tuberculosis, debility. It also affects the endocrine system.
- 2) The color yellow activates the motor nerves, helps the production of energy in the muscles, accelerates the flow of bile and expels worms. It supports and cleanses the liver, intestines and skin. It can be used to treat diabetes, indigestion, flatulence, hemorrhoids, rheumatism, and eczema. The color yellow also affects the kidneys and spleen.
- 3) The color orange is a combination of red and yellow. Its warming power is greater than that of red and yellow. It stimulates the thyroid gland, breathing, has antispasmodic effects, helps the metabolism of calcium in the body and strengthens the lungs. With its help, asthma, rheumatism, gout, gallstones, kidney and lung diseases, malignant and benign tumors are treated.

Concluding the description of the properties of evaporated urine, it can be safely said that it is the best kind of urine how for sick people as well as for healthy people.

11) Cooled urine

If you cool fresh urine at -3-4 degrees and store it in the dark, then due to unfavorable conditions, biologically active substances will be formed in it. This is the third option for obtaining biogenic stimulators from urine. But evaporated urine is the best after all.

12) Urine saturated with various substances

From old sources - Shivambukalpa, Ayurveda, Zhu-shi, we learn that urine parameters can be greatly changed by adding various substances. We can do this programmatically or selectively influence the action of this or that property of urine and, through it, this or that function of the organism. For example, boiling urine with a piece of precious metal additionally saturates it with atoms of gold, silver, etc., which strengthens its specific properties. Golden sand is known to cure kidney diseases and urinary retention. Urine enhanced with gold by immersing a gold object in it during cooking, is used, for example, in poultices for diseased kidneys.

By adding various herbs and their mixtures, the content of trace elements and minerals in

the urine increases and helps in feeding the body with these substances. When evaporating urine, e.g. in Russia, they put two teaspoons of dry seaweed in it and use it in poultices and mineral nourishment of the body, as well as in baths for general strengthening and rejuvenation of the organism.

Evaporated urine mixed with honey or sugar changes its taste characteristics, and a person who does not know the matter may think that he is drinking some kind of original, pleasant-tasting decoction of herbs. This can be used to strengthen physical and mental qualities and also in children in the first stages of getting used to urine.

Supplementing urine with various substances creates a huge space for your creativity. Maybe you will be able to tailor some elixir of good health for yourself. Experiment while keeping a close eye on your reactions, it all depends on you, your ingenuity and intellect. This is the highest level of urinotherapy, which comes with experience and practice. Do not forget to write me the results of your experiments, they may help others.

13) Activated urine

By passing urine through the magnetotron, we charge its micelles with energy. Urine becomes more active in all directions. If we bring it to a boil, its internal structure will be rebuilt and it is able to transmit strong currents of thermal energy. In order to fix this structure and then use it to strengthen the body's energy, we must quickly cool the urine brought to the boiling point. As a result of such cooling (it is enough under cold running water), the obtained superstructure "freezes" and you can use it. Urine must be used immediately after cooling to body temperature, otherwise the structure quickly falls apart. With slow cooling, the effect is zero. Healing properties of urine activated in this way (any) are several times stronger than other species, and unlike magnetized urine, it can be used all the time.

Magnetized urine is better used for external use, in baths, in an attempt to increase overall energy. This is especially appropriate for immobile, dehydrated people, where urine significantly increases the total energy charge of the body.

We use sharply cooled urine with constant intake for various types of diseases and problems. For example in oncology to drink and poultices. Simultaneous external and internal use will only intensify the effect of such urine on the body. You can pour activated urine into a thermos, where it will retain its superstructure for a longer time, and use it for compresses.

You can also try activation, which is carried out in homeopathy - the so-called potentiation. The essence of this method is that by gradually diluting the substance, the substance itself practically disappears and only its principle remains at the polar level. For example, drugs dissolved in distilled water in a ratio of 1:1,000 or 1:100,000 retain their medicinal properties. It even turned out that by increasing the degree of dilution, the effect of the drug began to increase, potentiate. After dilution to 10^{-23} not a single original molecule remains in the substance, while the healing effect becomes more and more powerful.

So for urine, your experiment with homeopathy will look like this: add 1 drop of quarter urine to 100 grams of distilled water. That's one dilution. Then shake the flask with the liquid 10 times. Next, you add one drop from this flask to another 100 grams of distilled water as in the first dilution. Shake ten times. You repeat the dilution several more times. If we are to believe homeopathy, the result will be a liquid identical in its properties to a biological stimulator, which simultaneously acts on all organs and very effectively. It is necessary to start from small dilution multiples and gradually reach high multiples. At the same time, you have to listen to your body and monitor the changes that take place in it thanks to urinotherapy.

14) Morning, daytime, evening and nighttime urine

It turns out that there are significant differences between these types of urine.

a) From 3 a.m. to 3 p.m., the acidic phase predominates in our body, and from 3 p.m. to 3 p.m., the alkaline phase. That is why the first urine best heals various wounds, dissolves tumors, and normalizes the body's pH.

b) Morning urine is most effective because it is saturated with hormones. Two hours before waking up, the hypothalamus is activated, followed by the pituitary gland and then the other glands. The peaks of secretion of adrenal, glycocorticoid, thyroid, pancreatic and gonad juices occur in the early morning hours, and therefore morning urine is most useful. Never miss an opportunity take advantage of this fantastic "hormonal cocktail". Morning urine is especially effective in women's diseases (drinking, tampons), because it relieves pain and the damaged mucous membrane of the genital organs heals better after it.

c) In the second half of the day and in the evening, urine is saturated with substances from food, products of daily metabolism. It can therefore be used as nutrition. At night, urine is excreted from your diseases (even potential ones) and you should take it in the morning, an odd number of sips.

d) Kidney activity changes differently during the day. For example, water, electrolytes, nitrogen exchange products are excreted in the morning and afternoon, and titrated acids, ammonia, and hydrogen ions are excreted at night. This example once again proves that night urine, which is secreted immediately after waking up, is best suited for acidifying the body. We use this urine in all cases, both for the treatment of diseases and for prevention and strengthening of the organism.

e) Since the gradual activation of individual organs takes place in our body, the quantity and quality of substances contained in urine also change. If, for example, the liver is active, then at that time there will be more substances produced by the liver (their metabolites) in the urine. If the pancreas is in action, then most of the substances produced by it are in the urine. Therefore, in an effort to normalize and heal a certain organ, we must know the time of its activity, collect urine at that time, activate it in one of the mentioned ways and use it during the functioning of the relevant organ. Let's say you have a stomachache that is active from 7 to 9 o'clock. You put the urine collected at this time in the refrigerator for 3-4 days and then drink it warmed to body temperature or use it for poultices again from 7 to 9 o'clock. This is how you cure your sick stomach. You can do the same for other organs as well, until you reach 100% recovery.

15) The influence of diet, thinking, emotions and individual body structure on the composition of urine

If we eat more protein-rich food, a large amount of urea and nitrogenous substances are formed, which break down into ammonia and give the urine a specific smell, in this case rather an odor. Therefore, the composition of the food is the most important factor determining the taste and smell can. Food containing hemoglobin, especially meat, darkens a person's mind, makes it his character explosive, furious like a predator.

The author has tried all variants of a diverse diet on himself, because for several years he has been using his own urine, which is the best indicator of what we have eaten. The most healing is urine after consuming natural, unprocessed products such as fruits, vegetables, various porridges, nuts, honey, herbal teas. In small quantities, in the right combination, you can also eat meat, eggs, potatoes or cottage cheese. That is, follow the principles of a separate diet. The worst is the urine of the refined, salted, unnatural products and also after frequent consumption of several concentrated foods at once. Based on your own urine, you will immediately understand, without any theory or dietetics, what foods you should eat and how to combine or prepare them. Without using this

feedback, it is useless to explain anything to people about proper nutrition.

In Indian ashrams - hermitages of Hindu penitents, where urine therapy is practiced, the following products are eaten: rice cakes, boiled vegetables, a small amount of legumes, sometimes raw fruits and raw vegetables. With such a diet, urine will have a pleasant taste. Changes in the menu are made in accordance with the individual needs, body structure and diseases that the person in question suffers from. They are also mostly related to his individual body structure. For example, in the treatment of hepatitis (inflammation of the liver) and gallbladder problems, as much sweet fruit as possible, boiled water and especially dried apple compote are used. So for the winter, it's a good idea to dry up as much as possible, and in the spring you'll be like little fish.

There is also another moment when using different treatment products. For example, by using a decoction of wormwood (preferably as an enema), its dissolving and bactericidal abilities affect the entire organism. After passing through your body, the substances of wormwood, together with dissolved waste and destroyed bacteria, create a completely new substance, which, when repeatedly introduced into the body, will have a selective and very sensitive effect on the pathology from which it arose. This is nothing but a method of treating nosodes, when the disease is in a passive stage or is "encapsulated" in the organism. However, the effect of repeated introduction of urine into the body by drinking, enema, rubbing into the skin is much deeper and more targeted than the mentioned example with wormwood.

Urine is excellent when a person eats only sprouted grain bread for three or more days without side dishes and ingredients, without meat, salt, pepper, etc. The healing abilities of such urine will increase considerably and it can also be used to treat other people. If you mix such urine with honey, hardly anyone will recognize that it is urine and not a decoction of herbs.

Unique urine is formed during starvation. Because there is a massive excretion of waste products and the urine is saturated with them, thendrinking such urine (daily only) helps strong dissolution deposits and waste matter and treatment of hidden foci of infection in accordance with homeopathy principle - like affects like. The longer such starvation lasts, the better the organism gets rid of harmful substances, deeper and deeper deposits, all the way to the bone marrow. Thanks to this effect alone, the author gained up to 50 the mobility and flexibility of a real yogi. The taste of such urine is sharper, but all the better it dissolves and expels various pathologies from the body. At the same time, the urine becomes so saturated with waste, salts and other substances that it begins to be excreted through the anus and in this way cleans the large intestine in a natural way. However, when the deep cleansing is completed (this is in about 20 days if you have undergone a colon and liver cleanse before), the urine regains its normal taste properties. Therefore, depending on the taste of the urine, the time of the end of the fast can be determined quite accurately. However, this indicator is very individual and everything depends only on the fasting person. Also, the frequent removal of dissolved pollutants with an enema significantly changes the quality of urine.

In order to understand the importance of the influence of thinking, emotions and body structure on our health, we need to penetrate deeper into the human organism. According to the latest physics research, the main structural level today is not a molecule or an atom, but a quantum, which is a basic unit of matter or energy up to a hundred million times smaller than an atom. At this quantum level, matter and energy become interchangeable. According to Vedic philosophy, the polar essence of man is formed in the beginning, which, thanks to its strong but invisible vibrations, forces the quanta to combine into atoms, molecules and particles. Current research at the Maharishi Ayurveda Institute has confirmed these claims of ancient Indian books.

The polar level of the human being is governed by thoughts, feelings and moods. At the quantum level, every thought creates quantum fluctuations, waves, which eventually transform into material

substances. For example, fear leads to the release of adrenaline, joy to the creation of endorphins, internal opiates. All these substances have different effects on human physiology. They also naturally enter the urine, which thereby becomes medicinal or "poisonous". Practice has shown that harmful substances are created under the influence of worry, anger and other negative emotions. Urine saturated with such substances can cause a certain degree of poisoning when reabsorbed. A happy mood saturates urine with beneficial substances, and therefore its repeated intake is a real balm for body and soul.

It is no coincidence that in Shivambukalpa all those interested in urine therapy are advised to control their emotions. When you attune your consciousness to healing, you are able to create your own medicines within yourself that are effective for your own specific ailments and use them repeatedly through the intake of urine. Free commands, healing spirit tuning and various types of autosuggestion can help you in this, and urine will only strengthen their beneficial effects. This is also where the warning comes from: Urine cannot be drunk after nervous shocks, anger, hatred, insult and similar feelings. You must wait at least two days to receive it.

According to Ayurveda, where the polar level of our organism passes to the quantum level, the three main life principles that the Indians call doshas (dosha literally means moisture, effusion) act. They are different for each person and in the system "polar level (spiritual, consciousness) - material body" they regulate all functions of the human organism. Over time, mainly as a result of a low culture of thought, improper diet and way of life, the coordination between the polar (mental) and physiological levels of the human body breaks down. The result is a variety of diseases and ailments, from neuroses and seizures to insanity, diabetes and cancer. Several days of rest with regular performance of transcendental meditation (relaxation), diet with regard to individual body composition and intake of own urine allow to quickly restore the lost mind-body connection, get rid of disorders and feel full of strength and creative plans. It is for this reason that weekly meditation and relaxation courses to balance the psychological state are so popular in the West.

In this case, our urine transmits and corrects the effects of the calming organism on its unbalanced and out-of-tune functions. This is how our individual body structure affects urine and makes it a very specific liquid at any moment in time. Periodic implementation of such correction programs (3 - 10 times a year) will allow us to always be in shape and in time to bridge the widening gap between consciousness and body.

16) *Influence of the lunar cycle and seasonal peculiarities on urine*

Knowing how our body works during the lunar cycle and seasons will allow us to use urine more effectively and confidently to heal and stimulate the body's vital functions.

During the lunar cycle (lunar month), due to the influence of the gravity of the Moon and the Sun, the activity of the functions of the human body changes as follows: During the first phase (lasts 7.4 days), in its first third (right after the new moon), the head, face, brain, upper jaw are activated, eyes, in the second third - throat, neck, Eustachian tube, cervical vertebrae and in the last third - shoulders, hands, lungs, nervous system. In the second phase (after the first quarter), completely different parts of the body are active, as well as in the third and fourth phases. The following table shows the activity of organs and parts of the body depending on the phases of the Moon.

1st phase (after New Moon):

- head, face, brain, upper jaw, eyes
- throat, neck, Eustachian tube, cervical vertebrae
- shoulders, hands up to elbows, lungs, nervous system

Phase 2 (Day 8):

- epigastric region, breasts, abdomen, elbows
- heart, gall bladder, rib cage and thoracic spine

3rd phase (after the full moon, day 15):

- kidneys, kidney area and sacrum
- gonads, prostate, bladder, small intestine
- buttocks, lumbar bones, coccyx

4th phase (22 days):

- knees, skeletal system, skin and digestive system
- ankles, wrists, lower limb bones, eyesight
- body fluids, peristalsis of the stomach and intestines

In addition, there are two phases (quarters) in the lunar month (lasts 29.5 days) - the first and third - after the new moon and after the full moon, when the organism receives, absorbs and retains nutrients well. On the contrary, in the next phases (second and fourth), the body expels all waste substances and harmful substances. At this time, it is convenient and effective to perform cleansing procedures. If you want to introduce something into the organism (e.g. saturate it with salts from urine), then use the first or third phase of the Moon. Use the second and fourth phases for excreting harmful substances, for example when you want to clean your colon with urine. If you want to purposefully get into a certain body, you have to use the time of day jhis activities.

The seasonal activity of the body's functions and the organs associated with them is a long-established fact. According to ancient observations, during the year the most important organs of the human body - liver, heart, lungs, kidneys and spleen - are active for 72 days. In other words, this period is the most suitable time for their recovery, or cure. Not taking advantage of such an opportunity is an unforgivable mistake. How to behave practically? For example, the liver is active for the first 72 days of the year. During 24 hours, the functions of the liver and gallbladder take place from 11 pm to 3 am. This means that on these days, more liver metabolites are secreted into the blood, which enter the urine and make it "relative" to the liver. Urine must be stored, activated in any of the mentioned ways, e.g. by evaporation, and compresses should be applied to the area of the liver during its activity.

If we combine the annual activity of the organs, the lunar cycle according to the phases and the activity of the organs during 24 hours, we get a unique opportunity to purposefully and effectively influence the functions and organs of our own body with urine. It follows from this knowledge the main rule of the assisted healing process urinoterapie: it is necessary to treat or strengthen any organ of the human body during the period of its greatest activity - seasonal, lunar or daily. In this case, the best results can be achieved and there are no complications.

Practical urinothrapy

Before we start describing the ways of introducing urine into the body, we should know whether we have come into contact with urine before. Naturally, as children and as adults, we tried not to soil ourselves even a little with urine. Our surroundings quickly instilled in us that urine is a disgusting liquid, a waste product of the body, just yuck. Even though in infancy we have almost continuous contact with urine - we pee in diapers and panties and it doesn't bother us at all. If we look at life in the mother's womb, then we see an even more interesting picture: Here the human embryo swims in an ammoniacal solution, swallows it, its eyes are

full of it, the liquid is inside and outside. How is this fluid created, which is the largest amount in 6 months, about 2 liters? Scientists believe that this amniotic or amniotic fluid is created simultaneously by the organism of the mother and the fetus. The excretory function of the kidneys develops in the fetus, i.e. the little person swims in a solution of its own urine.

What is the composition of amniotic fluid? Research with the help of labeled atoms has shown that the composition is constantly and quickly renewed and the liquid contains the following substances: sugar - 27 mg%, urea 28 mg%, salt up to 1% with a stable composition, organic substances 0.5 - 4 mg%. Hormones, vitamins, radioactive substances (thorium and actinium salts) are also present. The environment is slightly alkaline or neutral.

Many scientists believe that amniotic fluid is part of the fetus's diet. The child is nourished both through the skin and through the mouth (a six-month-old fetus already sucks its thumb and newborn sludge appears in the intestine). Radioactive substances and hormones activate the development of the fetus.

Amniotic fluid and urine are very similar in composition, and if we dissolve sugar or honey in the urine, the resemblance becomes even larger. This is also the deciphering of an old Tibetan recipe, which recommends drinking urine with sugar or honey, as it is not only nutritious, but also serves as an environment for the development of the fetus in the mother's womb. In other words, by using urine, we create for our organism the best conditions in which we lived before, at the earliest stage, and thanks to this, we get rid of many ailments caused by adverse conditions. This small example proves that urine can be used effectively both internally and externally.

Ways of reintroducing urine into the human body

Intake of urine by mouth

Urine first disinfects the oral cavity, suppresses putrefactive processes, heals the tonsils. If you hold it in your mouth for 1 to 5 minutes, or if you gargle it, the urine will strengthen your oral mucosa, your teeth will stop decaying and your tonsils will be disinfected. Purification of tonsils occurs thanks to osmosis. Urine soot water and thereby also sucks out any pus, normalizes the function of the tonsils and destroys any inflammatory or putrefactive processes in them.

If the mouth is rinsed with urine for 30 days, then the tooth enamel is strengthened, as the trace elements and minerals from the urine are gradually transferred to the teeth. It is best to do this procedure before going to bed. Many people who are serious about urine therapy use urine instead of toothpaste. Urine does not irritate the oral mucosa, strengthens the teeth and disinfects the oral cavity. Toothpaste, on the other hand, dries, irritates and burns the mucous membrane. Therefore, there is no better means for taking care of the oral cavity and teeth than urine.

Rinsing the mouth with urine also heals the roots of the teeth. Thanks to the "suction" effect of urine, pus and other infections leave the roots, while minerals, which are food for the teeth, flow back. Teeth heal, strengthen, get rid of stomatitis. If the stomatitis was caused by eating the wrong and contaminated food, then this is the best remedy. If it is a manifestation of a disease of the large intestine, then we must first get our insides in order and the stomatitis will disappear by itself. According to many experts, rinsing the oral cavity with evaporated urine is the only way to cure periodontal disease (however, at least after basic cleaning of the intestines and liver).

Urine enters the stomach through the digestive tract, where it cleans the mucous membrane and disinfects it. Urine does not stay in the stomach for long (if we drink it on an empty stomach before eating), but here too it provides invaluable services. Thanks to its dissolving

and suctioning abilities, urine cleans the stomach from pathological mucus. This is also helped by the bitters contained in it. Through the effect of osmosis, urine absorbs liquid and thereby washes the secretory (excretory) cells of the stomach, which then work better. Because urine contains hormones, enzymes (ferments) and anti-inflammatory substances, the stomach lining is strengthened. The acidic effect of urine suppresses ulcer processes in the stomach because a stomach ulcer is actually a destructive, decomposing process, caused by increased alkalinity, insufficient supply of nutrients and energy to the relevant part of the stomach. The intake of urine radically solves all these problems, which explains the good results of urine therapy in the treatment of gastric and duodenal ulcer disease. However, the urine must be low in salt in the given case, and therefore we exclude table salt from the food for this period, eat porridge and a lot of fruit, and drink a lot of fresh fruit and vegetable juices.

If there are polyps in the stomach, then it is better to use more concentrated urine. For these purposes, it must be evaporated to half to a quarter, and then, thanks to its distinctly bitter taste, it will literally tear off the polyps and get rid of these neck-like fungal growths quickly and naturally. Under the influence of high temperatures (when urine evaporates), biologically active substances are created that effectively act on the stomach lining.

From the stomach, partially diluted urine goes into the duodenum and then into the small intestine. Through the action of osmosis, urine continues to absorb water into the intestines and thereby cleans the walls of the duodenum, which can perform its functions, which are digestion at the intestinal wall and absorption of digestive and nutritious substances into the body. All this helps increase appetite and normalize body weight. Urine too helps regulate the intestinal microflora and thus rids the body of persistent dysmicrobias (dysbacteriosis) and other discomforts associated with them.

Urine does not reach further than the small intestine. However, if used in large quantities, it passes through the entire digestive tract and produces a laxative effect and cleanses the intestine. But even this effect lasts a maximum of one to three weeks. Then the urine is completely absorbed and the laxative effect disappears. In the small intestine, the urine is strongly diluted with water, which, with its osmotic pressure, approaches the interstitial fluid and begins to be absorbed. It should be noted here that harmful substances and drugs are retained by the intestinal wall (which also fulfills an excretory function) and excrete them through the anus. This can explain the purification of urine during its repeated intake, when the cloudy liquid becomes clear, containing a minimum of harmful substances, and is simply excreted as excess water.

When absorbed by the walls of the small intestine, urine enters the blood. Here, too, the therapeutic effects of the substances absorbed into it begin to manifest. Remember that morning urine taken on an empty stomach, it is absorbed practically unchanged. Urine taken during the day changes under the influence of digestive enzymes, resulting in a certain reduction in the activity of hormones, vitamins and other substances contained in it.

Urine that has entered the blood dilutes it and thus increases its fluidity. And since the blood from the digestive tract goes to the liver, then first urine has a positive effect especially on the liver. It is cleaned, their functions are normalized, adjusted, bile becomes less viscous. That's why urine intake so works quickly to improve the health of the gallbladder. The dilution of bile causes the conglomerates, concentrates that have formed in it, to gradually dissolve and be absorbed. If there are stones in the gallbladder, they too gradually disintegrate and dissolve under the influence of the own nosodes. That is also the cause successful treatment of gallstones with own urine.

The individual components of urine that have passed through the liver are distributed throughout the body by blood and have multiple positive effects on it. It is above all interference effect to outbreaks of diseases, further hormonal regulation through feedback with endocrine glands, action of dissolving substances: the enzyme urino-case and other

enzymes help to dissolve blood clots and atherosclerotic plaques on the vessel walls. Urea, as a natural diuretic, removes water from the body and reduces swelling. As the anti-cancer factor suppresses the urine in time microscopic foci of tumors and contributes to anti-cancer prevention, stimulates the activity of the heart, kidneys and generally has an extensive effect on the body and maintaining good health.

Urine passes through all the tissues of our body, leaving unnecessary substances in the intestine, which it has washed, purified and activated, and as the purest excess fluid is again excreted by the kidneys, whose tissue is cleansed and healed in the process. This is another effect of the restorative action of urine on the liver and kidneys. Then urine in the form of structured water, saturated with information about our organism, is excreted from the body.

If there are any inflammatory or decomposing processes in the human body that cause disease in a certain organ or tissue, urine suppresses them with its acidifying effects, and the content of protein bodies contributes to the resynthesis (repeated use) and restoration of destroyed cells and tissues. It was this effect that Armstrong was referring to when he said that no treatment except urinotherapy will help to restore the disintegrating tissues.

This is far from a complete list of the effects of drinking urine. If you drink children's urine, these effects will be extended by strengthening immunity and rejuvenating the body.

Before you start taking urine by mouth, you should familiarize yourself with the following rules:

a) it is necessary to use only the middle part of the urine, with the exception of the fasting period, in any case we only take the middle part of the trickle from the morning urine (the first one contains a lot of bile and the last one contains few medicinal substances),

b) urine must be drunk all at once or in odd sips, this is the only way to achieve the interference effect,

c) the most valuable is morning urine, especially from the time between 3 and 4 in the morning.

d) it is necessary to drink at least one liter of liquid per day, preferably melted water from ice or snow,

e) it is not recommended to drink urine while taking medication. A period of 2 - 4 days should pass between the end of drug treatment and the start of urine therapy,

f) the diet for more intensive forms of urinotherapy (drinking urine three or more times a day) should exclude salt and most proteins (meat). Avoid refined and artificial products such as salt, plain flour, preserves, salami, fatty cheeses. It is recommended to limit dairy products. Spicy foods make urine taste and smell unpleasant.

We take urine by mouth

1) To disinfect the oral cavity and tonsils. Fresh urine should be rinsed in the mouth for half to two minutes. If the mucous membrane of the mouth is severely disturbed and the tonsils fester (follicular angina), then gargle with evaporated urine (quarter or half) after rinsing with fresh urine for about one minute. However, the urine must not be too saturated with salts. Pre-boiled urine, which we store in the refrigerator, is heated in an amount of about 50 grams to body temperature and gargled.

2) To strengthen tooth enamel. It is necessary to rinse your mouth with fresh urine for a total of about 30 minutes during the day. Evaporated urine can also be used. Experience will tell you which urine is best to use. I just want to point out that during long-term mouth rinsing, the entire organism is additionally treated through the active taste zones of the tongue.

3) To heal the stomach and duodenum. Here it is necessary to take fresh urine on an empty stomach before meals 2-3 times a day, 100 grams each. Gradually add half evaporated urine to

fresh urine. For example, 80 grams fresh and 20 grams vaporized, after two days 70 grams fresh and 30 grams vaporized and so on until we achieve the necessary effect. In addition to these types of urine, children's urine or cold-activated urine can be used. All these types of urine help to restore mucous membranes and heal ulcers. At the same time, it is necessary to get your diet and lifestyle in order. If we do not find the cause of the disease, the effect will be only temporary.

4) To remove polyps, various neoplasms in the stomach and small intestine. It is recommended to use quarter urine. However, it must be drunk while gradually replacing fresh urine evaporated as in point 3. When using such urine, we must refrain from salty, refined and artificial food. Everything must be natural.

5) To suppress dysmicrobia in the small intestine. We drink our own fresh urine (children's, possibly activated by cold) 2 - 3 times a day before meals 50 - 100 grams. We exclude the diet with the use of yeast.

6) To treat gallstones and liver diseases. Drink 50-100 grams of urine "in one gulp" three times a day before meals.

7) For any infectious diseases we drink 50 to 100 grams at a time in odd sips during the aggravation of the disease.

8) To increase immunity and for hormonal problems. Drink 2-3 times a day 50 to 100

grams. 9) To heal and heal the kidneys. As in point 8, drink urine until completely cured.

10) As a nutritional aid in prevention. Drink 100-200 grams of urine 2-4 times a day.

11) For quick cleansing of the digestive tract. Urine collected during the whole day should be drunk within 2-4 days. Repeat after a week. Use urine drinking mainly in the second and fourth phases of the monthly cycle. To enhance the effect, a little evaporated can be added to fresh urine. Combine with an enema.

12) As a diuretic in heart diseases. Drink as in case 8 until the desired result is achieved.

Reception of urine by enema

If by drinking urine we mainly affect the upper part of the digestive tract, then using urine to the enema will allow us to act especially on the large intestine. Drink and enema, applied together, they heal the entire digestive tract.

Urine and its various variants (evaporated, children's, activated, saturated with minerals, pregnancy, etc.) is the best means for enemas. First of all, it meets the main criterion - safety, its use practically excludes the possibility of overdose. Second, it disinfects the colon without irritating its walls. Thirdly, it adjusts the pH of the environment in a natural way and suppresses the pathogenic microflora of the colon without affecting the healthy one. Fourth, thanks to osmosis, it absorbs water into the intestine and thus cleans its walls. Fifth, with its anti-inflammatory properties, it perfectly restores the mucosa damaged by colitis (inflammation) or other diseases. Sixth, the urine radically, but at the same time, gently expels all parasites from the large intestine (polyps, worms). Seventhly, if you have cleansed the thick with the help of urine enemas intestine and adjusted its activity, you have greatly increased your own energy, strengthened your immune (defensive) system and thus extended their lives.

Methods of using urine by enema

1) To cleanse the colon. It is best to start these procedures with your own urine. Before use, you heat it up and boil the old one and cool it down to body temperature. Since urine enemas are very effective, the doses of urine should not be too large, from 500 to 1000 grams of urine per procedure. I do enemas daily (especially now in Yemen) from the urine collected for a

whole 24 hours (it contains all the supporting and healing substances), which is usually more than two liters. Normally, however, after 10 - 15 procedures that you do every other day, it is effective to perform the same amount of enemas with evaporated urine, half or quarter according to tolerance. Again, you can increase the doses gradually, from 100 to 500 grams by adding 50-100 grams with each procedure. When you reach a dose of 500 grams, you start reducing the amount in reverse order. Furthermore, similar enemas must be done with different types of urine depending on the state of health and in accordance with the lunar cycle (on special days of the second and fourth phases).

Urine can be saturated with salts and trace elements, e.g. from seaweed. Urine can also be diluted with herbal tea, the more you use the better. See the chapters on herbs and baths in my book Doctor Yourself.

2) To heal the body and nourish it with minerals and trace elements, to increase energy. For this purpose, make small enemas with a balloon of 20 - 50 grams, which can contain decoctions of herbs, fruits, seaweed and similar ingredients. If you overdo it dosage, you simply cannot hold urine, it acts as a laxative.

3) K elimination of polyps, parasites and various problems and diseases of the large intestine use option 1.

4) To prevent constipation, stimulate and restore peristalsis of the large intestine. Use micro-enemas of evaporated quarter urine 100 grams every other day until normal stools appear. Pay attention to diet and lifestyle. You need to eliminate the cause of the constipation. If so won't happen, the enemas will only have a temporary effect.

There is no need to be afraid of enemas with evaporated urine, it is a natural remedy that does not disturb the body's functions and does not lead to habituation. I have tried this 100%. After several years of regular enemas, I have stools like never before. In the same way, many of my acquaintances praise the improved peristalsis and the elimination of constipation.

Notice: do not overdo strong cleansing enemas with evaporated urine (option 1). Very they strongly stimulate the energy of the body and push it down. If you suffer from hemorrhoids, the hemorrhoid nodules could be bulging. Moderate use of an enema, on the other hand, treats hemorrhoids very reliably.

Intake of urine through the nose

The neti yoga cleansing procedure - washing the nasopharynx with urine - is a very powerful healing agent means. The area of the nose is densely interwoven with nerves, which ensure the reflex connection of the mucous membrane with all the organs of the body. Irritation of various parts of the nasal mucosa affects the functions of individual organs and systems as well as the organism as a whole. In this connection, at the beginning of the 20th century, the so-called intranasal therapy method was created, which consisted in moxibustion (heating) of individual points of the nasal mucosa and thereby stimulating certain functions of the body.

In addition, the olfactory receptors are closely connected to the hypothalamus, which together with the pituitary gland controls most endocrine glands. When we suck in urine through the nose, the substances contained in it - hormones, enzymes, amines, urea, salts, correction substances, various residual substances - irritate the olfactory cells and the mucous membrane of the nose. This then specifically affects the pituitary gland. In addition, substances contained in urine are able to penetrate the brain through the olfactory bone and affect the brain directly. Furthermore, this influence spreads through the entire organism through the following chain reaction: hypothalamus - pituitary gland - endocrine cells - glands - cells of the organism. This is how a double feedback takes place, which through urine helps

to adjust and coordinate the functions of the body, its internal environment, which leads to the recovery and healing of a person.

Some substances contained in urine can thus have stimulating effects on the whole body. Laboratory tests have shown, for example, that the amount of work done increases when ammonia vapors are inhaled. Ammonia compounds are abundant in all urine, especially old urine.

It is necessary to mention feedback here. The first feedback goes through the mouth. Substances secreted by the endocrine glands into the blood come to the hypothalamus and act on it in such a way that it begins to back-regulate further secretions of the glands. If for some reason this connection is disturbed (the sensitivity of the hypothalamus decreases with age), then the correction of the activity of the glands does not correspond to the needs of the body. Taking urine by mouth is so inefficient. Hormones are activated by enzymes (ferments) of the digestive tract, liver, etc. But if urine is introduced through the gate of the brain - the nasopharynx - a double feedback occurs:

- a) through irritation of the olfactory receptors,
- b) by the action of the substances themselves penetrating the brain region through the olfactory bone. Due the accuracy of regulation increases with such doubling and thus our health becomes stronger for longer time.

Ways of using urine through the nose:

- 1) Prevention and treatment of the organism. For this, it is best to rinse the nasopharynx once or more times a day, depending on the problem. If the urine is too concentrated and irritates the nasopharynx, dilute it with warm water. For prevention, it is best to use your own or children's urine, fresh or activated by cold (must be heated before use). For treatment, in addition to the methods specifically mentioned, use urine evaporated to half to a quarter, diluted with fresh urine or undiluted.
- 2) Cleansing the brain, restoring sight, smell and memory. Drip different types of urine into your nose 5-20 drops several times a day.
- 3) Restoration of hearing and prevention of ear diseases. As with point 2. You have to find the most effective option yourself.
- 4) Inhalation of urine vapor. Old urine, with a not too strong smell of ammonia, is used to stimulate the body's working abilities. Soak a cotton ball in it and inhale it for some time. If you want to cure an infection in your lungs and get rid of mucus, breathe steam of old urine for 5 to 15 minutes.

Pro activation of creative abilities breathe in the aroma of evaporated urine. However, only urine from a very clean person is suitable for this. The aroma is reminiscent of the scent of the best oriental fragrances - sandalwood and incense. Smear it on your hands and under your nose and inhale it.

It will help in many cases revival of sexual abilities inhaling fresh urine from a member of the opposite sex. Aroma primarily affects the instinctive centers, stimulating many of the basic biological needs of a person.

A woman's smell or scent changes depending on her monthly cycle and how sexually aroused she is. The smell of a man is also accompanied by similar changes. Genital secretions of women - copulins - strongly stimulate men's sexual drive with their smell. Once they get to the urine, increase its excitatory properties. Such urine is useful to smell (on a cotton swab) for men with reduced sexuality. For example, courtesans in the Middle Ages used sexual secretions as perfumes or, as they are called today, pheromones. They smeared them behind their ears and on their necks to attract customers. Also frigid women should often sniff the

urine of sexually excited men.

Intake of urine through the skin

In the old books, much more attention is paid to receiving urine through the skin, massages, poultices, especially with quarter urine, than drinking. In order to understand the essence of its action, we will first familiarize ourselves with human skin, its properties, functions, etc. By the way, about the unique properties of human skin to absorb much better than other organs the famous Bulgarian fortune teller and healer, the blind Vanga, also speaks of medicinal substances. Coatings and lubrication prefers to drink teas. A similar opinion was held by the no less excellent Czech healer Father Ferda from Šumava, who recommended it combine drinking teas with compresses.

1) Skin formation. The skin arises from the outer germ layer, from which the nervous system, all the sense organs and the main glands with internal secretion - the pituitary gland and the pineal gland - also arise. It is clear from this that by acting on the skin, we also actively affect the nervous and endocrine system and thus we achieve a strong stimulating effect through the chain: skin - nervous system - endocrine glands - body cells.

2) Skin segmentation. In the initial stages of human birth, the nervous system is divided into segments. For example, the spinal cord is divided into 31 segments. Through a large number of nerves, the brain segments (brain, spinal cord) are connected to the corresponding skin segments (dermatomas). The result is that each section of the skin is in close connection with the precisely determined one parts of the brain, an internal organ (controlling this section) and the musculoskeletal system. Irritation of the skin zone by physical factors (light, heat, electricity, tactile action, etc.) is reflected on the relevant segment of the central nervous system and via its vegetative nerve nodes (ganglia) spreads to the organs and the musculoskeletal system.

Based on this principle, the segmentative-reflective method was developed in Russia in the 1930s. Because the skin was irritated mainly in the area of the neck and back, this method was named cervical cross. Through experimental and clinical observations, the regulating effect of the neck method on blood circulation in the brain, on the pressure of the cerebrospinal fluid, higher vegetative centers, the cardiovascular system, various types of exchange processes, the function of the thyroid gland and pituitary gland was established. The cross method has a regulatory effect on sexual functions, blood circulation and nutrition in the area of the lower limbs, the function of the kidneys and adrenal glands, the organs of the lumbar region and the lower sections of the intestine.

Of course, the local effect has a positive effect on the entire organism, especially on blood circulation, thermoregulation and metabolism. Indications for the use of the segmentative-reflective method are very numerous due to the multifaceted action and retaliatory reactions on the part of various physiological systems and body organs. The neck method is recommended for vegetative-trophic disorders in the upper part of the body, for inflammatory processes in the brain mass and its membranes, for diseases of the organs of sight, hearing, and smell, diseases associated with functional disorders of the cardiovascular system, and for neurotic and certain psychological conditions. The cross method is used for spasms and atonic colic, fusion processes of the lower half of the abdominal area, disorders of the muscles of the lower limbs, and functional disorders of the male and female sexual sphere.

The creator of the method, A. Ščerbak, emphasizes that the greatest effect of the segmentative-reflective method is shown in the case of the correct selection of an irritating physical agent, the specific properties of which can affect various mechanisms of the developing pathological process (this is a so-called biological response). From a large number of irritants to achieve biological resonance best matches own urine. This is completely

understandable (see the effect of interference or treatment with nosodes). But by what mechanisms does urine get into the body? Research has shown that labeled water enters the body through the skin just as quickly as it does back to the surface.It is also the first way to transport urine into the body.

There are a large number of receptors in the human skin. They are also at acupuncture point locations. These receptors are made up of high-molecular proteins which, in a certain state, are able to receive, transport and transmit information and energy from an external stimulus to the acupuncture network. An acupuncture channel is a kind of electrical conductor, an accelerator in which it originates effect superconductivity, thanks to which substances from the surface of the skin can enter the body with the flow of liquid.This is the second way urine enters the body through the skin.

In nature, there is a long-range effect. The essence of this phenomenon is that the energy-informational properties of a drug or other substance spread in space like waves. If this wave or radiation falls on another material object, then part of the energy of the radiation is absorbed and the absorbing object acquires the properties of the emitting object.This is the third, most important method of transmission information from urine to the body. At the same time, as research shows, the reaction after applying some the healing substances on the skin will show up in just 3 seconds!

What is stored in the skin?

Sweat, tear and sebaceous glands, receptors and biologically active points (acupuncture), hair and hair are stored in the skin. In total, there are about three million sweat glands in the human skin. It secretes 300 - 800 milliliters of sweat in 24 hours. In extreme conditions, up to 1500. Most of them are found in the skin of the palms, soles, forehead, breasts, abdomen and armpits. The total sweat excretion area is about 5 square meters. The composition of the sweat secreted by these glands is not simple and contains a lot of urea (about 1 gram in 1 liter) and mineral salts.

Lacrimal glands and vesicles secrete tear secretion, which significantly affects the speed of healing of skin wounds. Lubricating wounds with tears accelerates their healing by up to 30%. What is it caused by? In addition to the fact that there are substances in the tears that help the healing of wounds, the tear secretion is heavily saturated with salts. Just for comparison: blood plasma contains about 8% of salts, urine 30%, tissue fluid 64%, tear secretion 72% and sweat - 75%. While the salt content in the sweat secretion depends on the diet, it varies greatly and it also contains toxins and waste substances that it helps remove from the body, the tear secretion has a constant composition and does not contain any poisons or harmful substances.A conclusion can be drawn from this: the higher the salt content, the more healing the liquid, if the same conditions are met. So if we evaporate urine to 1/4 of its original volume, then we strongly concentrate its salts and give it properties that, for example, can overcome the effect of tears when healing wounds. And I would like to add one more argument why it is better to use evaporated urine and not ordinary or old urine as recommended by Armstrong and other urologists. Let them be excused for simply not knowing these peculiarities.

About 250,000 sebaceous glands are stored in the human skin. Of these, 225,000 grease the hair and hair, and the rest protect the skin from drying out. They work very actively with the newborn. After the age of 40, the excretion of fatty secretions decreases considerably and the skin dries out, which has a negative effect on their functions and therefore on the whole organism.

On average, a person has from 30,000 to 150,000 hairs on their head. At the same time, healthy people lose about 30 to 100 hairs a day, which are replaced by new, young ones. Graying of hair occurs because the secretion of the pigment melanin and the pigment cells of the hair bulbs changes with age. Rubbing urine to hair roots and poultices help restore and reproduce pigment and natural hair color. The rich practice of urinotherapy has shown that in

individual cases hair growth occurs even on a completely "bare plain".

The sensitivity of the skin is huge. On each square centimeter of skin there are 150 to 200 points sensing pain, 5-15 points for cold, 1-2 points for heat and 25 points registering pressure. This is where the recommendation for urine massage comes from: it must be energetic, to the point of pain. Only such an application will cause optimal reactions of the nervous system and internal organs.

Today, we know about 70 biologically active (acupuncture) points. Eastern medicine is said to know over 1,000 of them. Acting on these points by needling, moxibustion, heating, pressure, application of irritating substances, etc. causes corresponding reactions in the body. In ancient China, they called these points transmitters. Because the effect of superconductivity can be achieved through these points, then for example can be easily and quickly (in three seconds) to introduce active substances and salts into the body.

3) Urinotherapy and clay treatment. Clay compresses work most effectively over the skin because they have great absorption capacity. Mixed on the basis of various variants of urine, they greatly increase the therapeutic effect. Urine literally stirs up and expels disease, and clay absorbs it. This procedure is very effective and has been used since ancient times. Old Tibetan medicine recommends applying clay with boiled urine for bone injuries, pain in muscles or joints, leg cramps, because it better removes harmful substances and poisons from the body. The clay must be hot for blood diseases circulatory and respiratory organs. For other diseases, cold is used to better draw the disease and heat from the body.

Clay wraps or poultices are made as follows: clay is mixed with old (settled own, children's, evaporated urine). The clay must have the consistency of thick cream, it must not flow. You soak a cotton or woolen cloth in this mixture and apply it to the sore spot. You put clay on it in a layer of two to three centimeters. Cloth or wax paper again on the clay. You can secure everything with an elastic bandage or another way. Clay boiled with urine can also be put in a canvas bag and worn on the cross if one is suffering from houser or shot. At the same time, you can use clay tiles according to the methods of A. Ščerbak. One more example: Mahatma Gandhi placed clay in a long cloth sleeve and tied it to his cross at the houser (radicle).

Also, ancient Russian healers used cataplasms (clay poultices) in several versions. For example, they mixed clay with strong decoctions of a mixture of healing herbs: with swallowwort, fermented for two months, black and foul-smelling, resinous, ergot, partitions of walnuts, wormwood, a little mummy. The composition of herbs is not so important, the main thing is to use cataplasms in the second and fourth phases of the Moon, when all fluids are directed to the surface, out of the body. Sometimes they moistened the clay with fresh or old urine, sometimes with a mixture of urine and a decoction of herbs, they added powder from dried medicines, cow or goat dung to the clay. By the way, it contains fermented meadow and forest grasses that have passed through the animal's digestive tract.

Thanks to its properties, clay gives urine a special structure, saturating it with radiant energy. There are radioactive elements in the clay in natural quantities and proportions, which has a positive effect on human health. You remember that there are also radioactive elements in the amniotic fluid to help the baby develop faster. In addition, urine is saturated with trace elements. Some healers proceed in the following way: they let the urine stand for 1 to 5 days in a metal container (tin, red copper) and then mix clay with it and cure a number of serious diseases. Stale urine acquires alkaline properties and the ability of ammonia to tear off dead "meat", it is saturated with metal ions, for example copper has yang energy. Alkalinity is also a yang characteristic and acts as an astringent factor. Therefore, if a tumor begins to grow somewhere, which is an expansion or yin process, then by using the opposite, contracting and therefore yang influence, this tumor can be successfully affected. So how Russian healers treated brain cancer: they let the urine stand for several days in a copper vessel until the typical

smell of ammonia appeared, and then mixed clay with this urine. They smeared the sick man's head with clay, as if they were putting on a clay diving mask. They left only gaps for his eyes, nose and mouth. They regularly changed the mask as soon as the clay dried (after about three hours). The clay was applied to the cold head, but it gradually warmed up as it drew the disease into itself.

Experience shows that the skin is the best place to use urine. By acting on this largest organ of the human body, with its unique and multifaceted bonds and connections, we act on the entire organism and achieve much more pronounced reactions than when drinking urine. The skin is also sometimes called the third lung and the third kidney.

Urine has proven to be the most healing agent for skin and maintaining its quality. Now we know why the ancient yogis paid so much attention not so much to drinking urine as to its use in massage and poultices in the vaporized, quartered state. It is here that the secret of the correct use of urinothrapy is hidden.

Ways of using urine through the skin

1) To cleanse the body. Massage or rubbing the body with urine evaporated to 1/4 is best suited for this. Any rash only indicates that the cleansing process and waste substances and poisons have begun they come out through the skin. Continue massaging or smearing the body with urine until the skin clears. If the reaction (rash) is too strong, wait one or two days and then continue the massage. At the same time as this type of cleansing of the body from waste substances, use other procedures that will facilitate and speed up the cleansing process. However, if the organism is heavily clogged, it is necessary to first cleanse the large intestine with an enema and the kidneys and liver with cleansing peels, as I described them to you in my book "Doctor Yourself".

2) To strengthen energy stimulation and supplement the organism with minerals and trace elements. Massage, painting and also baths with the addition of urine are best suited here. Duration of one procedure from 5 minutes to 2 hours. Foot wraps also stimulate and strengthen the body's overall energy. For therapeutic purposes, cold-activated urine of a child or an adult, but not older than two or three days, is better suited.

Very old urine evaporated to 1/4 of the original volume is suitable for dissolving salts. Her the force expands the skin pores and the increased amount of salts increases the osmosis of the urine and literally pulls it out deposits from the body. If the situation worsens after taking such urine, try fresh urine evaporated to a quarter. If even this causes deterioration of health and reactions that do not correspond to the cleansing process, you must stop these procedures. According to the same law of osmosis, salts are drawn from the urine to the diseased area. If applicable, use other cleansing steps such as drinking fruit juices, cleansing peels using enemas, or healing fasting.

Urine activated by a magnetic field and at the same time evaporated to one quarter is also suitable for energetic stimulation of the organism.

3) For purposeful treatment of affected organs. For this, use massage of individual parts of the body, as well as compresses made of urine on the affected organs. Try different types of urine to see which ones work best for you. For purposeful stimulation of weakened organs, massage of the relevant parts during the activity of these organs in accordance with biorhythms is suitable.

4) Use of biologically active points. As we have already said, through these body gates, which are particularly numerous on the hands and feet, on the head, face and neck, one can quite successfully, and using the superconductivity effect, introduce urine into the body. When short of time, it's the one the fastest way to stimulate the whole organism with the help of urine.

5) For cosmetic purposes. Fresh evaporated urine, possibly activated by cold or a magnetic field, is best for this. Rub her face, hands and neck. After drying, repeat the procedure several times. Always wash your face with warm water and only finally with cold water without soap. You can also massage individual parts of the body and wash off the urine after it dries. It will be interesting to see how much urine your skin absorbs, 20 to 30 grams should be enough. The result will be beautifully soft skin on the face and hands.

To encourage hair growth, standing or activated urine is better suited, which is rubbed into the roots of the hair or used as compresses.

6) To rejuvenate the body. For this purpose, baby urine is suitable for massages, body painting and baths, where we add 500 or more grams of baby urine.

How to lubricate the body with urine?

At first, we rub lightly, gradually increasing the pressure to the point of mild pain and back to gentle massaging again. If urine massage is not used during water and urine fasting, then the positive effects of fasting are not always fully utilized due to the heavy load on the heart. When the body is lubricated with urine, this load is reduced to a great extent and starvation is much easier. That on himself

tried by both Armstrong and the author. Massaging the body with urine improves blood circulation and normalizes the pulse, a person retains more strength and can work during fasting.

Special recommendations for the introduction of urine through the skin. In the first and third phase of the lunar cycle, it is better to introduce substances contained in urine into the body, in the second and fourth phase, when the body works to excrete harmful substances and waste, it is better to use urine to clean the skin. After massage and other skin procedures, we wash off the urine as soon as the skin dries with warm water and then with cold water. We wipe the skin dry.

Urine massage allows daily doses of horse urine to be introduced into the body without worry from an overdosethroughout life(as with yogis) and achieve miraculous results.

What must a person practicing urinothrapy be prepared for

We already know the properties of urine and can conclude that its effect on the human body is very effective and diverse. Therefore, its first reception internally or externally may cause strong reactions in some people, in others a similar reaction may come in a few months, in others, apart from a steady improvement in health and the disappearance of the disease, there will be no crises. People's unpreparedness for possible crisis phenomena sometimes frightens and discourages them. They may have the impression that they have poisoned themselves with urine. The doctors to whom such people turn can even criticize and mold them. Because it is a very important question, we will try to answer it from several perspectives and support our opinions with examples from practice.

Crisis states arising during urinothrapy

For example, a person started drinking urine several times a day after a few sips. Most of the time, people have a lot of mucus, phlegm and other pathological substances in their stomach and intestines, which they have no idea about. With the intake of urine, these substances begin to release, break off and leave the body. This takes place in formcleansing crisis, the strength of which depends on the degree of contamination of the organism and the amount of life will. We will give some examples of specific people who practiced urine

therapy.

Example:"From March of this year, under the influence of stories about successful urine healing, I started drinking a glass of urine once a day. After about a week great trouble with the stomach and bowels began, which continued for about two weeks with the secretion of an incredible amount of mucus. Additionally, my liver cleared itself at night. The trouble suddenly stopped."

Comment:In the case of major problems, especially with the liver, and when the organism is heavily clogged with waste substances and pollutants, or general weakness, it is necessary to expect the emergence of temporary inconveniences, which must be overcome. This is the only way to achieve a positive result.I remind you again that starting with urine therapy, especially for severe diseases and chronic conditions, is possible only after basic cleansing of the main organs, at least the intestines, liver and kidneys.

Example:"I had a constant sore throat, especially in autumn and winter, my liver also hurt because I had jaundice twice. The first week I drank all the urine, loose stools were replaced by constipation. I drank warm water and my eyelids began to swell. So I drank urine only 2 to 3 times a day and later only in the morning, I massaged my body with it about three times a month. After a month of treatment, I did not feel well. My liver started to hurt, sometimes my whole side hurts and I feel a cutting pain. I stopped urine therapy and drink only fruit juices, I can't eat. The doctor told me that I might have had an injury somewhere that the urine had corroded. Now I really think the urine ate my liver. Urine is cloudy, thick and quite dark. What should I do? Before the urinalysis, the urine was clear and normal. At home, they scold me for believing everything right away. I have lost a lot of weight, I can't eat, who will cure me now?"

Commentary and recommendations:This woman is overflowing with waste and poison. This is evidenced by frequent colds and a sick liver. Drinking large amounts of urine for one week induced a strong excretion of wastes and pollutants into the bloodstream. This led to an overload of the excretory system, the intestine became blocked and the liver began to hurt. Turbidity of urine indicates the beginning of the excretion and cleansing process, which is very good. However, this process must be completed. In this case, however it was necessary to start with the cleansing of the large intestine, possibly the liver, drink urine only once a day on an empty stomach and make poultices with urine on the area of the liver and lower back. This is a typical example incorrect start of urinothrapy. Now, in order to help the organism to get out of the crisis, it is necessary to drink morning urine 1 to 3 sips, make poultices for the liver, urine enemas, drink melted water and visit the steam room or sauna more often, depending on how the patient feels. In the beginnings of urinothrapy, one must listen to the body's reactions, i.een gradually increase the doses of urine and not to consult fools who are able to say that the urine has eaten away the liver.

In the case of a very strong impact on the organism, when a person still has enough life force and "strong" urine is used, the cleansing and healing crisis is the strongest. By the way, a number of important experts in the field of medicine claim that without a significant deterioration of the health status, indicating that the treatment has "caught" and the disease is beginning to subside, recovery is impossible. Ukrainian academician V. Bolotov says, that positive results during treatment are not possible achieve without stress or crisis states in the body. It must first have a certain turning point, a crisis, and then it quickly recovers.

Example:"My joints hurt, I often had cramps and pain in my legs. I spilled all over. I was troubled by such diseases as diabetes, rheumatism, eczema, psoriasis, fungi. After cleansing with the help of urinothrapy, all these diseases passed over me and I started dancing again and my vital tone increased considerably. First, I cleansed my liver twice. The first time I used 200 grams of olive oil and 200 grams of urine instead of lemon. 100 grams very old, seven days old, and 100 grams fresh. The purge was cruel. The evening started with minor diarrhea, and in the morning from about 4 to 7 o'clock it gripped and twisted me. Something brown and

black, thick and in flakes, was constantly flowing out of me. I lost 12 kg in a week."

Comment and recommendation: This man was overflowing with disease and waste, but at 47 years of age he had enough strength to make amends. The beginning of the cleansing from 4 to 7, when the large intestine is working, testifies to the existence of these forces. At least a weekly application of the enema would have greatly facilitated the cleansing. The use of very old, settled urine, in which biologically active substances appeared, as well as enzymes helping to clean the epithelium (lining) of the intestine, made this 100 grams of very old urine a powerful medicine. The power of such combined cleansing and the final effect are unique. The organism was able to get rid of 12 kg of pathologically altered tissue and waste, and the person rose from the dead.

If urine is used through the skin, specific crisis phenomena may occur.

Example: "At the age of 31, I suddenly started losing my hair. I had a nervous breakdown and my hair was falling out in clumps. My hairdresser (an elderly Iranian woman) advised me to make a poultice of warm urine before washing my head. After 6 months of this procedure, my hair is as thick as before, dandruff, itchy scalp is gone, hair is shiny and silky soft. I did the compresses 2-3 times a week. At first, however, I had my hair cut short. After the first 3-4 procedures, a rash broke out on my head, it itched terribly, sores appeared. They told me it would pass, so I suffered. 17 years have passed since then and I am still grateful for the advice."

Comment and recommendation: The use of urine through the skin always leads to cleansing of the body and brings everything to the surface. If boils appear on your skin after 4 to 5 massage procedures with urine, this is proof that the cleansing mechanism has been started. Continue massaging the skin every other day. Visit the steam room or sauna more often, sweating rids the skin and the whole body of waste.

Once again I warn against large doses of urine in the initial stage. People often don't even have one an idea of how rotten their body is, how many diseases are in it ready to manifest themselves at any time. Urine brings them to the surface, helps to find out what many have no idea about.

Example: "I tried massaging my head with urine about three times before the steam bath. Dandruff disappeared, hair softened. Then I properly lubricated my head with urine for the fourth time and suddenly I started to have a severe headache, the blood pressure jumped to 160/100. I stopped the massage, I drink urine once a day. After a week the headaches stopped."

Comment and recommendation: This woman was very sick. She took a lot of medicine and called the emergency room once a week. Massage of the head, acupuncture points and reflex zones agitated the whole organism, which led to the mentioned reactions. It is necessary to clean the liver, it is clogged, which was one of the causes of the increase in blood pressure.

Another example shows symptoms when blood clots dissolve in the legs.

Example: "After malaria, I have a diseased liver and blocked blood vessels in my right leg. I've been drinking urine for a month now. In the place where the thrombus is, it itches strongly, as if there is some kind of rash. The blood clot suddenly disappeared. I am happy and now drink urine three times a day."

If a person has gallstones or kidney stones and doesn't know about it, sand may start coming out of his body when he drinks urine. This should not surprise you, urine simply eliminates all pathology in the body.

Example: "I started doing urinotherapy in 1990. During that time, I managed to get rid of the noise in my head, I can hear again in my left ear, my hands stopped shaking, my fingers and toes became free, and the stones came out of the gall bladder, three months the sand went, the swelling of the knees disappeared."

Recommendation: When you clean your colon and with it the whole body with urine enemas, you may initially feel great pain and the urine will be excreted immediately. This indicates the pathology of the colon and the whole body. When using enemas with evaporated urine, you can get worms of considerable size, whole chains, jellyfish-like masses, various formations as black as tar, blanks, detached polyps and other messes. The excretion of these pollutants and wastes confirms the healing effects of urine. Continue the urine enemas, every other day, deny your body rest, so that the pain subsides and everything calms down. You will be able to keep even evaporated urine in you for 20 minutes or longer.

Example: "I cleaned my colon twice. For the first time, a kind of wick with balls of hard sludge came out. So much crap, it can't be described. And when I did micro-enemas with evaporated urine, I got such clumps that I couldn't believe what was inside me. During the first bowel cleansing, I got chronic inflammation of the intestine, which I always have in the spring. I felt horrible pains in my stomach. Clay compresses with urine, which I changed three times a day, helped me."

Comment and recommendation: This woman treated her pain very well with clay compresses. The first cycle of enemas is over, during the second cycle she should get rid of herself deep water pathology, which nothing but evaporated urine (and fasting) can remove. The second cleaning will pass without any problems.

Conclusion: Always start your colon cleansing with plain fresh urine and work your way up cycle apply vaporized.

The use of urine in gynecological, proctological (digestive) and similar diseases initially causes severe cutting pain. This is due to the effect of the acidic environment of urine on the festering (alkaline) surface of the wound. After several procedures, the pain subsides and the wound heals quickly.

Example: Patient 36 years old. Cervical erosion. It all started 12 years ago after a difficult birth. For the past three years, the disease has been in the "blooming rose" stage. She decided to do the morning injection of her own fresh and warm urine on the affected area and apply tampons with her own standing urine at night. During the first injection, the patient felt only a slight stinging. Three hours after inserting the first tampon with old urine, the woman felt unbearable pain. She removed the tampon and wanted to leave everything. The author tried to prove to her that the pains are from the "blooming rose". Until the urine removes the scarring of the mucous membrane, until healthy tissue appears, it is need to suffer. The hospital was convinced by a story about a case of leg gangrene, when a certain professor he made the patient suffer pain until the urine removed the diseased tissue and healthy skin formed and the legs were saved. The patient resumed applying tampons. The pain lasted for another 3-4 days. They stopped completely in a week. The patient started drinking her own urine on the third attempt. She threw up on the first two. She went to the gynecologist in 14 days. The patient's general practitioner was not present, so another doctor took her in. After a long examination of about half a year's records and a thorough examination, the doctor stated in amazement: "This is strange, you have so much in the card and everything is clean here."

Recommendations and comments: In such cases, tampons are not soaked in standing urine, but in children's or fresh urine. Fresh urine has an anti-inflammatory effect and reduces pain. Only then can you use tampons with evaporated or long-standing urine, which perfectly removes and tears off dead tissue.

Example: "I used to suffer from paraproctitis. They even operated on me. Now there is a relapse, the tumor has grown like a fist, I can't walk. I started doing small enemas with evaporated urine and putting tampons on the perineal area more often. After the first enemas in the paroproctitis area, it burned like a hot iron. I suffered and continued to insert urine tampons. I used to have smaller hemorrhoids that I couldn't feel. Now they came out like little droplets. I continued the treatment, the hemorrhoids disappeared, after two weeks the

paraproctitis also disappeared. I've been at peace for three years now."

Example: Another patient was convinced of what pains can occur. After applying a tampon with fresh urine to the internal hemorrhoids and the tumor that was blocking the smooth bowel and preventing emptying, a burning pain began that shot into the leg, spine, and bladder. The pain lasted for two weeks, but the patient regularly continued the treatment, even though he shortened the time of applying the tampon (wick) from 2 hours to 20 minutes. The pain made him so weak and angry that he didn't even want to see anyone. That was a tough test. Towards the end, he felt that the pain in the walls of the large intestine gradually subsided, going inside and burning the metastases. Next, the patient switched to tampons with evaporated urine and he no longer felt any pain, everything calmed down. The whole procedure took 1 month. But he will never forget the first two weeks. It was during them that he understood what a cancer patient in the final stage of the disease feels - crazy, hopeless pain. Such a sick person wants only one thing: for it to end, for example to cut off half of his body, just so that the hellish torment ends and he can die as quickly as possible. Two weeks in pain completely reborn the patient, he became a different person. There was not only a physical but also a moral cleansing.

Example: "In 1988, I was diagnosed with left breast cancer. I didn't do anything for two years and the tumor grew to the size of a goose egg. No pain. I started urinothrapy in October 1990. I drank morning urine on an empty stomach and applied compresses to my chest. By July 1992, there were no changes, but the tumor had stopped growing. Then pus and later blood began to flow from the breast. In August, a sore the size of a dime formed on the nipple. A trickle of blood began to flow from her. It also flowed under the nipple. About a third of the cup suddenly leaked out, then it stopped flowing on its own. The daughter brought an oncologist from the hospital. He said something was wrong, but he didn't know what. He sent me to the hospital for an examination. I refused to go anywhere. In September and October I bled often, almost every other day, but from December 1st it stopped. Only pus oozed out. Many blisters formed around the nipple, individually and in groups. They cracked and blood and pus flowed from them too.'

Comment and recommendation: Detached cancerous tissue comes out through the skin in the form of pus, and therefore it is necessary to apply poultices, clay cataplasms more often in order to accelerate the elimination of the decaying tumor from the body. Shrinkage of the tumor, its discharge in the form of pus, and the like, are good symptoms indicating successful treatment. It must be continued until the victorious end.

Under the influence of urinothrapy, the effect finally occurs accumulation effect. In the initial period, everything goes smoothly, but gradually hidden, deep-seated pathology begins to emerge from the body in thin layers. At the same time, unpleasant and painful things happen to a person, which must be overcome with firm faith. This is the only way to get rid of many years of problems, waste and pollutants and achieve positive results. If you go through the 7 cleansing steps before, the whole process overcoming a serious illness will be much easier.

Example: "I suffered from many diseases in my childhood. I had my tonsils removed in second grade. I was diagnosed with rheumatism and my joints creaked until the sixth grade. I had a sick heart, was overweight, and was constantly ridiculed by my peers. I started playing sports at the age of 13. I wanted to get into flight school. My dream came true. At 20 I was a strong and healthy bachelor. But I didn't finish school. I developed a chronic mental illness and visited a psychiatric hospital every year. They gave me disability. From the age of 25 to 30, I became prone to the flu, but I never took medicine. I was convinced that the body had to help itself. I was getting into crises, but I want to live, even if it is not a pleasure. His heart was gripped by unimaginable longing, constant worries and fears took away all his strength. The world was grey. A year and a half ago, my teeth started to bother me. Three had to be ripped out and replaced with a prosthesis. When I learned about urine therapy, I started it right away. I drank urine without getting used to it, fresh, middle part three times a day, suddenly an

odd number of sips. With the help of the compass, I oriented myself to the east. I started taking the first urine from 3 to 5 in the morning, the second from 11 to 13, the third from 17 to 19. I did not use urine after 8 pm until 3 am. I didn't do the massage. I hid from those around me that I was engaged in urine therapy. To this day, no one in the family knows. It is much easier to have a watch on your hand and a collapsible cup in your pocket. This is quite enough for a person to be able to practice this procedure anytime and anywhere. So I continued to drink. During a severe flu epidemic, I only languished for two days. It used to be much longer. For the first three months, I didn't have any special sensations, I just started having regular stools. After about three and a half months, severe pain started in my wrists and knees. I had such pain in my legs that I didn't know how to proceed. Hemorrhoids appeared, sharp pain in the genitals, cutting when urinating, sexual weakness, terrible pain in the back and in the entire spine, cutting in the abdomen, pain in the right side, under the chest and in the solar plexus area, I was troubled by heartburn and pain in the lungs, my heart throbbed, my throat hurt, my right ear hurt, my teeth started to hurt and I was shaking, I had a cold all the time. All kinds of pimples and blackheads popped up all over my body. I developed a fungus between my toes and in my groin. I just had a normal temperature. (This is precisely a symptom indicating a cleansing crisis and not a disease - author's note). All this lasted a little over a month. One problem followed another. I called this period "little hell". At the same time, however, I felt that I had nowhere to retreat. I found in myself a strange coolness, a blind faith bordering on fanaticism, that everything would be normal again. I continued to drink my own, native urine. In addition, I began to wash my mouth, throat and nasopharynx with urine in the morning and in the evening, I took a contrast shower every evening. I still do that today. I was naturally preparing for crisis phenomena, but I did not expect something like this. Perhaps it wasn't even a crisis, but an exorcism. Relief came on the fifth month of urine intake, on the sixth month I tried to start running. In my youth, I mean the years after coming out of the army, I tried to run several times, but after two or three kilometers my muscles hurt so much the next day that I lost the desire to do sports. Now I ran 3 kilometers on the first day like I used to. What was my surprise when the next day I felt no pain in my legs. So the next days I ran 5 and then 6 km. I felt a pleasant fatigue in my whole body and my legs hummed like a transformer. I started running 10 km and stopped there. Today I run this distance every day without rest. There was a strange persistence. At the same time, I weigh 92 kg with a height of 180 cm. I am 31 years old. I continue to use urine and have stopped visiting the asylum. I feel like a twenty year old. Nature gives everyone such a chance to survive, you just have to take it."

The author leaves this letter without comment. Judge for yourself.

Example: "I've been drinking urine for several months, the middle part. After fasting, I go to the steam bath and only then will I feel the effect of using urine. I'm usually there for three hours and I really enjoy it. I have been going to the couple for 15 years and I eat reasonably well with my family. Therefore, I was convinced that the urine would not cause me any vomiting, poisoning or other negative manifestations, about which there were reports - warnings - condemnations in the press. The neighbor, who literally overeats herself on meat and canned food, throws herself from extreme to extreme and is literally crammed with waste, drank urine for a day and expected an immediate result. Then they took her to the hospital, as if poisoned. I told her that any treatment must be approached with caution, with sensitivity and strictly individually. In addition, when he has inflammation of the intestine and stomach and other problems. Such fools then write in the newspapers and try to dissuade people from real and correct treatment, which alone is capable of sustaining and prolonging life. That makes a person sad."

Comment: Here, too, the reader can decide for himself whether to use urine or not. The example clearly shows what you may encounter. You just have to keep repeating the motto of the sages of old, don't you urine is a remedy for the brave. And I would like to add: and for those who are wildly curious and want to know a lot.

In 1995, a certain magazine published a critique of my book "Myself as a Doctor", in which the editor, with the help of two doctors, criticized not only my cleansing program, but especially the chapter on urinothrapy. It didn't hurt the book too much (it was on the bestseller list for several months and is still sought after), but there remained a certain bitterness and fear of human stupidity that can just throw away a thousand-year-old method that, if used correctly, could bring relief to a huge number of people, certainly more than both doctors combined.

Urinothrapy in specific cases

Because urine has a strong multifaceted effect on the human body and can be introduced into it in many ways, there are many methods of its use and many combined, mutually reinforcing variants: urine therapy - starvation, urine therapy - clay treatment, etc.Hello one method is suitable for prevention for a person, a completely different one for a sick person. Therefore, we will analyze some questions in more detail.

How to properly start urinothrapy? Each healing method is only effective and suitable if one knows well the mechanism of its action and if it meets requirements such as safety, clarity and simplicity of use. In the first phase of using any method, intellectual preparation is necessary, the acquisition of exhaustive knowledge about the given matter. The previous interpretation should be such a preparation.

Other concerns associated with the use of urine stem from the sexual area. Urine comes from the genitals and can be associated with something forbidden or inappropriate. The sexual component of urinothrapy has a great energy charge. All neuroses are associated with the suppression of something, with moral prohibitions. These violate the natural circulation of energy, moreover, energy is wasted on following these stupid prohibitions. Know that nature directs its processes so that energy arises and circulates freely and is used spontaneously, as needed. Happiness and security are, for example, natural states of mind. It is they that strengthen energy and help its free circulation. As soon as we develop a neurosis, we block this natural circulation of energy, disrupting its normal passage. This is where all neuroses stem from sex, traditions, superstitions, prohibitions and similar restrictions, when blockages and energy losses occur. Therefore, a free-spirited approach to urinothrapy and a relationship with urine is an important step, especially if it is motivated by an effort to remove a mental or physical blockage. Even the ancient Indians claimed that urine has the ability to release prana (energy) of mind and body. Once you remove from your mind the ossification that prevents us from using urine, energetic and physiological processes will flow freely, without difficulty.Therefore, urinothrapy can be highly evaluated even from a pure point of view psychological point of view.As soon as we find out that urine can be useful for us in something, our relationship with everything that we previously considered unpleasant changes. We will feel more flight, energy and will to discover other mysteries of life. Our relationship with nature will be even more positive and many will surprise and interest us rather than cause fear and disgust.

After overcoming the psychological barrier, it is necessary to show the person that the use of urine is safe, effective, simple and clear. When a person is convinced from his own experience that what he heard corresponds to the truth, he himself suddenly feels relief. He convinced himself of the safety of the method, and now it is difficult for anyone to convince him otherwise.

So, we present to you the method of correct and gradual initiation of urinothrapy. You will feel the first results in just a week, which will be tangible in a month and convincing in half a year. Then you decide for yourself whether to continue or not.

When to start urinothrapy treatment and from what? Begin each new venture at the beginning of the lunar month, after the new moon. This is a natural natural cycle, a closed one at that, and it is important to act in accordance with it. This is especially true for men and children. For women, it is possible to time the start of urinothrapy at the end of menstruation, one or two days after menstruation. Such a beginning does not in any way disturb the natural course of physiological processes.

In many people after surgery, as in animals, excretion of feces and urine occurs through the smooth intestine and jIt is therefore logical to start urinothrapy with enemas. From a physiological point of view je it justified by that. that in today's man, the large intestine is the biggest source intoxication of the body from waste and harmful substances that accumulate in it from improper diet. Enemas with water (and lemon juice or chamomile) and small enemas with urine will quickly clean the colon. A significant healing effect will be seen in just a week, if there are no serious diseases in the intestine. The procedure can be done as follows: immediately after passing stool, you inject 200 - 400 grams of urine into your anus with a rubber balloon in two to four doses in a row. The urine of a child up to 10 years of age can also be used, regardless of gender. So you will continue every day for one week.This is the first stage that will show you how to use urine jsimple, safe and useful for your health. In addition, it will take as much time as cleaning teeth.

Then you can proceed tosecond stage, which will convince you of the effectiveness of urinothrapy. In this phase, in the morning, you wash your nasopharynx with fresh urine (neti method), rub the skin of your face and hands, and also do enemas with evaporated urine. Once the urine is dry, wash it off with warm water without soap and then rinse with cold water and dry with a towel. If you want to use soap, wash with soap first and then apply urine after wiping with a towel.These two jsimple procedures will improve your mood, feelings and skin.Gradually change your diet, starting with juices and fruits according to the season (frozen and dried in the winter - it preserves vitamins and especially enzymes) and then different cereal porridges with a minimum of spices. Instead of porridge, you can eat nuts, potatoes, white meat, fish and other natural products, but only separately. They are all combination foods. If you change your diet (this can take at least half a year), you will find that your urine has a much better taste, eventually it can taste like freshly milked milk. From such urine, you can prepare evaporated urine, which you use for enemas. You do it with a quarter of your urine every other day. Use 50 grams the first time (100 grams for those who are braver), increase the dose by another 50 to 100 grams in two days, and so on, until you reach 250 or 500 grams, respectively. Then gradually return to the original dose. This will take you about 20 days. These mini-enemas will show you what you've been growing in your colon and how easy it is to live parasite-free.

Now that you have familiarized yourself with urine therapy and relieved the excretory systems, proceed to the third stage, which againtimed to the beginning of the lunar cycle.Now start drinking the middle part of the urine, in the morning on an empty stomach, an odd number of sips, rinse your nose and rub or massage your body with evaporated urine once or twice a day. This is mainly done by sick people, it is not necessary for prevention. Also, try putting urine compresses on your feet, lower back and neck instead of a massage. First for 10 to 20 minutes. If there is no strong response, you can gradually increase the time of compresses to two, three hours, or overnight. For women, washing and spraying the genitals with fresh urine will be an excellent additional procedure. After completing the six-month course, you will be completely different people. If you are sick, you must go through cleansing and healing crises to finally gain health like you have never known before.

I will give an example of a specific dialogue with a patient:

- "When did you start urine therapy?"

- "Two summers ago and I've been practicing it every day since then."
- "What made you do that?"
- "Helplessness, absolute helplessness, with a whole range of diseases and lack of medical care. So those diseases: arachnoencephalitis, chronic pancreatitis, chronic cholecystitis, duodenal ulcer, chronic gastritis, rheumatoid arthritis. It's hard to say which organ didn't hurt. I had a terrible allergy. My whole body itched, an allergy caused by an overdose of medication with no hope of relief. They wanted to send me to a madhouse."
- "What exactly did you do with urine therapy?"
- "I started drinking urine immediately, as much as I could, an odd number of sips or rather gulps, from 7 to 15, so I drank 300 grams at once. I drank only in the morning, lubricated several times a day, depending on how I had time, in the morning, at noon and in the evening. However, I stopped in the evening, I was very upset. I also started doing enemas right away. For the past year I have only been drinking evaporated urine. I changed my eating habits and came to the conclusion that urine became a real medicine for me. I like it, it smells good, it doesn't cause any problems. When I cook it at home, no one knows anything. However, I have a hood above the stove.'
- "What are your successes in healing the organism?"
- "I am 52 years old and I have practically returned to the health of a thirty-year-old woman. I run, jump, ski, swim in ice water and in freezing temperatures. We enjoy life. In the plexus solario area I feel a fire that warms me. Mainly, I got my lost health back."
- "What changes do you observe in the spiritual realm?"
- "In a year I came out of the darkness, I started to understand the meaning of life. I converted to faith, I was baptized, I feel cosmic vibrations, I have a feeling of connection with the universe, which fills me completely. I try to help people, that's what I see as my purpose in life now."
- "What would you like to add?"
- "First of all, people have to believe. Clearly. Without faith, the whole system cannot function." - "What difficulties did you have when taking urine?"
- "Difficulties, all my illnesses that I had since childhood were incredibly difficult to get rid of. During the kidney treatment, my lips turned black and I lay as if dead. Pus was pouring from my eyes. I couldn't open them in the morning, they were stuck. But everything passed within a week. For example, my kidneys hurt for three days. I had high blood pressure, my bones and skin were angry, there was no organ that didn't hurt. And everything took place in a very sharp form. Sometimes I couldn't even get out of bed. But faith helped me overcome everything. People with great difficulties, expecting a quick turnaround of recovery, must strongly believe, not be afraid, not look back. If you have decided, it is necessary to go directly, drink urine, rub it into your skin, make enemas with it, all in one complex. Drinking urine is necessary to heal the stomach and intestines. Today, a person is poisoned as many times as he takes food and medicine.'
- "How do you use urine now?"
- "I drink evaporated urine every morning, I do mini-enemas as needed. When I eat fresh food and few starches in the summer, I hardly need enemas. In the cold season, when boiled food and porridge predominate, I do enemas daily. Life without enemas with boiled water I can't imagine using urine anymore, because they give me a charge of energy and bliss all over the. Otherwise, I don't have any problems with defecation."

Also, the practice of ancient yogis emphasizes washing the large intestine with an enema with the help of various infusions in order to achieve maximum purity and energy. The

intestine itself then works in a coordinated manner and without disturbances.

It is necessary to start urinothrapy gradually and consistently in this way.It is better to continue with evaporated urine, it is more effective. Other variants can create strong backlashes that create a negative experience and relationship with urine.

At what age can you start using urine and who does it help the most? Urinothrapy is a treatment for jany age.There is no need to immediately decide that you will drink urine.Urine works best on the human organism through the skin.The infant still urinates and washes his body with urine. Proceed in the same way, applying poultices and smearing your body with urine. If the child falls behind in his development, immediately start urinothrapy, massage him with urine, give him to drink his own urine, boiled with honey, but only once a day, in the morning 50 - 100 grams.

It will be interesting, let's say in ten years, to compare the health status of children whose richer mothers could treat them to various types of panties (look how beautifully dry that ass is), and children who naturally peed in their diapers and thus actually they used urinothrapy from a young age. I believe that children who used to urinate until late in life have healthy urinary and sexual systems today. At least for me it is 100% true. Whenever I start studying the human body, I am always surprised by the enormous sophistication and harmony of its systems and organs, I bow in deep humility before its intelligence, which is many times higher than our thinking mind. I am therefore convinced that if nature wanted the child's body not to bathe in its own urine from the diapers, or rather from the mother's womb, it would certainly have arranged it differently and would not have waited for the invention of some bobby pants.

Urine therapy is most helpful to those people whose internal environment is strongly alkaline and there is total decay in the entire body. This is especially common in older and senile organisms. Therefore, taking urine gives the best results in such cases.

Example:Patient, 76 years old, after 4 operations, sepsis at 46 years old, exudative pleurisy, hypertension, tachycardia, extrasystole, gastritis, diseased bile ducts at the same time. She started urinothrapy by drinking 400 grams of urine a day. After a year, severe diseases disappeared: arrhythmia, pain in the digestive tract, in the head, in the coccyx area and high blood pressure. More secondary problems also stopped: the consequences of pleurisy in the left side, pain in the neck area, problems with vision and swollen arteries in the groin area, no colds, the fat tumor on the breast, stomatitis, hemorrhoids disappeared, the hair stopped falling out and became much better, thicker. Stool normalized, bloating and heartburn stopped. Her ribs have also stopped hurting as a result of the illness, and her head no longer spins when she bends forward. The excessive appetite has disappeared and the patient no longer suffers from painful cramps at night. Outside, her eyes no longer water and the dark spots, "flies" and serrations have disappeared. Varicose veins (inflammation of the veins) also subsided and sleep improved.

Example:Female patient, 70 years old. "I have been practicing urinothrapy for 4 years and I will tell you about my results. First of all, the humming in my head stopped, I can hear in my left ear again, my hands stopped shaking and my fingers and toes became free, the stones came out of my gall bladder and sand was secreted for three months. Her knees stopped swelling. I cured my cataracts by washing my eyes with urine. The doctor also confirmed this. But otherwise I don't tell the doctors anything, because they wouldn't believe me that I cured my diabetes with urine. I don't have sugar in my urine or in my blood, the doctor praises me for following my diet. I didn't admit to him that I was drinking urine. For about five years I had severe pain in my spleen. Here, too, I cured compresses with urine, which I put on for 10-15 minutes. When I drink urine three times a day, it feels like jackhammers are working in my gallbladder. I can even hear the rocks crunching. I also cured my hemorrhoids and varicose veins. All my life, the skin on my feet and wrists cracked, so I couldn't walk barefoot for years. After bronchitis, I often had colds and chills. In the summer, I wore a fur vest at

home. And now it's 14 degrees in my apartment, I walk naked after a bath and I don't die. I gained immunity. I had periodontal disease and 13 teeth were pulled out in three years. Nevertheless, the purulent pockets in the gums did not disappear. Thanks to urine and regular gum massage, all dental problems stopped. I stopped visiting doctors, they don't help a person anyway. I once had an infection in my left ear and I stopped hearing them. After washing my ears with urine, my hearing returned and I can hear very well. I cured my daughter's eczema and my granddaughter's asthma. An acquaintance of mine had varicose veins and a large open wound on her leg, which festered. After the urine treatment, she was cured. The important thing is that I am no longer tired in the morning (urine has a huge energy charge- note author). I get up early and start doing urine therapy, I feel wonderful. I used to be lifeless, now I can walk like when I was young, no one would guess that I am 70 years old. At the same time, if it weren't for urine therapy, I would have been in my grave a long time ago."

Example: Patient, 80 years old. He started urinotherapy boldly and with gusto. "I drink urine four times a day: at night after 2 a.m., then at 1 p.m. before meals, at 6 p.m. an hour before dinner, and overnight. I used to suffer from chronic inflammation of the gallbladder, prostate (I was operated on here 6 years ago), high blood pressure. I had a massive heart attack. Just serious trouble. I was still on many medications. I stopped taking the pills when I started drinking urine. All trouble has ceased."

Urinotherapy in diseases of the digestive tract

Example: "I suffered from pyoria, periodontitis (infectious gingivitis). Teeth have lost their luster and color. Toothpaste and careful brushing did not help. For several days I massaged my gums with urine and rinsed her mouth. On the fourth day, the unpleasant smell disappeared. I now use this method regularly. Moreover, I found out that urine reduces appetite."

For toothaches, it is necessary to hold the urine in the mouth for about 3 minutes five times a day, if the pain does not subside. Then you put a cotton ball soaked in urine on your tooth. You can try all kinds of urine, quarter urine probably works best.

Example: In the early days of urinotherapy, the elderly patient barely overcame the psychological barrier. She finally succeeded and cured her duodenal ulcer, improved her thyroid function (she was suffering from thyrotoxicosis) and finally survived a complex operation thanks to urine therapy. They removed a huge cyst that encircled and almost suffocated her abdominal organs and a cancerous tumor.

Example: Female patient, 52 years old, sedentary job. "I was lucky to learn about urinotherapy in your book. I don't know what would happen to me. I have been suffering from severe constipation for 20 years. Sometimes I don't go to the party for a week. My female problems brought me to urine therapy. I started drinking urine morning and night for about two weeks. I was so dizzy, I thought I was going to fall. My stomach was also tight. Black sludge came out of me in large quantities, oily black clumps and flakes, sticky and smelly. After that, the constipation stopped and the stool became regular. The neoplasm in the area of the left ovary has disappeared."

Comment and recommendation: Women's problems are the result of severe constipation. That's why you have to monitor the work of the large intestine and regulate its activity with proper nutrition and urine therapy (enemas). Compresses with lukewarm urine on the abdomen and crotch will help with persistent constipation. In the morning, it is necessary to eat food with coarse fiber content - various salads. It also helps a lot to run a little in the morning.

Example: A patient suffering from heartburn and increased stomach acidity. He began to use urine and the difficulty eased.

Comment and recommendation: Urine normalizes the function of the stomach and its

acidity. However, for more permanent results, it is necessary to adjust the diet (varied, separated, with a restriction of meat and dairy products).

Urinotherapy and treatment of infectious diseases

The treatment of various infectious diseases with urine therapy is very effective precisely because of this interference and nosody effect. The methodology is very simple: you need to drink 50-100 grams of urine, if possible at once with as few odd sips as possible. During fevers, highly concentrated urine is formed, which is not very pleasant to the taste. Its taste can be improved by drinking plenty of water melted from the ice and in addition brewed or herbal tea. To reduce the temperature, use an old recipe - put a compress with urine on the pulse.

Example: "When I got the tremors in conditions of complete solitude and without medication, I remembered urine therapy. Mother nature gave us the best medicine. After a glass of urine, which I drank at once, I was well in five minutes. Nothing like that has happened to me more than once.'

Example: "It was during the war. There was no anti-malaria medicine and the doctors said I was going to die. A single duralumin cup of urine drunk at once brought me to my feet. The attack of malaria has not recurred.'

Also, John Armstrong in his book "Living Water" mentions the treatment of fever with urine: "The efforts of doctors to reduce the temperature by unnatural means only hinder nature in the healing process and in some cases even endanger the patient or sow the seeds of future ailments. The high temperature is actually a healing process given by nature that it has in the body to destroy the sick person with poisons. They talk about the miraculous effects of fever medicine, but many people die of heart disease after just such treatment.'

"I know from my own experience that the most effective and safe way to treat high fevers is fasting while drinking urine and water. The high temperature will always decrease in 36 to 37 hours, and a complete recovery will occur in a few days. Urine in such patients is usually scanty, thick and unpleasantly smelling. This can be explained by the fact that the body loses a lot of salts and other necessary substances. This is associated with great weakness of the patient, a feeling of emptiness in the head, delirium, etc. Urinotherapy helps the patient regain lost health. I have proved this many times by curing dysentery, chicken pox, mumps, influenza, fever and other diseases with high temperature. There were no complications, which are so common with normal procedures treatmente.g. mumps or rheumatism. The complication is the result of measures that suppress the disease, but also the defenses of the entire organism, and which destroy our body."

These words of Armstrong, recorded many decades ago, have not lost their meaning even today. Use this valuable advice and you will be healthy. Finally, one more simple but illustrative one example from everyday life: "My daughter's eyes were so festering that she couldn't open them in the morning. Her eyelashes were glued together. Therefore, she began to wash her eyes with her own warm urine, and in a few days everything passed."

Urinotherapy and fungal skin diseases

According to Russian academician Bolotov, pathogenic (disease-causing) microorganisms of plant origin parasitize humans and create an alkaline (putrefactive) environment for their development. They parasitize especially in cases where our acidic "spacesuit" is weakened. A simple strengthening of the acidic properties of the skin with the help of ordinary urine leads

to rapid healing. Here it is most effective to apply compresses with urine on the affected areas.

Example: "Unfortunately, I only learned about the possibilities of urine therapy a year after breast surgery and removal of lymph nodes. After the operation, I was irradiated and underwent chemotherapy three times. After the third course of treatment, my hand became very swollen. They told me it was lymphofibrosis. They gave me more medicine, the swelling went down a bit, but other complications arose and I had to stop the treatment. I started treatment with herbalists, I cleansed my liver. But then, while treating my hands, I poisoned myself with too concentrated herbal decoctions. I couldn't drink them anymore. And that's when I learned about urine therapy. I thought I'd give it a try, I had nothing to lose. Without prejudice or difficulty, I immediately started drinking 100 grams of morning urine. I also wash her eyes and ears. I got rid of the allergy almost immediately. I do mini enemas with evaporated urine and water. I massage my hands and feet with morning urine, and after the massage I apply compresses to the sick hand and feet for 1.5 to 2 hours. My fungus is disappearing, my skin has stopped peeling, my hand has also improved. After only one month of urine therapy!"

Recommendation: Do not dilute the urine for mini-enemas (with the help of a balloon) with water, but only evaporate it by half. Gradually increase the concentration to a third to a quarter.

Example: "A kind of fungus appeared on my feet about ten years ago. I treated her with Siberian stone oil, but not completely successfully. The infection remained under the nail of the thumb, which had been bothering me all these years. He gradually blackened and began to relax. During the last march in Siberia, I wore mountain shoes, and after a few days the fungus spread all over my feet again. I already knew about urine therapy. I washed my feet with urine before going to bed. The next day too and that was enough for the mold to disappear. After such success, I began to wet my feet often and abundantly with urine oil (urine evaporated in the sun). In a short time, I eliminated the infection under the nail. She no longer wobbles and sits firmly."

Comment: Urine evaporated in the sun, fermented by bacteria and their enzymes, cleans the skin with extraordinary power. The increased salt concentration helps, as in tears, to speed healing.

Example: "Our cat has developed ringworm. I started to smear it with urine and the lichen disappeared." **Recommendation:** Urine is excellent for boils (sores).

As soon as the furuncle starts to form, it is necessary to rub it gently with urine 3-4 times a day, for about 10 minutes. Leave the urine to dry, do not wash it off. You can also use a plaster to stick a tampon on the furuncle, which you regularly wet with urine. In two to three days, the boil will disappear.

Urinothrapy and kidney diseases

Here it is especially important to understand the causes that lead to kidney diseases and to eliminate them. If you do not do this, the treatment is not very effective and only brings short-term results. One of the main causes of infection in the kidneys and urinary tract (in 70 to 90%) is Escherichia coli. There are also various anaerobes, purulent staphylococcus, enterococcus, bacillus causing blue pus and others. Where do these bacteria come from and how do they enter the urinary system? They all come from the large intestine where putrefaction occurs! These bacteria multiply during them. The intestinal bacillus multiplies and instead of serving the organism, becomes pathogenic or disease-causing. The cause of rotting in the colon is our unhealthy diet. Therefore, the treatment procedure for kidney problems must be as follows: transition to a moderate and separate diet, cleansing of the large intestine

(its acidification with enemas with variously treated urine) and only then direct action on the focus of the disease itself. Many acute and chronic kidney diseases can be successfully treated with urine. The methodology of its use in the given case is very simple: drink 50-100 grams of urine per ex 3 times a day before meals, apply urine compresses with the help of a woolen cloth to the kidney area for two or more hours. Cleansing of the large intestine is necessary, and in severe, neglected cases, fasting on urine and water with massage of the whole body with urine for one to three hours. In particular, this massage will make it possible to significantly acidify the organism and destroy particularly persistent forms of infection in the kidneys. By the way, an infection in the kidneys and urinary tract is the cause of stones and sand. Therefore, the given recommendations are also useful in the treatment of kidney stones.

Why some people's kidneys stop working at the age of 30: Because doctors at jany diseases begin to try any drugs on the sick person and poisoning occurs with these drugs. The kidneys take it away first. The body begins to swell, (water does not leave it), the additional load weakens the heart. A weak heart does not supply the body with enough oxygen and the person breathes hard. Further, it swells, weakens, becomes clogged with waste and poisons, and dies, despite "the most modern methods of treatment."

Drinking urine, massages and various compresses with urine help restore the kidneys, promote urine excretion. It also restores the excretion of wastes and poisons through the kidneys and colon. The work of the heart and the supply of oxygen to the tissues improves. This will be reflected in a significant improvement in mood and restoration of the original body shapes and weight.

Example: Patient, 17 years old: "I had the flu, after which my kidneys got worse. They admitted me to the hospital with a diagnosis of "acute glomerulonephritis with nephrotic syndrome". They treated me with antibiotics, heparin, anti-inflammatory drugs, they gave me 10 injections, 30-35 tablets of various drugs, drips. Nothing helped. Eventually they started giving me hormones and blood. I don't know how it would have ended. By chance, I learned about urine therapy and started applying it myself. After a week, the analyzes improved. Before that, I had two units of protein. I refused hormonal drugs and continued to drink three sips of urine in the morning. After the hormones, I gained 11 kg, my whole body was covered with a rash and my periods stopped. My stomach started to hurt and I was constipated. After two weeks of urine therapy, menstruation normalized, the rash has almost disappeared, the stomach and intestines work as before, the weight has improved."

Comment and recommendation: Here, treatment was done without starvation. It is important to help the body to remove everything unnecessary and it will heal itself. Intensive chemotherapy, on the other hand, can, as in the case of this girl, attract people to drugs until death and hormonal treatment "disrupt" the functioning of the entire organism. Therefore, examine and observe your body, do not entrust your health to other people's hands.

Example: Armstrong tells how he cured a man suffering from kidney stones. An X-ray showed a large stone and the surgeon insisted on its removal, otherwise his life was in danger. The patient, on Armstrong's advice, began drinking all his urine and fasting regularly for several days at a time. His condition quickly improved, the pain stopped, the urine improved. In three months, the examination showed normalization of kidney function.

Comment and recommendation: If poultices made of evaporated quarter urine are applied to the area of the kidneys (on the cross) for 2-4 hours a day, then the cleansing of the kidneys and the excretion of stones takes place much faster.

Example: "My aunt's kidneys were full of stones. Stones were surgically removed from one of her kidneys. The second kidney was supposed to be operated on in half a year, when the first kidney was healed. So far, on someone's advice, my aunt has started drinking my five-year-old son's urine. Half a year later, the surgeon looked at the X-rays and wondered where the stones from the other kidney had gone. Aunt feels fine, only the kidney, which was operated on, makes her angry at times."

Comment and recommendation: A large number of stones in the kidneys testify to the infectious processes that are the cause of their formation. It is usually an infection that entered the kidneys from the large intestine. Therefore, it is first necessary to adjust the diet and clean the intestine. The miraculous effects of children's urine are explained not so much by its soluble abilities as by its extraordinary immune properties. Additional immunization (strengthening of the body's defenses) helped eliminate the infection in the kidneys and the formation of stones. The pre-existing stones then dissolved on their own. But what about a sore operated kidney: First, apply compresses with quarter urine to the area of the operated kidney, second, do short-term fasting about water and urine more often (3-7 days), third, get your diet in order (mainly switch to separate food) and prepare everything with the help of melt water.

Example: "I want to tell you a case of my own healing with the help of urine therapy. The function of my kidneys, bladder and ureters gradually deteriorated. How did I figure it out? First, the urine started to turn red when drinking beetroot juice (even mixed with apple juice). Not always. Then it gradually became more and more turbid, it smelled of ingested food (e.g. buckwheat). The amount of fluid excreted in the urine decreased. I often had discomfort when urinating. The clairvoyant gave me the diagnosis: a tumor in the bladder, sand in the kidneys, a stone in the right kidney. In winter, when the activity of the kidneys is particularly strong, I starved for 23 days. I regularly drank all the urine and did mini-enemas with the urine evaporated to one-half to one-third. In addition, daily hot baths and steam three times a week. Due to the influence of all these means, the kidneys and the entire urinary system were powerfully cleansed and their functions were restored. The urine became a crystal clear healing liquid. Up to 1 liter of urine is excreted at once, so the activity of the bladder has been fully restored and the tumor has disappeared. I no longer have discomfort when urinating. The pain in the lower back disappeared, all the vertebrae returned to their places, the function of the intervertebral discs was restored. The body now produces more heat. holds water better, gains weight quickly.'

Urinotherapy and liver diseases

In Ayurvedic medicine, urine was considered a remedy for the most serious diseases, especially liver diseases. We already know why it was so from what we read. The best methodology for treating the liver is as follows: Drink 50-100 grams of urine 2-4 times a day, make compresses on the area of the liver at night with the help of a woolen cloth soaked in quarter urine. As a supplement, it is necessary to drink a strong decoction of rosehips. If there are no rosehips, just drink hot boiled water.

For example, with obstruction of the bile ducts, bile is secreted by the liver, but cannot reach the intestines due to blocked bile ducts, so it goes into the blood and then into the urine. At the same time, a person feels pain, weakness, wants to vomit, etc. Due to the lack of bile in the digestive tract, fats and proteins cannot be fully digested. Doctors prescribe pills to compensate for the lack of bile. At the same time, all these substances are in the urine. Bile and enzymes from the liver that are contained in the urine can to circulate repeatedly and not get lost. Therefore, the return intake of urine helps both digestion and normalization of liver functions thanks to the homeopathic principle and flushing of the bile ducts. Hepatitis is inflammation of the liver of viral or bacterial origin.

Example: "I have been drinking urine every morning for over a year and three months and doing massage with steamed urine. The results are positive, angina and colds have stopped bothering me, I sleep like a baby, I work all day at the cottage without fatigue, osteochondrosis makes me less angry, the liver is normal. I had cleansed my liver three times before, which came out with a lot of black bile and softened stones. And even before that, I

was treated by a doctor for my liver, from which 16 large stones and a whole glass of small stones came out.

Comment and recommendation:After cleansing the liver, the diet was not changed, so the stones continued to grow. The urine diluted the bile and improved the liver, but it is necessary to change the diet and follow the diet.

Example:"Through urine therapy and one-day fasting every week, I cleansed my intestines and liver and subsequently got rid of depression and severe hypertensive crises, which mostly came between 3 and 5 in the morning. I also cured my hepatitis. I practice a separate diet and I got rid of constant bloating in the intestine.'

Urinothrapy and diabetes

Urina copes well with this ailment. In this case, it is recommended to drink 50-100 grams of urine 2-3 times a day, to cleanse the intestines and liver, and to make poultices on the area of the pancreas with the most suitable type of urine. In the initial stages of diabetes, you can apply an enema with Shankprokšalana, with the addition of slightly salty water, evaporated or activated urine. This enema is recommended to be done once every three days until complete healing. The total amount of liquid is from 3 to 4 liters. The ratio between salt water and urine is about 3 liters of water per 500 grams of evaporated urine.

Example:"I once met a group of old people on a train who were full of energy and had a healthy complexion. When I asked how they maintain such health, they replied that they have cured all diseases, including diabetes, with urine therapy and feel young. At that time, I had been suffering from severe diabetes for many years, the blood sugar content reached 29.7 units. After meeting on the train, I started drinking my own urine every morning for about two months. I didn't follow any diet. Blood sugar dropped to 5.4 and there was none in the urine. I maintain this state to this day."

Next follows a series of excerpts from letters from one and the same person, showing how to fight diabetes and related diseases.

Letter #1:"I have had diabetes for seven years and fungal eczema for five years. I started treatment with urine therapy. I drink urine three times a day, I massage my hands, feet, neck and face with a quarter's urine once a day after 11 p.m. However, one thing was killing me: at first my penis became red and swollen. I couldn't even touch him. I consulted an endocrinologist and a urologist. I didn't take any medicine except urine. Shall I continue?"

Recommendation:Cleanse the colon and liver. To better cleanse the body of harmful substances and waste, go to the steam or sauna more often and do not eat artificial, refined foods.

Letter #2:"As I've written before, I have diabetes and eczema... I've done a colon cleanse and cleansed my liver twice and my kidneys once (with sunflower oil). I cleaned my joints with rice and bay leaf decoction. I starved for three days a month. Eczema is slowly receding, it has almost disappeared from the palms, there is still rough skin on the feet. I have applied the poultice to my limb several times as per your advice and have no more problems. Rub the hands, feet and limbs with a quarter's worth of urine daily. However, I have another concern. In the last letter you advised me to omit bread from my diet, because my body is heavily clogged with phlegm and slime. Should I give up all bread and for how long? Otherwise, I visited the steam room and felt wonderful. I've been single for five years due to eczema. I no longer take medication for diabetes and treat eczema only with urine. I'm in a good mood. I'm just asking for answers to questions about bread and eczema on the feet.'

Recommendation:Continue to cleanse the body, eat only natural products and cook only

with melted water.

Letter #3:"I will describe to you the result of my treatment. Recently, I drink urine three times a day and at the same time rub a quarter of the urine on my feet and palms for 5 to 10 minutes. I starved four times, twice for two days and twice for three days. I pass urine 5-6 times a day and have eliminated bread and pastries from my diet. In the past two months, I have cleansed my colon twice and my liver five times, washed my kidneys once with rosehip root decoction, drank melted water, bay leaf decoction and ate rice, porridge, salads and potatoes. At the same time, I also cured hemorrhoids with urine therapy, and it seems diabetes too: in any case, its symptoms disappeared, such as sweating, weakness, dry mouth, etc. According to your advice, I go to the steam room every day. The feet are cleared of eczema, but slowly. Eczema on my palms no longer bothers me. I await further advice.'

Recommendation:Supplement the diet with sprouted grain (stimulation of the body with group B vitamins and trace elements), instead of massages, apply poultices with one-fourth evaporated urine to places with eczema (use it more often at all) and fast for longer than two or three days in order to achieve a deeper cleansing of the organism.

Letter #4:"I have not been able to completely cure my eczema. I ate sprouted grains on an empty stomach, put compresses on my feet with evaporated urine, didn't eat bread or pastries for a month, and starved myself for a week. I drank evaporated urine twice a day. I follow a diet, eat only salads and porridges, drink juices, but I have not achieved a complete cure. Although my feet are almost eczema-free and my palms are clean, my urine and blood sugar levels are close to normal. Anyway, I improved my health with urine therapy.'

Comment and recommendation:Only five and a half months have passed since the beginning of the treatment, yet the disease was long-term: diabetes for seven years and eczema for five years. The diabetes has practically disappeared and the eczema must still be tried to remove the compresses with evaporated or standing urine - the rough skin will then peel off better. The combination of acidification and alkalization of eczema with these two types of urine will strengthen the effect of urine therapy. Salads or stewed vegetables, porridge, meat and the like should be eaten, but only according to the principles of a separate diet. It is necessary to cook only with melted water, eat sprouted grain bread more often.

An interesting case of curing diabetes is described by A. Maslenikov, one of the founders of Russian urinotherapy: A woman cured herself of "terrible" diabetes within one year by drinking her child's urine every morning and then freshly milked milk. By the way, Avicenna already talks about such a comprehensive treatment of diabetes with urine and milk in his "Canon of Medical Science" from the 11th century: "Human urine and camel urine, especially together with its freshly milked milk, helps with dropsy and hardening of the spleen." Thus the words of the Prophet are confirmed: 'If you drink milk and urine, then you will surely be healthy.'"

Comment:Such treatment is suitable only for people who tolerate milk well. Urine helps to stimulate the functions of the pancreas, activating its enzymes. Freshly milked milk in small quantities is an ideal food that is processed by its own enzymes. In addition, freshly milked milk has a special energy that also helps restore the structure and thus the functioning of the pancreas.

Urinotherapy and diseases of the heart and blood vessels

Here, it is primarily necessary to purify the blood and remove various clots and deposits from the bloodstream. Before cleansing the blood, the large intestine must first be cleansed, and in order to achieve free blood circulation, the so-called portal hypertension must be

removed, i.e. the liver must be cleansed. The substances contained in the urine will do everything else: they will help the heart muscle and stimulate it, dissolve thrombi. It is recommended to drink an odd number of sips 2-3 times a day after 50-100 grams of urine.

Example: "For three weeks, I collect the middle part of the urine from 3 to 4 in the morning and drink 3 sips of quarter urine. It seems to me that the large intestine has started to work, the comb between the stomach and the duodenum works better, the stomach is softer and the heart works better. So far I have undergone 8 surgeries under general anesthesia. Among other things, they removed the bullet from my liver."

Example: "I am 54 years old, I am already retired, I felt very bad, I had injections twice a year, I suffer from rheumatoid carditis and I have a heart murmur. By chance, I got hold of your book, where you also write about urinothrapy. She helped me a lot. I haven't had any injections for half a year now, I drink urine and smear myself with it. I starve twice a month. I feel much better."

Example: "I am 54 years old, I have been suffering from high blood pressure for 8 years up to 200 to 120, my head is spinning. After only ten glasses of urine drunk on an empty stomach, my blood pressure dropped."

Example: The patient, 64 years old, suffers from high blood pressure, atherosclerosis, ischemia of the heart, varicose veins on the legs. For a month and a half, she drank urine 3 times a day, smeared herself with it and followed a diet. The results are good: blood pressure 130/80, venous nodes on the legs have disappeared and heart function has improved.

Example: "Patient swollen to the waist, 'elephant' legs blackened to the knees, swollen hands, black wrists, sores. After many months in the hospital, she went home to die. A neighbor gave her faith in life and a book on urine therapy. She stopped taking medicine and started drinking urine, doing massages, enemas, for the first time with a man's urine. She starved for seven days. Black lumps started coming out, the swelling didn't go away, but it didn't get bigger either. The patient has a weak heart and cirrhosis of the liver. Please advise what to do next?"

Comment and recommendation: Always apply poultices of evaporated quarter urine to the area of swelling and wounds, pay close attention to enemas - all problems come from the large intestine. Continue with urine intake and fasting. Vomiting and passing black sludge are symptoms indicating the beginning of the cleansing process. So it is necessary to continue, drink more urine, use melted water. If the condition were to worsen, but at the same time pathological waste products were being excreted, this means a cleansing process and a healing crisis. You have to overcome them. If you're getting worse without these symptoms, you've let the disease go too far.

Cloudy and at the same time strongly smelling urine indicates a body heavily clogged with waste and poisons. In particular, the intestine and liver are affected. That is why cleansing procedures are so important for relaxing the body. For heart problems, the best massage is from 11 a.m. to 1 p.m., when the heart channel works and the procedure goes straight to the point. In addition to massages, compresses from evaporated urine must be applied to the heart area. Eat sprouted grain bread or 2 to 3 tablespoons of sprouted wheat per day. It is quite possible that one of the main causes of heart disease is clogged, intoxicated small intestine.

Urinothrapy and eye diseases

The methodology is simple - the eyes are washed with urine, in more complex cases compresses are applied to the eyes from fresh urine combined with fasting. Baby or activated urine helps a lot. For cataracts and other eye diseases, boil 50 grams of honey and 100 grams of urine and evaporate the mixture to about half. We drop it into the eyes for 5 drops several

times a day. We start the dosage with 1 drop.

Example:"A metal splinter or splinter got into my eye. Fresh urine was used for treatment: every 30-40 minutes washing and compressing the eye. The swelling disappeared in 7 hours. Hyperemia of the mucous membrane of the eyelid and sclera (white of the eye) in 12 hours. The pus stopped excreting already in 5 hours after the start of the treatment.

Example:"After a cold and inflammation of the cornea, a dark spot appeared. I was in the hospital for a month with no result. They told me the spot would go away on its own, but it didn't. Even dripping urine into the eye and nose helped."

Example:"The doctors gave me a diagnosis: cataract, or gray cloud of the eye. I couldn't read, after five minutes of reading everything was pouring out. Medicines did not help. After two weeks of washing the eyes with urine, the sight improved.'

Example:A patient with congenital cataracts in both eyes decided to use urinothrapy while starving himself of water and urine. After nine days of flushing his eyes with urine, he stopped fasting because of his stomach. Vision improved and the shape of the cataract itself changed somewhat.

Comment and recommendation:In his book "Living Water", John Armstrong writes that in many cases, after 10 days of water and urine starvation, the cataracts dissolved. It was necessary to starve for a maximum of 28 days. Such a period is necessary for congenital cataracts, where it is necessary to apply poultices of urine evaporated together with honey in a copper vessel. Similarly, glaucoma can be treated with urine therapy, but before surgery.

I verified for myself the extraordinary effectiveness of the action of urine on the restoration of sight. I've been wearing glasses since I was 30, at least for TV. My eyes often hurt. Now, at 55, after cleansing steps and urine therapy, I have the eyesight of a perch. I can see well without glasses, but mainly I can sit for 5-6 hours at the computer or over a book without feeling tired.

I recommend to everyone the neti method with flushing the eyes with fresh urine. I recently helped my sculptor friend. Due to the constant contact with the stone, the whites of his eyes were bloody and literally cut up by small fragments of sandstone. In the morning, droplets of "stones" hung from his eyelids. He brought a supposedly miraculous eye cleaning agent from the US, but it didn't help him. After several weeks of flushing the eyes with fresh urine, the sclera cleared and the vision improved considerably. The results would have been even more pronounced if my friend had followed certain eating rules and not sat so often at "The Black Ox's" or "The Fishermen's". Although who knows, the personal mood that such a sitting in a pub brings, sometimes it will cost a few cleansing barks. The soul is primordial.

Urinothrapy and cancer

Urine healing is incredibly effective for various tumors, including cancer. In simple cases, it is enough to drink urine and apply compresses to the affected area, or lubricate with urine. In chronic cases, it is necessary to combine starvation with urinothrapy and clay compresses with boiled urine. We'll show you how it's done with a few examples:

Example:"I have a birthmark on my temple. The skin after smearing the urine is softer and better, but the mark has not disappeared. So I started making poultices with urine left for several days. After a week, the birthmark ruptured and oozed pus. It started to hurt behind my ear all the way to my collarbone. After further compresses with evaporated urine, the pus stopped flowing and the pain disappeared.'

Comment and recommendation:This woman must first go through the entire course of healing steps: cleanse the intestine, liver, blood vessels and tissues, go to the steam room or

sauna more often. Continue compresses with evaporated urine on the mole area.

Example: "My wife accidentally tore off her birthmark on her back four years ago. A scar formed that did not heal all these years. No treatment helped. Occasionally a scab would form, but the wound would reopen and be an unhealthy, dark red to blue color. After compresses with evaporated urine, the scar disappeared. The skin in its place is a healthy, pink color."

Example: "One time I had severe breast pain and induration. I should have gone to the hospital, but drinking urine in the morning and at noon and compresses helped me. Also, breast inflammation during breastfeeding disappeared practically within a few hours after compresses with baby's urine."

Example: "Six years ago I had a cyst removed from my right ovary and now the cyst has reappeared on the left. The doctor advised me to have surgery. I starved for 10 days and drank 75 grams of urine 4 times a day. The cyst first shrunk by half, and then they didn't detect it at all. Just a miracle."

Recommendation: This woman writes that she had constant bowel problems. These must be removed by thorough cleaning, because cysts are the result of a clogged intestine.

Example: "The nurse has mastopathy of the right breast. They irradiated her 24 times! Everything was fine for a long time, but then the breast became inflamed again and turned red. The nurse did not go to the hospital and began to be treated with urine therapy: drinking urine, compresses, massages with urine plus 10 days of fasting. Two days after the fast, blood serum began to flow from her chest. The temperature decreased and the redness subsided. The only thing that scares me is that the blood was sometimes dark red. What to do next?"

Recommendation: It is necessary to starve only after thorough cleansing of the body. Already at the beginning of the cleansing of the intestine, liver, etc., it is necessary to drink urine twice, three times a day, 100-150 grams each, and apply compresses made of urine, according to one's choice, preferably in the form of clay compresses, so-called cataplasms, to the breast. If the problems do not go away even after a month, then it is necessary to proceed with water and urine starvation.

Example: "I had a bad cold and cough for about three months. An acquaintance advised me to drink urine. I didn't have to prepare for it in any way, I was already drinking kerosene. I started drinking half a glass several times a day without changing my diet. In a week the cough got over me. In addition, the swelling of my lymph nodes disappeared within two months."

Example: "The neighbor suffers from bladder cancer. After cleansing her bowels and drinking fresh urine, her urine output returned to normal after five years."

Example: "I had a malignant tumor the size of a pea in the corner of my right eye at the base of my nose. I started treating him with urine. I didn't rub it, just touched it lightly. Two weeks later I found out one morning that the tumor was gone."

Example: "I follow your advice and without starving, I got rid of hemorrhoids, pain in my legs and lower back in a year, I forgot what a cold is and inflammation of the upper respiratory tract and sinuses, even an enlarged prostate, which the doctors already wanted to operate on me twice. I am a war invalid."

Example: "I want to tell you how my mother treated herself with urine 20 years ago. The diagnosis was: a tumor and rupture of the small intestine. She drank urine several times a day without ceasing. The crack healed and the tumor disappeared. The treatment was advised by a woman who cured herself of small intestine cancer with urine."

Example: "My five-year-old daughter began to have trouble hearing due to polyps. They operated on her twice, but the polyps reappeared. That's why I started to drip into my

daughter's nose her fresh urine half a pipette into each hole as many times a day as she peed. The treatment lasted two weeks, and I dripped evaporated urine into her ears. The result is 100% hearing. At the same time, the doctors determined the diagnosis: deafness of the 2nd degree."

Example:"The patient hit herself in the chest three years ago. A tumor the size of a hen's egg appeared at the site of the bruise. The doctors decided on an operation. The patient was afraid of the operation and began to drink urine in the morning and evening, at night she put compresses with heated urine with a teaspoon of soda and a teaspoon of vinegar. After severe itching and even burning of the skin, she stopped using the compresses for a while, but then resumed them again. Within a month, the tumor had shrunk considerably and they canceled the operation. After another month, the tumor completely disappeared.'

Comment and recommendation:Never add the above ingredients to your urine. It was these that caused the skin burns.

Example:"We got acquainted with urine therapy when our family was hit by an accident. My father (51 years old) was told by doctors that he has terminal cancer of the pharynx and it is too late for surgery. They suggested radiation. However, we rejected this because it has helped few people so far. At first, the father also refused urine therapy, but then he started drinking urine with compote and drank it down with water. A year has already passed and the father is alive. Although he experienced a severe crisis associated with vomiting, severe coughing, discharge of pus and temperature. We were afraid that he was about to die, but then we understood that the process of purification had begun.'

Comment:Compresses made of evaporated or children's urine should be applied to the pharynx area, preferably from a child under five years of age. Cleanse the intestines and liver. Gargle the evaporated urine as deeply as possible. It is necessary to change the diet.

Example:"A patient with blood cancer persistently treated herself with urine for a year, drank it, did massages, compresses. She was healthy in a year.'

Example:"The patient spent many months in the hospital with cancer of the lymph nodes. The analyzes were getting worse. He feels much better after drinking the urine. Today his skin color is healthy and his blood is fine.'

Example:"Sick, 30 years old, anemic, cancerous breast tumor the size of an egg. She refused surgery. She started starving for water and urine. She drank 1.5 liters of water a day and the man massaged her whole body with urine for 2 hours every day and applied compresses to her chest for 24 hours. She recovered in 10 days. The doctor found no trace of the tumor and the blood also improved.'

Comment and recommendation:The combination of two strongly acidifying factors, such as starvation and urine therapy can work wonders.The healing bark can be improved by poultices and massages with quarter urine and colon cleansing with irrigation.

And now some examples with tumors of a different kind:

Examplewith the use of standing urine: A child (10 years old) developed a subcutaneous tumor the size of a dime on his foot, which grew in size and interfered with the child's walking. The surgeon suggested cutting out the tumor while it was still small. The mother decided to treat the child with urine. After three compresses with standing (old) urine overnight, the tumor shrunk and disappeared.

Example:"I was scheduled for surgery on a lump or hematoma on my head. After seven days of urine and water starvation and clay compresses with evaporated urine, the lump collapsed. I turned to the doctor to clean my wound. What's next?"

Recommendation:Continue compresses with evaporated urine or fresh urine of the child until the age of five.

Example:“I ate grapes that had been sprayed with Bordeaux. After that my throat swelled up and I couldn't eat or speak. I didn't go to the doctor and started gargling my own urine. In three days the swelling disappeared and everything was fine.’

Urinotherapy and diseases from colds

Drinking urine and gargling bring excellent results in cold diseases. If we add washing the nasopharynx, then the nasal and frontal cavities and adjacent areas of the brain are also cleaned. Urinotherapy quickly and radically cures any cold.

Example:“I drink nine sips of urine on an empty stomach, wash my nose with it. My throat hurt all my life, I had chronic tonsillitis. Now I drink iced kefir or water and have no problems.”

Example:“I started treating myself with urine. I drink it in the morning on an empty stomach and one day a week I fast only on water and urine. I rinse her mouth, nose and treat my gums. Spring came and I didn't catch a cold, that's a miracle. My nose is clear and my throat doesn't hurt. Previously, I was sick six times in a year. My gums have strengthened.”

Example:“I regularly drink urine in the morning on an empty stomach and sometimes during the day after 200 grams. During that time, I cured my hemorrhoids and constipation. After about two months, I got a bad cold and blew pus from my nose for a month.”

Comment:One often cannot even imagine how one can have a head full of mucus. The intake of urine, especially washing the nasopharynx, displaces this mucus, which often comes out in the form of a purulent mass. In most cases, the sense of smell and hearing will improve and the headaches will disappear. This also happened in the previous case: mucus began to be secreted from the area of the nasopharynx, frontal and nasal cavities. This is a very good phenomenon - the body gets rid of pathology. Therefore, it is necessary to wash the nose until mucus and pus are excreted. Then you will just rinse your nose regularly in the morning with fresh urine.

Example:“My ears hurt, I couldn't hear well and pus was flowing from them. I couldn't breathe through my nose. After washing my ears and nose and gargling with urine every morning, I got rid of the problem and am generally less sick.’

Next **pproverb** clearly shows head congestion due to chronic constipation: “I suffer from headaches, buzzing in my ears and in my head, I am losing my hearing. I have been constipated for 15 years. I have now stopped taking the medicine and drink my own urine after five o'clock in the morning on an empty stomach, dripping it into my nose and ears. After two weeks, my nose and mouth started to run mucus and thick pus. It went on for three days, continuously, endlessly. What should I do next? Enemas? The doctors gave me a diagnosis: stenosis of the auditory arteries, ischemia of the blood vessels of the head, constant headaches, dizziness, unsteady gait. What they didn't do to me. The drugs, the constant drips, the injections into the veins. They told me that I had to come to terms with my condition, because they said nothing could be done with the vessels. Only after reading your book did I believe in a positive result. How do I proceed?”

Comment and recommendation:Man really has no worse enemy than himself. If this woman cleaned herself in time, ate right and got rid of constipation, she would not need anything. Due to her fault, as well as the fault of the doctors, there was a double contamination of the body with harmful substances - constipation and drugs. At the same time, the doctors are not right that nothing can be done with the blood vessels. Their hardening is treatable at any age and in any condition, you just have to give the body a chance. In the case of this seriously ill woman, the urine quickly began to clean up even in such a congested organism. It is necessary to rinse the nasopharynx, drink morning urine,

clean the colon and liver. It is necessary to switch to a separate diet, prepare everything with the help of melted water, eat sprouted wheat and go to the steam room or sauna more often. In the given case, additionally paint your head with urine, fresh one day and smelly the next. And so alternate it until complete recovery.

Repeated appeal to readers: Before treating the heart, head, lungs, skin and other organs, cleanse the colon, liver, kidneys, blood vessels, joints and lymph according to the seven-point program I described in my book "Doctor Yourself". Adjust your diet as well. These are the basics of holistic medicine, or treating the body as a whole. If even then the disease does not go away, turn to medical procedures such as fasting, water peels, the use of living and dead water and, above all, urinotherapy.

Urinotherapy and skin diseases

In case of skin diseases, urine is mainly used for drinking and enemas. First, the colon and liver must be cleansed. After all, they say that skin diseases "sit" in the gut. Only then can you start to lubricate and cover the affected areas with urine. You can use all variants: to remove dead skin and footprints, very old, stale urine (evaporated and plain), for healing wounds - children's, activated, evaporated, for softening the skin - your own fresh or children's urine. They had you should also change your lifestyle and especially your diet. You need to clarify what caused the disease and what are its causes.

Example: "I got shingles. I took medicine for a week, but without result. I started starving myself and drinking my own urine. It was very bitter and salty, so I stopped drinking it. I just rubbed the cold sore with urine and it reduced the pain a lot, even more so than the herbal decoction the herbalist prepared for me. I starved for water and urine for a week. In a month, even without medication, my cold sore disappeared."

Comment: In this case, starvation replaced cleansing procedures and caused a strong acidification of the organism, which beneficially aided healing.

Example: "Obsolete sebaceous sebum and dermatographism (hard and rough to the touch skin). The first weeks of urine therapy brought a very good result. However, as a reaction to the cleansing process, I developed a rash that I could not get rid of for a long time. A vegetarian diet, enemas, drinking urine and regular fasts once every four days helped me."

Example: "I was always quite sick. At first I was troubled by cold sores. I was treated by a dermatologist for a long time, but to no avail. I started to rub my standing urine. The itching went away and the cold sore (on the buttocks) also disappeared very quickly."

An example from John Armstrong's book "Living Water": A patient starved of urine and water for a week in June and a week in September. During the fast, he smeared himself with his own urine three times a day for one hour each time. He was completely cured and then drank morning urine daily for ten years. Today he is 70 and looks 55.

Comment: Psoriasis and eczema are best treated with urine therapy if they are not too old. Lupus (cutaneous tuberculosis) is also treated, but it is a much more difficult disease and requires longer treatment.

Example: "I have suffered from psoriasis for fifteen years and a year ago, when the disease worsened, I turned to the doctor, who started treating me with hormonal preparations, 8 tablets a day. After reading your book, I started urine therapy and reduced my medication intake to 2 tablets a day. My condition worsened sharply, my joints hurt, my skin was covered with scabies. My doctor, candidate of sciences, again prescribed me 8 tablets of dexamethasone a day. There was even more deterioration. At the same time, they did hemosorption and plasmaphoresis (blood and lymph purification). At first it was better, but after reducing the dose of hormones, the condition worsened again. I would like to get rid of

hormones and start treatment according to your book from cleansing steps, starvation, etc. I think that the doctor who is treating me does not know how to proceed, even though he received a candidate of science for his dissertation on psoriasis. He simply made me a cripple and I think that such use of hormonal preparations was unnecessary. Please advice, you are my last hope. I am 32 years old and disabled.'

Comment and recommendation:Reading such a letter makes one want to cry. How easy it was to get rid of the problem and what it came to. What to do? Above all, rid the body of all waste and poisons, cleanse the intestines with enemas, the liver and other organs with cleansing peels with a minimal intake of hormones. Exclude food that pollutes the body with harmful substances, especially artificial, refined products. Switch to a separate diet, eat only twice a day, without snacks and feeding in front of the TV. After a month or two of such preparation, try fasting, at least weekly. Go regularly to the steam room or to the sauna, drink melted water and cook from it.

Example:"I suffered from skin tuberculosis (lupus) for a long time and I just want to tell you how I cured it. I have cleansed my liver twice. I have undergone a course of therapeutic sweating and continue with warm baths with fir oil. I cleaned my intestines twice with an enema with the addition of swallowtail juice (each time after 25 days). I drink urine and smear it on myself in monthly cycles. In between, I drink herbal decoctions from the swallow. I feel much better, I am in a good mood and sometimes it seems to me that I am completely healthy. But suddenly my joints start to swell and I'm in pain, although not as much as before. I even exercise, which I couldn't even think about before. I just revived, I switched to a separate diet, my intestines work like clockwork, I lost 14 kg. What should I do next?'

Comment and recommendation:It is necessary to clean the liver and large intestine several more times with quarter urine. Swallowtail is not suitable for this cleansing - it dries the intestinal mucosa and is only suitable for obese people. The diet should be enriched with sprouted wheat and bread made from it. Continue therapeutic sweating. Weight loss is explained by the breakdown and elimination of pathologically altered tissue. Once it all comes out, you'll start gaining weight again.

Example:"I read about an Indian man who suffered from vitiligo (leucoderma), which is white spots all over his body, for 15 years. By drinking urine and rubbing his skin, he not only reduced the size of the spots, but gradually removed them. The skin regained its natural color and the hair darkened again. Moreover, by rinsing the nose with urine, the Indian improved his eyesight.'

Comment:Here it is possible to cite the words of the famous Russian healer Panfelia Engalichev from the old days: "Obsolete sores and ulcers are healed by compresses from urine." It also treats various lichen, scaly, and psoriatic spots with itching, and painlessly expels and burns away all impurities, firming the skin at the same time."

Already in Yemen, I received a nice letter from Mrs. Marie from Olomouc, where she writes that the chapter on urine therapy in my book "Doctor Myself" literally shocked her in the pleasant sense of the word. A year ago, a colleague at work told her under the guise of secrecy that it is good to paint minor skin blemishes with morning urine. She took it with a grain of salt then. Now he trusts me completely. Such a letter and trust are truly pleasing.

Urinotherapy and salt deposition, polyarthritis

Urine perfectly cleanses the body of salts, restores lost mobility. The method of treatment is simple: we apply compresses to the affected area alternately with very old (aged) urine and evaporated quarter urine. At the same time, we act on the deposit of salt deposition with an acidic and alkaline environment. You also need to drink urine several times a day and cleanse

your colon and liver. It is the malfunction of the exchange of mineral substances in the liver that leads to the deposition of salts. Hot baths, steam, sauna are essential, after which we apply oil, preferably olive, or melted butter to the affected areas.

And now some practical examples:

Example: "I got sick with polyarthritis at the age of 28. I was pregnant at the time. For several years, I tried to ward off the disease with compresses, but my joints gradually swelled and I could not even put on boots in the winter because of the pain. My fingers also became inflamed and swollen. My liver was angry. I started fasting one day a week and cleansed my intestines, liver, kidneys, joints and blood vessels. After the liver cleanse, the swelling on the hands disappeared, but the joints continued to hurt. I lost 10 kg. I felt better, but my liver often hurt after a hearty meal (I had a terrible appetite) and the arthritis did not stop. In addition, my menstrual cycle was interrupted. Today I know that starving for two weeks was too much stress for the body. Two years ago I also experienced ovarian inflammation. I tried to heal with a good mind, but to no avail. Two months ago, under the influence of my friends' stories, I started drinking a glass of urine once a day in the morning and starved myself for 36 hours a week on nothing but water and urine. About a week after starting urinothrapy, severe stomach problems started, which lasted for about two weeks. At the same time, a large amount of phlegm and slime was secreted. At night, another liver cleansing occurred spontaneously. The stomach problems stopped suddenly along with the recovery of the menstrual cycle. In three weeks I was back to my original weight. I gained 7 kg. After another two weeks, the swelling of the joints on the hands and feet disappeared. After seven weeks of urine therapy, my periods fully resumed and the pain disappeared. After two months of using urine, the stomach and liver also completely calmed down. I even ate more candy during the holidays. Before, my liver would definitely hurt and my joints would become inflamed."

Comment on recommendation: To normalize the metabolism, it was necessary to clean the liver, which was done. However, a lot of mucus remained, which hindered the activity of the entire organism. Urine was required to remove it, which brought a second success. The third success was recorded when the urine normalized the activity of the liver, dissolved salts and eliminated the infection in the joints. The writer made a mistake when she did not change her diet. Sweets, pastries, and bread contain many calcium compounds that the body does not accept and stores in the joints, liver and other organs. If a woman does not switch to whole grain porridge and bread from sprouted grain, the disease will return despite the use of urine therapy.

Urinothrapy and female diseases

"Women's problems" are mostly the result of not following the elementary rules of timely emptying. Constipation, irregular stools are the scourge of today's women, the result of irregular eating, refined foods, failure to follow the principles of a separate diet, etc. In the large intestine, there is an accumulation of sludge, which accumulates there, rots and poisons the surrounding organs and blood. In particular, the organs around the intestine become inflamed and various female diseases arise.

First of all, it is necessary to clean the colon and then the liver. Then start drinking 50-100 grams of your own urine once a day, which you also inject into the diseased areas or soak tampons in. At first, you use your own fresh or baby urine, later evaporated to 1/4. Hot half-baths with the addition of up to 1 liter of quarter urine are effective. At night, it is possible to apply tampons with different types of urine. If there is a violation of the menstrual cycle and other hormonal problems (e.g. growth of facial hair as in men), then you need to drink 100-150 grams of urine 3-4 times a day and lubricate your body with fresh or evaporated urine. In more severe cases, you can drink 50 grams of quarter urine in the morning on an

empty stomach. All these measures will allow you to balance hormonal fluctuations and get rid of discomfort.

Example: "I am 45 years old, I underwent surgery for an ovarian cyst. After three months of drinking urine, my menstrual cycle adjusted and the pain disappeared."

Example: "Erosion of the cervix. I brought the baby's urine to a boil and then cooled it sharply to body temperature. I then injected myself into the affected areas."

Recommendation: It is necessary to use the urine of a child under 10 years of age. The younger the child, the better. Sharply cooled urine is saturated with strong energy.

Example: Enlarged uterus (fibromyoma), pain. Unsuccessful treatment by doctors and healers. She started drinking urine and putting tampons with urine in her vagina. The trouble stopped.

Example: The patient, 20 years old, married, with a child, had inflammation of the ovaries and untreated erosion of the cervix. Very bad analysis. The patient began to use tampons with urine and injections at night. She could not drink urine. She was treated for 14 days. The tests showed that the inflammation is almost cured, the erosion significantly less.

Comment: Own urine is an excellent means of preventing female diseases. Firstly, it adjusts the acidic environment and thereby destroys parasites, secondly, it soothes pain, thirdly, urine protects against unwanted pregnancy. Urine, however, must be injected immediately after intercourse and must therefore be kept at hand. An acidic environment paralyzes spermatozoa.

Example: Diagnosis: uterine fibromatous nodes, ovarian cyst, endocervicitis. Within a month, the patient was drinking urine, injecting herself and putting on tampons at night. The doctor declared complete recovery.

The chapter "Women's Diseases" from A. Maslenikov's book "The Secret of the Drink of the Gods" is very apt in this regard. That's why I choose from her ***typical examples***.

Example: "Several women have told me about the successful treatment of uterine fibroids (a benign tumor). The method of treatment seemed very simple to me: every morning they injected their own still warm urine into the uterus. It is also possible to cure bilateral inflammation of the ovaries. One patient used her young son's urine:

- "How long were you treated?"
- "A week, once a day. If there was a recurrence of a cold, then three days were enough." These injections have a beneficial effect on the entire female genital area.

This is certainly not surprising, because the female sexual sphere is connected to the urinary areas. Nature itself has ensured that this place is reliably protected by the action of urine from infections and other harmful influences. Women's cold problems are easily treated with fresh or warmed urine because it has its own "hot" powers. Urine supplemented with other medicinal substances enhances its therapeutic effect. For example, Avicenna still in the 11th century AD advised women as follows: "Human urine boiled with leeks helps with pain in the uterus if a woman sits in it at least once a day for five days."

Now let's see what urine can do for female infertility. First of all, if the infertility is the result of a disease of the woman's genital sphere, then injections, colon cleansing and tampons on the affected area should fix everything. Secondly, if infertility is caused by hormonal regulation disorders or insufficient development of the female genital organs, then it is necessary to drink urine, do massages with it and add it to sitz baths. Urine, thanks to feedback, adjusts hormonal regulation and enables the normal course of pregnancy. Thirdly, in severe cases it is necessary to starve urine and water for two to four weeks to stimulate the reproductive function. This especially applies to women who have one child and cannot give birth to another at any cost.

And finally: some women may conceive but cannot carry a child to term. What then? First of all, it is necessary to carry out a general cleansing of the body according to the seven-point cleansing program, at least the colon, liver and kidneys must be washed. In addition, it is necessary to massage the body several times a day with activated types of urine (preferably quarter urine, children's urine) and regularly eat sprouted wheat or sprouted grain bread on an empty stomach. Before conception, active movement, gymnastics, running, and contrast showers are necessary. During pregnancy, a woman drinks 50-100 grams of her own urine every morning on an empty stomach.

Another tip on how to prepare sprouted grain: pour the rinsed grain into a larger mug, about three spoons a day, pour a little clean water to make it sufficiently moist, cover with a layer of gauze and place in a warm place. As soon as sprouts about 2 mm long appear, put the cup in a microtene bag and put it in the refrigerator to prevent the grain from sprouting. You take the sprouted grain as needed, grind it in a meat grinder or in a coffee grinder and make patties about 1 cm thick from it, which you fry in oil or butter for 30-40 seconds. You can add dried sprouted grains to practically everything.

Cold-activated urine stimulates the body with incredible force(you store your own or children's urine in a dark place for about 5 days at a temperature of -2 to -4 degrees). It is best to use it on the skin. A massage once a week has a huge effect.

Next pproverb from A. Maslenikov's book:

"While reading Avicenna, I remembered a young woman, 18 years old. Barely married - cyst, ruptured ovary, surgery, inflamed seam. The doctor's diagnosis: the possibility of recurrence, the necessity of removing the second ovary with a high probability that she will never have children. After completing a course of urinothrapy (drinking her own urine, dressing the seams, injections), this woman feels well today, as well as ever. She stopped suffering from the colds that had plagued her all winter. During menstruation, she did not do without sedatives, today everything is painless. But what is important: the woman became pregnant and has a one-year-old son.

Comment and recommendation: Dear women and girls! Watch your bowel movements carefully. If it doesn't work well, it poisons your genitals with its toxins. The first ones symptoms are illnesses from colds and painful menstruation. Sedatives only make your condition worse, they contribute to additional contamination of the body with harmful substances. Remember that urine will help you solve your problems in a natural way, and you will avoid any misfortunes in life.

Urinothrapy in lung disease

According to both Ayurveda and Zhu Shi, all problems and ailments of the body above the level of the diaphragm are caused by excessive accumulation of mucus. This sulcus-like mass increases the "weight" and coldness of the organism. By accumulating in the lungs and chest area, it causes many different lung diseases. Urine, thanks to its "hot" and phlegm-dissolving properties, excellently dilutes and displaces phlegmous wastes and sediments from the places of their accumulation, thus aiding healing. Let's add treatment with nosodes, the anti-edematous effects of urea, and now we understand that it is not nothing more powerful than urinothrapy, starvation and heat treatments. In other words, the best methodology for treating the mentioned pathology is:

- a) drinking 100 grams of urine 2-3 times a day,
- b) wrapping the chest with a woolen fabric soaked in urine for 1-2 hours (the patient sweats and dilute mucus is secreted through the skin),

c) water and urine fasting is very effective (the duration of fasting depends on the severity of the disease). It is best to drink children's urine, which is saturated with immune substances.

Example: The woman was in the hospital with severe pleurisy (inflammation of the pleura) and a large amount of pus and mucus had accumulated in her chest. No treatment helped. Eventually, her mother started bringing her a liquid colored with cherry syrup. The patient began to recover quickly, and the doctors were surprised at what she was drinking. Finally, when the woman recovered completely, they were told the truth: the patient had been drinking her own son's urine.

Comment: Why could this woman not be cured by ordinary means? First, her diet produced large amounts of phlegm, second, the phlegm decomposed and began to fester, creating an alkaline putrefactive environment in the body suitable for the growth of pus bacteria. The effect of drugs on pathogenic organisms led to an even greater weakening of the body, to its poisoning. Medicines were unable to normalize the environment. On the contrary, the son's urine led to a general acidification of the body and thus removed the infection from the source of nutrition. The immune substances of the young organism generally influenced the success of the treatment.

Example: Little girl, 1.5 years old, pleurisy - "ten ribs in the water", which was treated for more than half a year to no avail. The grandmother, seeing the helplessness of the doctors, took the child to her and cured him by her own means: three times a day she gave him to drink his own warm urine, practically all that the child excreted, and used the rest to poultice his ribs.

Comment and recommendation: Pleurisy at such an age is the result of bad eating with an excess of starches, for which the child's organism does not yet have digestive enzymes. Starchy mucilage is secreted by a mountain of mucus and mucus. This is where "water" came from. The urine then acted on the excess water as a diuretic, and the poultices on the ribs warmed the child's body and quickly healed them.

Example from John Armstrong's book "Living Water": "Miss S. was suffering from bronchitis and tuberculosis in the early stages, according to the doctor. Unhappy state. Someone advised the girl to starve herself of water and urine for two weeks, but without massages. In just three days there was a significant improvement, the girl was breathing easily, she slept for several hours without waking up. After the fast was over, she drank urine twice a day and ate twice a day. However, the fast was too short and the disease returned. The girl was advised to continue fasting and perform urine massages. Her diet was also adjusted. The girl made a full recovery. Since then, he regularly receives urine internally and externally, and occasionally starves.'

Comment and recommendation: Starvation makes it possible to eliminate waste from the body more efficiently, but it must be followed for a sufficiently long time. Rubbing urine into the skin, associated with fasting and drinking urine, is a reliable means of acidifying the organism and interrupting any pathological process, including tuberculosis. Bronchitis is the result of excess mucus. It is recommended to exclude mucus and phlegm-producing foods from the diet: milk, starches (bread, bread, potatoes), fats and concentrated proteins (meat, eggs, etc.). Perhaps this woman had a body composition of slime (according to the Oriental categorization) with a tendency to gradually accumulate mucus-like wastes. Therefore, occasional starvation will help her prevent the disease from recurring.

Example: The patient, 37 years old, was demobilized from the Navy. He had suffered from asthma since the age of 14, and the stay at sea probably worsened the disease. During the night, the patient got up four times and breathed aerosol drugs. During three months, he drank 1.5 to 2 liters of his own urine per day and twice briefly starved for two days on only urine and water. His health improved to the point where he stopped breathing the aerosol. His overall condition, especially his mental condition, also improved.

In another similar case, the patient cured his asthma in just 4 days by fasting on urine and water.

Comment and recommendation: People with a slimy body composition are prone to bronchial asthma. That is why the first patient fell ill at the age of 14. In addition, the humid climate increased the production of mucus and led to the worsening of asthma. Sometimes it is enough to change the environment from wet to dry and a person will recover quickly. Today's treatment usually starts with "safe" aerosols and ends with hormones and other "serious" preparations that make people disabled with no hope of recovery.

Due to its "hot" nature, urine dries the body, cleanses and heals it. Even short fasts (36-40 hours), during which only urine and water are drunk, can cleanse the body of mucus. That's why a cold or flu lasts only two days.

Example: Fasting with urine drinking must be done together with massages. Urine-absorbing skin aids metabolism. If something is left out, the expected effect does not occur, according to Armstrong. According to him, health improvement occurs in people of different ages as follows: in youth within 14 days, in 36-year-olds in 42 days, in 55-year-olds in 53 days, in 75-year-olds in 60 days. Armstrong promises not only improvement of general health, but also strengthening of hearing and sight, activity and energy, healthy skin color. (I am 55 years old and for prevention and immunity it is enough for me to drink a glass of morning urine and do an enema with the urine that I collect within 24 hours. I do not do urine massages, I just add decoctions of herbs, salt and part of the collected urine to my bath every day. Now also seaweed decoction.)

After regaining health, it is necessary to continue to take urine, alternate walking with a gentle jog, engage in water procedures and hardening, and occasionally starve as a precaution.

Example: The patient, 51 years old, who had been dependent on aerosol preparations for eight years, cured his asthma in 3 months with the above method. Now he works as a driver.

With bronchial asthma, it is necessary to understand the very essence of the disease - the accumulation of a large amount of mucus and a significant shift towards an alkaline, putrid environment. To heal, a return to an acidic environment, exclusion of pathogenic alkaline influences of the internal environment and mucus is necessary.

When treating asthma, it is necessary to eat a lot of dried fruit, bread from sprouted grain or dried sprouts, stewed vegetables without butter. Such a diet together with urinotherapy and fasting brings 100% success.

Urinotherapy and venereal diseases

John Armstrong describes the cure of syphilis and psoriasis in a young man in a few weeks by the method of urine therapy and starvation. In any case, any treatment with the help of self-miracle drugs will not be successful if the internal environment does not shift from alkaline (putrefying) to acidic. Without cleansing the body, any medicine has only a temporary effect.

In the same way (drinking urine, massages, poultices, fasting), Armstrong cured in 26 days the inflammation of the testicles and the swelling that was the result of the infection.

Urine therapy and gangrene, non-healing wounds, bruises, burns, bites and similar cases

For simpler problems, it is enough to drink urine once a day, do a massage and compresses with evaporated quarter urine on the affected area. Acidification of a given part or the whole body brings positive results, leads to healing. Wounds heal better during the day.

Examplefrom John Armstrong's book: "The doctor insisted on amputating the leg two years ago. The patient received treatment, but her condition did not improve. She suffered from constipation, hemorrhoids, eczema, anemia, insomnia, general depression, her tongue hurt, the corners of her mouth cracked, gangrene in her leg was spreading. The woman was strong-willed and I easily convinced her to drink her own urine and up to 1.5 liters of cold water a day. After the first five days, the skin cracks started to disappear. At the end of the week, the colon and kidneys started to function normally, the hemorrhoids disappeared. After four months there was no sign of the gangrene. The swelling on the leg disappeared, new, healthy skin appeared on the affected areas. After fasting for a month on water and urine, the patient ate grapes, bananas and tomatoes in small quantities for the first week, freshly milked milk was added during the second week, and the woman began to eat a normal diet during the third week.

Comment and recommendation:Constipation poisoned the entire organism and shifted it towards an alkaline, putrid environment. This woman began to slowly decompose, anemia, eczema (trying to eliminate harmful substances) appeared. The colon was very badly affected by the putrefaction, and from there came the depression and problems in the mouth. It was also possible to start the treatment with enemas, with the aim of normalizing bowel activity and generally ridding the body of poisons, and continue with urine massages and drinking a quart of urine twice a day. Starvation must be started only after cleansing the main organs (intestines, liver, kidneys), then it is better tolerated.

Ending the hunger strike in our conditions:drink fresh carrot juice, decoctions of herbs with honey prepared from melt water, eat sprouted wheat, which will immediately supply the body with the necessary trace elements and vitamins in such a huge amount that is not found in all the foods listed by Armstrong. Later, switch to vegetables (steamed in winter), seasonal fruit, whole grain porridge, sprouted grain bread.

Armstrong's recommendation to drink water is important. During fasting, the amount of urine decreases considerably and it is then highly concentrated. This can be prevented by drinking a large amount of water, if possible melted, and by cleansing the body organs beforehand.

Example:"I damaged my liver after falling off a horse. The doctor said that they were all cracked and he was surprised that after 1 month of urine therapy I was healthy again."

Comment and recommendation:Urine that is absorbed through the digestive tract (especially during enemas) immediately enters the liver. The healing occurred mainly due to the fact that urine is a fluid saturated with gravitational energy, which quickly brought the damaged parts together. Its acidity supports biosynthesis, the salts and other substances contained in it form a kind of "cement" that quickly strengthens everything.

Example:"In two days, I healed a burn from an open fire on my hand (from the wrist to the elbow on the inside) with urine." Instead of blisters and a festering wound, a dry, dark cherry blank has formed. I used to wear the poultice all the time. Then I smeared the wound with urine. After five days, the swelling went down and the pain disappeared. It just itches a little.'

The Russian scientist F. Chaneja describescase of cure of tick-borne encephalitis:“The affected woman was injected with 2 ml of her own sterilized urine every two hours. For the second time the introduction of urine, the temperature dropped to 37 degrees, the next day even to 36.7, and the patient regained consciousness. In 24 hours, other symptoms of the disease also

weakened: headaches, pain in the joints, muscles, etc. After three days, a clinical recovery was noted. Later, this method was tested on volunteers in the treatment of angina, influenza, pneumonia, radiculitis, rheumatism, typhoid fever, dysentery, pancreatitis and other diseases with good therapeutic effects. Our experience, as in the literature, confirms:

- 1) Rapid temperature reduction.
- 2) Rapid pain relief.
- 3) Rapid reduction of intoxication.
- 4) Exclusion of complications and recurrences.
- 5) Overall faster recovery than with conventional methods of treatment.

Comment and recommendation: We already know that urine acts on the skin in 3 seconds (!) after its application and it can be introduced into the body with a simple massage, simply and physiologically: 20 ml in 2-3 minutes. To quickly reduce the temperature, we apply urine compresses to the pulse. We should achieve same effect as with intravenous introduction of urine, presented by Chaneja.

Example: "The boy was bitten by some kind of insect. The area became very swollen, red, itchy and eventually very painful. We included a poultice of fresh urine. In 40 minutes the pain disappeared. In 4 hours, all the symptoms of the bite also disappeared."

A. Maslenikov states two examples of people who were irradiated in the Chernobyl explosion: The affected man lost all his hair, began to be treated with urinotherapy - massages and compresses of his head with his own urine, drinking all urine within 1 month. The result: purification of the blood from the effects of radiation and new hair. In the second case, a girl was irradiated and a blood analysis showed cancer. She cured herself by drinking her own urine. She knew the method well, because even before the Chernobyl tragedy, she used urine to treat cancer of the larynx with metastases.

Comment and recommendation: In the first case, urine helped push radiation out of the body. A person was irradiated and this radiation was "written", encoded in his fluids. When urine was administered back into the body through the mouth or skin, the effects of radiation were mutually suppressed due to the interference effect. Difficulties such as hair loss were quickly removed with the help of biologically active substances contained in standing urine.

In the case of the girl, I only want to point out why the cancer returned. The diet that created the conditions for cancer is to blame. The girl cured it with urine therapy, but she continued to eat pathologically, and the explosion in Chernobyl was only the trigger mechanism that caused a new outbreak of cancer. Therefore, it is necessary to constantly monitor the diet to prevent alkalization of the organism. As part of prevention, it is also necessary to drink your own fresh urine every morning. 1 glass, i.e. 2 dcl, of fresh, warm urine is enough.

Urinotherapy and cosmetics

We have already mentioned why urine improves the condition of the skin and hair. It can be used instead of soap, because the ammonia and urea contained in it dissolve impurities and wash them away. Armstrong writes, for example, that the most expensive types of soap were produced and are still produced on the basis of salts and fats from the urine of cows that grazed on mountain pastures. Also, some expensive creams contain hormones from urine. At Maslenikov, we learn that it is very useful to have an evening instead of lotion smear the skin with fresh urine. First, with the help of a cotton ball, wash away the cosmetics and impurities, and then wet the skin with urine once more and let it act for 30-40 minutes. Then wash with cold water. Fingertips can be gently massaged by pulsing. The skin becomes smooth, the secretion of fat is regulated and no cream is needed. The skin acquires a healthy blush.

I know from my own experience that using quarter urine makes the skin even better while nourishing body, it gives him a huge amount of energy. Salts and its structure are concentrated in evaporated urine water is close to the fluid structure of a healthy, strong organism. We can also use cold activated urine. All hormones are preserved in it, and in addition, biologically active substances are formed in it. The urine of a child under 10 is also excellent. It is saturated with the development program that it passes on to us. We thus stimulate not only the skin, but the entire organism.

Example: "For eight years, my face was marred by red pimples. They didn't help me even in famous hospitals and salons. After massages with urine, the skin is clean."

Example: "As a teenager, I suffered from various pimples and boils, I was shy in front of my friends and I gradually developed an inferiority complex. I used different creams but it only made my condition worse. After the first urine compresses, even more blackheads broke out and I stopped using the compresses. But after a week, the blackheads started to disappear, so I went back to urine therapy again. This time I started drinking urine too. After two weeks, my face cleared up, it's free of blackheads."

Comment and recommendation: Urinotherapy is superior to all expensive creams and will quickly improve the condition of your skin. It is only necessary to change the way of eating. Pimples and other rash are a symptom excess of starches and proteins, your blood is polluted with them and these harmful substances and poisons come out through the skin. Various rashes and sores are the first symptoms of the beginning of the disease or more serious ones difficulties (as well as fatigue).

The combination of urinotherapy and starvation leads to the release of waste and harmful substances from the body and the encouragement of dying life forces, the human body is generally renewed.

Example from Armstrong's book "Living Water" tells of a sixty-year-old man who was paralyzed. After a stroke, he lost his memory and the doctors gave him only a few weeks to live. Armstrong prescribed a water and urine fast for 59 days, and after a two-week break with one meal a day, another 35 days of water and urine only fasting. (Of course, this can only be practiced in a hospital or sanatorium under strict medical supervision). The patient's memory and speech returned after only twenty days of treatment. The second part of the treatment was completed when the primary cause of the disease - arthritis - was removed. This patient's hair looked all gray and he grew a thick mane during treatment. In the second part of the hunger

strike, when urine was rubbed into the skin of the patient's head, his hair returned to its original color. By the way, many have grown new hair and regained their original color after rubbing the standing (old) urine.

Comment and recommendation:Old urine acts on hair bulbs with biologically active substances that are formed in it in the process of "dying" and also with the "burning" of ammonia that stimulates the skin heads. Fresh urine is a phosphorescent fluid with a yang character. Old, stale urine breaks down, smells, is cloudy and is therefore different. Hair growth is a yin process and therefore applying old urine to the scalp acts as a stimulator.

Head massage and poultices from it must be done in the first and third phase of the Moon, when the organism is it pulls and pulls everything in.In case of hair loss, the intake of urine internally and externally (on the scalp) makes the hair shiny, strong and dandruff free. Urine can be supplemented with rapeseed oil during massages and compresses.

Example:"My mother suffered from eczema for fifteen years. An old woman saw her damaged hands and advised her to wash them with urine. After a month of constantly rubbing the skin with urine, the eczema disappeared."

Comment and recommendation:You had to wash your hands with urine collected between 3 am and 3 pm. A woman should also change the diet that was the cause of eczema, otherwise the disease can return at any time.

The author disinfects his face after shaving with his own urine. There is no better remedy. After thorough cleansing of the body from harmful substances and poisons and after changing the diet, evaporated urine really smells like high-quality cologne.

Urinothrapy and rejuvenation of the organism

Many people, including the author, use this method simply to increase their vitality and strengthen their immunity, and very successfully. Further information is intended for those who want to push the age limit and feel much younger.

- "How old would you guess I am?" the farmer asked a passer-by.
- "About fifty."
- "I'm almost 90," said the farmer with satisfaction. "And that, with apologies, thanks to the urine." That farmer was John Armstrong.

Example:"Evaporated urine works great for compresses on the feet. I am 63 years old, I work a lot at the cottage and at the same time I have a lot of energy and lightness in my legs. I had a toothache for three days and my face began to swell. A quarter urine poultice removed both the swelling and the pain."

Example:"I am 64 years old. I started practicing urinothrapy on your advice. First, I gargled urine, washed my face and hair with it in the morning. For 2.5 months now, I have been regularly drinking 150 grams of urine in the morning, a medium portion. The results are amazing:

- 1) My hair started to grow again (I was already almost bald), its original black color returned

to me (the author also noticed the same changes in growth all over my body).

2) I lost 6 kg.

3) My appearance has become younger, I have fewer wrinkles despite losing weight, better skin color. 4) I have more energy and vitality, I would like to move mountains.

5) My memory improved, the ringing in my ears, which was previously a symptom of fatigue, disappeared. 6) My blood pressure was adjusted to 130/70.

7) The pain in the joints and the heaviness in the legs, which had troubled me all my life, disappeared (I suffered from joint rheumatism). Just a miracle.

Example: "I have been retired for 6 years. During my sedentary job, I developed a whole set of diseases: inflammation of the kidneys and lungs (several times), chronic bronchitis, erosion of the stomach and duodenum, frequent constipation, forced defecation, high blood pressure, irregular heart activity. I started drinking morning urine and doing enemas according to dr. Walker. I cleaned my colon of sludge stones. Then I started doing mini enemas with quarter urine. After the third enema, diseased tissue came out in the shape of slimy fringes. The chair adjusted. I can confirm that mini-enemas with evaporated urine are the best natural means for cleansing the fat intestines. When I drink my morning urine, I still get mucus when I cough and also from my nose. There are fewer and fewer of them. The state of health has improved significantly, the color of my face is pink, it is easier for me to breathe (I used to suffer from shortness of breath), my endurance and vigor are increasing."

I can confirm the loss of shortness of breath from my own experience. A few years ago I could hardly go out to my apartment on the fourth floor, today I run up the stairs like I was in my thirties, before I had to rest after a few shovelfuls of earth or sand, today I dump the whole compost in one go. Urinotherapy has a really wonderful and quick effect on improving breathing.

Example: "I have been applying urine to my feet and arms up to my shoulders for a week and have felt a marked improvement in my health."

Example about how the singer improved her voice and cured her throat: "In the morning I gargle fresh urine and swallow a few sips. My voice became stronger, its color improved. Incredibly."

Example: "I have personally experienced the effect of urine healing and fasting (two days a week for two months). When I returned from vacation, my family and friends were surprised: I lost 20 kg in two months, from 80 to 60."

Example: "My grandfather lived to be over a hundred years old and did not die, but died after being struck by lightning in the forest. My father said that my grandfather used urine whenever he felt sick and bathed in cold water in winter and summer."

Comment: It is better to shower with a contrast shower: warm, cold, warm, ice for only 2-5 seconds, depending on the body composition.

At the end of the book I present the experience of the doctors themselves: "I am a general

practitioner with ten years of experience and lately I have been trying to treat with non-traditional methods, including urine therapy. Here is one of the interesting cases: A patient, 45 years old, was treated for jaundice. Pancreatic cancer was detected during laparoscopy and the patient was sent home. I prescribed fasting for her for two weeks with massaging her whole body with urine and drinking urine. He still does not eat meat and milk, although he has a taste for salty and spicy. Three weeks after the end of the hunger strike, tests showed a normal state of health. The patient has returned to work, she is feeling well.'

Here I would like to emphasize again that the basis of successful healing is faith in the given method. If a person does not believe and starts consulting too much with relatives, acquaintances and doctors, then the result is nothing.

Example: Doctor dietitian with about three years of experience. He used the urinotherapy method for hundreds of his patients. According to him, it is the best treatment for all allergic diseases, bronchial asthma, severe pneumonia and exudative pleuritis. There are also good results in the treatment of chronic enterocolitis, bronchitis and pancreatitis. Rheumatoid arthritis in the initial stage is also well treated. All skin diseases - eczema, neurodermatitis and, of course, overweight and metabolic polyarthritis - are very well treated with urinotherapy. However, all patients must undergo a certain preparation before treatment, which includes cleaning the main organs (intestines, liver) and switching to a separate diet, mainly vegetarian with a significant proportion of raw food.

Example: "I started practicing urine therapy. I struggled with almost everything: painful liver, stomach, kidneys, constipation, sinus infections, colic, frequent headaches and asthma-type breathing problems. All that disappeared. There was a worsening of osteochondrosis, I started using white clay mixed with quarter urine for poultices. The result came almost immediately. I also got the gray out of my hair after I started rubbing steamed urine on my scalp. I have a few questions regarding this treatment:

Question no. 1: "I find it difficult to drink evaporated urine. I mix it with fresh in a ratio of 1:8, and yet after drinking it I have diarrhea after 10-15 minutes. After futile attempts, I stopped drinking. Couldn't I hurt myself?"

Answer: In any case. The urine acted as a strong salty laxative. The burning sensation will disappear if you switch to a non-salty, separate diet, mainly plant-based. You can then also drink evaporated urine, e.g. with honey.

Question no. 2: "If you can't drink female urine, won't it be harmful to use it in a massage or enema in a vaporized version?"

Answer: During evaporation, urine loses its specificity, hormones are destroyed. It becomes a sexless material saturated with salts and biologically active substances stored in "refractory" water crystals.

Question no. 3: "Is it possible to wash your nose with evaporated urine, drip it into your eyes and ears?"

Answer: If you switch to an unsalted, natural diet, with only occasional use of protein, then it is possible. Otherwise it will burn you like any saline solution.

Question no. 4: "Only the morning urine and only the middle part can be evaporated?"

Answer: All urine can be evaporated, even very old.

Question no. 5: "I use citric acid for more frequent urination. Is it right?"

Answer: Drink more ice melt water and urine and you will have enough urine. Do not use artificial means.

Question no. 6: "Can urine therapy be practiced by people who have been infected with the hepatitis B virus?"

Answer: Not only can they, but they should. Urine quickly destroys viruses. It was created by the author involuntarily final question whether urine therapy could also suppress HIV retroviruses which are related to hepatitis B retroviruses. In any case, cleansing the basic organs of your body, combined with occasional fasting and urine therapy, will strengthen your immune system so much that you don't have to worry about any infection.

At **Jiří Cingros** was born on May 1, 1941. As an interpreter and translator, he often stayed in Russia and Central Asia, from where he brought material for his first book on healing **A doctor to myself**, which was and still is very successful on the book market. After 1989, he worked as the first secretary for culture in the Czechoslovak Republic. embassy in Moscow. Here he became acquainted with another very widespread method in Russia and the East - urinothrapy, or urine treatment. He has been using this method together with cleansing steps on himself and his surroundings for several years with excellent results.

Recently, the author relocated for work to the capital of Yemen, Sana'a, i.e. to the late Middle Ages, minimal hygienic conditions, an altitude of 2,600 meters, where there is a third less oxygen and strong sunlight. Here too, urinothrapy helped him overcome the initial difficulties and dispel the superstition about the difficult transition of a European to tropical and other hostile lands. At the same time, he did not take a single medicine with him and has not recognized doctors for several years.
